Lipowski, 2013-11-11 Men born to distinction do not always develop it in their homeland. Sometimes trans plantation taps routes to hidden sources of concern for the embracing of novel con cepts or the clarification of man's behavior, illuminating this understanding in the lan guage of their adopted tongue. Such a one was Joseph Conrad, the Polish sailor whose new vision graced our literature long after his death in 1924. Such a one also is the author this book, who was born in that same year to carryon his country's vigor and resourcefulness in our time. He is numbered among those distinguished emigres whose contributions to our culture and progress emanated from the trials and tribulations of the political upheavals, persecutions, and wars of Europe. Like many others, he has brought sound traditions and learning from his native land to enhance the new and less developed of what was only recently a frontier land. Watersheds in world events impose themselves willy-nilly on our lives. One such time was 1946, when the author of this book left his native land and set out for the West. He spent six months in London learning English and then moved to Ireland, where he trained in medicine and also absorbed novel ways and a new culture, includ ing the writings of Swift and Joyce. This young medical graduate's potential was soon recognized by his teacher in neurology at Belfast, who with foresight predicted great accomplishment.

caplan health institute cost: Consultation In Community, School, And Organizational Practice William P. Erchul, 2019-01-15 Offering an historical perspective on the development of mental health consultation and community mental health, this book's intent is twofold. First, it describes and evaluates Harvard psychiatrist Gerald Caplan's innovative approach to consultation and related activities with respect to the current and future practice of clinical community, school and organizational psychology. Second, it pays tribute to Caplan whose ideas on prevention, crisis theory, support systems, community mental health, mental health consultation and collaboration and population-orientated psychiatry have influenced the practice of professional psychology and allied fields.; The text is divided into three sections: the first provides background information for the remainder of the volume; the second documents Caplan's influence on the way psychology has been applied in various settings; and the last considers his contribution's present and past influence. The text is aimed at consultant and practising psychologists, community and school psychology graduates and professionals involved with community mental health services.

Following the introduction, there are 21 chapters that examine the effects of various behavioral risk factors on population health, identify trends in life expectancy and quality of life, and suggest avenues for research in the behavioral and social science arenas to address problems affecting the U.S. population and populations in other developed and developing countries around the world. Undergraduate and graduate students pursuing coursework in health statistics, health population demographics, behavioral and social science, and health policy may be interested in this content. Additionally, policymakers, legislators, health educators, and scientific organizations around the world may also have an interest in this resource.

caplan health institute cost: Medical Benefit and the Human Lottery Duff R. Waring, 2008-01-18 Bioethicists, moral philosophers and social policy analysts have long debated about how we should decide who shall be saved with scarce, lifesaving resources when not all can be saved. It is often claimed that it is fairer to save younger persons and that age is an ethically relevant consideration in such tragic decisions. Medical benefit should be maximized and final selection

should aim to minimize the contaminating influence of chance. These claims are challenged by Duff R. Waring in *Medical Benefit and the Human Lottery*, one of the few books that attempts a sustained defence of random patient selection. This book combines ethics and political philosophy in its novel and strict egalitarian approach to patient selection for transplantable organs. Waring addresses the question of whether we should choose between lives on the basis of fair chances or best outcomes. He argues that final selection criteria should be based on fair chances that equalize opportunity as opposed to best outcomes. His defence of hardy egalitarianism aims to show that random selection by lottery can affirm both a common humanity and the equal value of lives. The notion of patient selection by lottery has not fared well in bioethics and has been regarded by some as a moral affront. Waring argues that a human selection lottery may be neither as crude nor as ethically anomalous as some have supposed. Indeed, it can reflect a familiar conception of equality as a political and moral ideal. This conception abstracts from many undeniable differences between patients and claims that scarce resources should be allocated on the principled assumption that each of their lives is equally worth saving. The book is also notable for its critiques of some recent utilitarian notions of medical benefit which can have an age-biased impact on elderly patients. Waring then argues against the leading, contemporary age-based approaches to patient selection. He explores the way random selection by lottery can affirm his egalitarian ethos in cases where eligible transplant candidates have each passed a threshold level of prospective medical benefit that has been set by democratic deliberation. Taming chance with a human lottery is defended as the most lucid means of ensuring equal opportunity. In so doing, Waring argues that we give the principle of equal concern and respect a radical expression: above a noncomparative threshold of medical benefit, each candidate can have an equal claim to life.
