**biological science scott freeman free: Darwin's Resolution: Evolution or Creation** Ernest L. Brannon, 2019-03-27 There are two worldviews about the source of life's diversity. Creation implies a Creator as the intelligent cause, and evolution purports a material cause. So how can we resolve this complex issue? In a thought-provoking discourse on the reconciliation of the controversy between evolution and Creation, Dr. Ernest Brannon, retired biology professor and director of the Sciphre Institute, presents both sides of the issue to provide a fair assessment for those challenged by life's origin and diversity. Within his treatise, Dr. Brannon summarizes information on the two worldviews about the diversity of life in order to demonstrate where there is common ground and to differentiate between the evidence and speculation between certainty and assumption. He also addresses reformation of the two worldviews, examines the scientific credibility of the Genesis account of Creation, and concludes with the essence of resolution. Darwin's Resolution: Evolution or Creation is an engaging treatise committed to reconciling the concept of evolution with faith in God through a comprehensive examination of scientific evidence.

**biological science scott freeman free: No Free Lunch** William A. Dembski, 2002 Darwin's greatest accomplishment was to show how life might be explained as the result of natural selection. But does Darwin's theory mean that life was unintended? William A. Dembski argues that it does not. In this book Dembski extends his theory of intelligent design. Building on his earlier work in The Design Inference (Cambridge, 1998), he defends that life must be the product of intelligent design. Critics of Dembski's work have argued that evolutionary algorithms show that life can be explained apart from intelligence. But by employing powerful recent results from the No Free Lunch Theory, Dembski addresses and decisively refutes such claims. As the leading proponent of intelligent design, Dembski reveals a designer capable of originating the complexity and specificity found throughout the cosmos. Scientists and theologians alike will find this book of interest as it brings the question of creation firmly into the realm of scientific debate.

**biological science scott freeman free: Science and Religious Anthropology** Wesley J. Wildman, 2016-04-01 Science and Religious Anthropology explores the convergence of the biological sciences, human sciences, and humanities around a spiritually evocative, naturalistic vision of human life. The disciplinary contributions are at different levels of complexity, from evolution of brains to existential longings, and from embodied sociality to ecosystem habitat. The resulting interpretation of the human condition supports some aspects of traditional theological thinking in the world's religious traditions while seriously challenging other aspects. Wesley Wildman draws out these implications for philosophical and religious anthropology and argues that the modern secular interpretation of humanity is most compatible with a religious form of naturalistic humanism. This book resists the reduction of meaning and value questions while taking scientific theories about human life with full seriousness. It argues for a religious interpretation of human beings as bodily creatures emerging within a natural environment that permits engagement with the valuational potentials of reality. This engagement promotes socially borne spiritual quests to realize and harmonize values in everything human beings do, from the forging of cultures to the crafting of personal convictions.

Gauger, Wayne Grudem, 2020-06-20 Winner of the ECPA Book of the Year Award for Bible Reference Works Many prominent Christians insist that the church must yield to contemporary evolutionary theory and therefore modify traditional biblical ideas about the creation of life. They argue that God used—albeit in an undetectable way—evolutionary mechanisms to produce all forms of life. Featuring two dozen highly credentialed scientists, philosophers, and theologians from Europe and North America, this volume contests this proposal, documenting evidential, logical, and theological problems with theistic evolution—making it the most comprehensive critique of theistic evolution yet produced. This book also investigates how the science standards have been translated into practice at the K-12 school district level, addressing issues around professional development, curriculum, assessment/evaluation, and accountability. The fundamental questions to be addressed are: (1) What is the response in terms of trends and patterns, of the educational system to the introduction of the national and state science standards since the late 1980's? and (2) What is the impact of the introduction of the science standards on teachers, classrooms, and students?

explanation and definition of life on Earth. Exhaustively researched and authoritative, *Chronology of the Evolution-Creationism Controversy* does what no other work does: it examines the conflict between the religious and scientific views of life on Earth in its full 3,000-year historical context, showing readers how this roiling debate has played out over the centuries. With hundreds of entries, *Chronology of the Evolution-Creationism Controversy* describes specific cultural, religious, and scientific events relevant to the evolution-creationism controversy from the first notions of creationism in ancient Egypt to the present. Within this historical approach, it identifies a number of recurring themes that have shaped the debate through the ages, including famous court cases, the recurrence of the intelligent design argument, disagreements over the age of the Earth, and the impact of technological advances on both the scientific and faith-based viewpoints. While approaching the subject globally throughout, the book's second half focuses on tensions between science and religious thought in the United States since the early 1900s.

**biological science scott freeman free:** *Downward Causation and the Neurobiology of Free Will* Nancey Murphy, George Ellis, Timothy O'Connor, 2009-09-23 How is free will possible in the light of the physical and chemical underpinnings of brain activity and recent neurobiological experiments? How can the emergence of complexity in hierarchical systems such as the brain, based at the lower levels in physical interactions, lead to something like genuine free will? The nature of our understanding of free will in the light of present-day neuroscience is becoming increasingly important because of remarkable discoveries on the topic being made by neuroscientists at the present time, on the one hand, and its crucial importance for the way we view ourselves as human beings, on the other. A key tool in understanding how free will may arise in this context is the idea of downward causation in complex systems, happening coterminously with bottom up causation, to form an integral whole. Top-down causation is usually neglected, and is therefore emphasized in the other part of the book's title. The concept is explored in depth, as are the ethical and legal implications of our understanding of free will. This book arises out of a workshop held in California in April of 2007, which was chaired by Dr. Christof Koch. It was unusual in terms of the breadth of people involved: they included physicists, neuroscientists, psychiatrists, philosophers, and theologians. This enabled the meeting, and hence the resulting book, to attain a rather broader perspective on the issue than is often attained at academic symposia. The book includes contributions by Sarah-Jayne Blakemore, George F. R. Ellis , Christopher D. Frith, Mark Hallett, David Hodgson, Owen D. Jones, Alicia Juarrero, J. A. Scott Kelso, Christof Koch, Hans Küng, Hakwan C. Lau, Dean Mobbs, Nancey Murphy, William Newsome, Timothy O'Connor, Sean A.. Spence, and Evan Thompson.
