

decolonizing environmentalism

decolonizing environmentalism is an emerging framework that seeks to address the historical and ongoing impacts of colonialism on environmental thought, policy, and practice. This approach challenges conventional environmentalism by centering Indigenous knowledge systems, recognizing the rights of marginalized communities, and confronting the power imbalances embedded in environmental governance. Decolonizing environmentalism emphasizes the importance of cultural diversity, social justice, and ecological sustainability as interconnected elements. It critiques the dominant Western paradigms that often disregard Indigenous stewardship and perpetuate environmental injustices. By integrating decolonial perspectives, environmental movements can become more inclusive and effective in tackling global ecological crises. This article explores the principles, challenges, and strategies involved in decolonizing environmentalism, providing a comprehensive overview of its significance and applications.

- Understanding Decolonizing Environmentalism
- The Historical Context of Environmental Colonialism
- Indigenous Knowledge and Environmental Stewardship
- Challenges in Implementing Decolonized Environmental Practices
- Strategies for Advancing Decolonizing Environmentalism

Understanding Decolonizing Environmentalism

Decolonizing environmentalism is a critical approach that seeks to dismantle colonial legacies within environmental discourse and practice. It recognizes that environmental issues cannot be separated from social, political, and historical contexts, especially those shaped by colonial domination. This framework promotes the inclusion of Indigenous worldviews, which often emphasize harmony with nature and reciprocal relationships with ecosystems. By challenging Eurocentric environmental models, decolonizing environmentalism advocates for more equitable and culturally sensitive policies that respect diverse knowledge systems and community rights.

Core Principles of Decolonizing Environmentalism

The core principles guiding decolonizing environmentalism include acknowledging historical injustices, respecting Indigenous sovereignty, and fostering community-led environmental governance. Emphasis is placed on:

- Revaluing Indigenous and local ecological knowledge
- Addressing environmental racism and inequality
- Promoting participatory decision-making processes
- Recognizing land rights and traditional territories

These principles work collectively to transform environmentalism into a more just and inclusive movement.

The Historical Context of Environmental Colonialism

The history of environmental colonialism reveals how colonial powers exploited natural resources and marginalized Indigenous peoples, leading to significant ecological degradation and cultural disruption. Colonial policies often imposed Western land management systems that ignored or suppressed Indigenous stewardship practices. This legacy continues to influence contemporary environmental challenges, including resource extraction, habitat destruction, and social exclusion.

Impact of Colonial Resource Exploitation

Colonial expansion prioritized resource extraction to fuel imperial economies, resulting in deforestation, mining, and monoculture agriculture. These activities frequently displaced Indigenous populations and undermined their sustainable land-use traditions. The environmental consequences were profound, leading to biodiversity loss and altered ecosystems that persist today.

Erasure of Indigenous Environmental Knowledge

Colonial regimes often dismissed Indigenous knowledge as primitive or irrelevant, marginalizing traditional ecological practices. This erasure not only harmed Indigenous cultures but also deprived environmental management of valuable insights. Decolonizing environmentalism seeks to restore and integrate these knowledge systems to enrich conservation and sustainability efforts.

Indigenous Knowledge and Environmental

Stewardship

Indigenous knowledge systems encompass a holistic understanding of ecosystems, emphasizing balance, reciprocity, and long-term stewardship. These systems are deeply rooted in cultural identities and spiritual relationships with the land. Recognizing and supporting Indigenous environmental stewardship is essential for effective conservation and resilience against climate change.

Characteristics of Indigenous Ecological Knowledge

Indigenous ecological knowledge is characterized by:

- Intergenerational transmission through oral traditions and practices
- A focus on biodiversity preservation and ecosystem health
- Adaptive management based on close observation and experience
- Integration of cultural and spiritual values in environmental relationships

Role in Biodiversity Conservation

Numerous studies highlight that Indigenous-managed lands often maintain higher biodiversity levels than protected areas managed solely by governments. Indigenous stewardship contributes to habitat protection, sustainable resource use, and the maintenance of ecological balance. Incorporating this knowledge into broader environmental frameworks enhances conservation outcomes.

Challenges in Implementing Decolonized Environmental Practices

Despite the growing recognition of decolonizing environmentalism, significant challenges impede its full implementation. These obstacles include systemic power imbalances, legal barriers, and institutional resistance within environmental agencies and governments. Furthermore, the complexity of integrating diverse knowledge systems presents practical difficulties.

Institutional and Legal Barriers

Many legal frameworks do not adequately recognize Indigenous land rights or

self-determination, limiting opportunities for Indigenous-led environmental management. Bureaucratic processes and centralized governance structures often exclude Indigenous voices, perpetuating colonial dynamics.

Knowledge Integration Difficulties

Bridging Indigenous knowledge with Western scientific approaches requires careful negotiation to avoid appropriation or misinterpretation. Differences in epistemologies and methodologies can create misunderstandings and hinder collaboration.

Socioeconomic and Political Constraints

Indigenous communities frequently face economic marginalization and political disenfranchisement, reducing their capacity to engage in environmental governance. External pressures from extractive industries and development projects further threaten their lands and autonomy.

Strategies for Advancing Decolonizing Environmentalism

To promote decolonizing environmentalism effectively, various strategies have been proposed and implemented worldwide. These approaches prioritize Indigenous leadership, legal reform, education, and collaborative governance models to create more equitable and sustainable environmental outcomes.

Legal Recognition and Land Rights

Securing formal recognition of Indigenous land tenure and resource rights is fundamental. Legal frameworks that support Indigenous sovereignty enable communities to manage their territories according to traditional practices, fostering environmental stewardship and social justice.

Community-Led Environmental Governance

Empowering Indigenous and local communities to lead environmental decision-making ensures that policies are culturally appropriate and ecologically sound. Collaborative management arrangements can facilitate shared responsibilities between governments and Indigenous groups.

Education and Capacity Building

Raising awareness about the importance of decolonizing environmentalism through education promotes respect for Indigenous knowledge and histories. Capacity-building initiatives strengthen community skills in environmental monitoring, advocacy, and policy engagement.

Integrative Research and Knowledge Exchange

Fostering respectful partnerships between Indigenous knowledge holders and scientists can enhance environmental research and management. Co-production of knowledge encourages mutual learning and the development of innovative conservation solutions.

1. Recognize Indigenous sovereignty and land rights
2. Promote participatory and inclusive environmental governance
3. Integrate Indigenous ecological knowledge with scientific methods
4. Address environmental injustices and systemic inequalities
5. Support education and capacity building within Indigenous communities

Frequently Asked Questions

What does 'decolonizing environmentalism' mean?

Decolonizing environmentalism refers to rethinking and reshaping environmental movements and policies to address and dismantle the legacy of colonialism, ensuring Indigenous knowledge, rights, and perspectives are central to environmental protection and sustainability efforts.

Why is decolonizing environmentalism important?

It is important because traditional environmentalism has often marginalized Indigenous peoples and their knowledge, leading to exclusion from decision-making and perpetuating environmental injustices rooted in colonial histories.

How can Indigenous knowledge contribute to

decolonizing environmentalism?

Indigenous knowledge offers holistic and place-based understanding of ecosystems, sustainable resource management practices, and long-term stewardship approaches that can enrich and improve environmental conservation efforts.

What are some challenges faced in decolonizing environmentalism?

Challenges include overcoming entrenched colonial power structures, addressing systemic racism, ensuring genuine participation of Indigenous communities, and reconciling differing worldviews and values about nature and land.

How does decolonizing environmentalism impact policy-making?

It promotes inclusive policies that recognize Indigenous land rights, integrate traditional ecological knowledge, and prioritize social justice, leading to more equitable and effective environmental governance.

Can decolonizing environmentalism help combat climate change?

Yes, by incorporating Indigenous stewardship practices and respecting Indigenous territories, which are often biodiversity hotspots and carbon sinks, decolonizing environmentalism can enhance climate resilience and mitigation strategies.

What role do Indigenous communities play in decolonizing environmentalism?

Indigenous communities are key leaders and knowledge holders in decolonizing environmentalism, advocating for their rights, managing their lands sustainably, and guiding environmental practices rooted in their cultural values.

How can non-Indigenous environmentalists support decolonizing environmentalism?

Non-Indigenous environmentalists can support by educating themselves about colonial histories, amplifying Indigenous voices, collaborating respectfully, advocating for Indigenous rights, and challenging exclusionary practices within the environmental movement.

Additional Resources

1. *Braiding Sweetgrass: Indigenous Wisdom, Scientific Knowledge, and the Teachings of Plants*

Written by Robin Wall Kimmerer, this book blends indigenous knowledge with scientific understanding to explore the relationship between people and the natural world. Kimmerer, a member of the Citizen Potawatomi Nation and a trained botanist, offers insights into how traditional ecological knowledge can inform and enrich contemporary environmentalism. The book emphasizes reciprocity, gratitude, and the interconnectedness of all living things, challenging dominant Western environmental narratives.

2. *Decolonizing Nature: Strategies for Conservation in a Postcolonial Era*

Edited by William M. Adams and Martin Mulligan, this collection examines how conservation efforts have often been entangled with colonial histories and power dynamics. The contributors argue for a rethinking of environmentalism that centers indigenous rights, local knowledge, and social justice. The book provides case studies and theoretical frameworks for creating more equitable and effective conservation practices.

3. *Red Alert! Saving the Planet with Indigenous Knowledge*

By Ronald Wright, this book highlights the critical role indigenous peoples play in protecting biodiversity and combating climate change. Wright critiques mainstream environmentalism for overlooking indigenous voices and advocates for the integration of traditional ecological knowledge into global environmental policies. Through compelling narratives, the book calls for a decolonized approach to environmental stewardship.

4. *All Our Relations: Native Struggles for Land and Life*

Edited by Winona LaDuke and Margaret Archuleta, this anthology collects essays and stories from indigenous activists and scholars about their ongoing efforts to defend land and natural resources. The book foregrounds the spiritual and cultural connections indigenous communities have with the environment. It stresses the importance of sovereignty and self-determination in environmental justice movements.

5. *Environmental Justice and Indigenous Environmental Movements*

Edited by Melissa Checker and Christopher R. Warren, this volume explores the intersections of environmental justice and indigenous activism. It discusses how indigenous communities confront environmental racism and advocate for sustainable resource management. The book also examines policy implications and highlights grassroots movements working toward decolonized environmental governance.

6. *The Other Slavery: The Uncovered Story of Indian Enslavement in America*

By Andrés Bernal, while not exclusively about environmentalism, this book provides crucial historical context about the exploitation of indigenous peoples and lands. Bernal reveals how indigenous slavery facilitated environmental degradation and resource extraction during colonial times. Understanding this history is fundamental to decolonizing environmental narratives and practices.

7. Unsettling the Colonial Places and Spaces of Environmental Justice

Edited by Jasmine M. Harris and Jodi A. Byrd, this book interrogates the colonial foundations of environmental injustices. It critiques dominant environmental justice frameworks and proposes decolonial approaches that honor indigenous sovereignty and knowledge systems. The contributors offer interdisciplinary perspectives and case studies to reimagine environmentalism beyond colonial legacies.

8. Indigenous Environmental Justice: Anti-Colonial Struggles for Land and Life

By Devon A. Mihesuah and Angela Cavender Wilson, this book delves into indigenous perspectives on environmental justice. It highlights the challenges indigenous communities face due to colonial policies and industrial development. The authors advocate for recognizing indigenous legal systems and knowledge as essential to achieving true environmental justice.

9. Nature and Power: A Global History of the Environment

By Joachim Radkau, this comprehensive history traces the complex relationships between humans and nature across different cultures and epochs. Although global in scope, the book addresses how colonialism shaped environmental exploitation and governance. It encourages readers to reconsider environmental history through a decolonial lens, emphasizing the need for pluralistic approaches to environmentalism.

decolonizing environmentalism: Decolonizing Environmentalism Prakash Kashwan, Aseem Hasnain, 2024-12-26 We live in a moment rife with mixed emotions-existential anxieties about catastrophic climate change, presumptuous confidence in planet-hacking geoengineering technologies, and hopefulness of youth climate activism. Decolonizing Environmentalism helps us navigate these emotions and reimagine our approach to environmental stewardship. The authors cast a critical eye on wealthy and influential environmental groups that committed to anti-racist strategies in the wake of the racial awakening of 2020. Yet, they continue to embrace false solutions like carbon markets and biodiversity offsets, which carry deeply racialized consequences. By tracing the roots of these misplaced priorities to detrimental modernity steeped in colonialism and capitalism, the authors call for transformational changes in human-nature relationships. They distill lessons from the divestment movement, which has questioned the fossil fuel industry's moral standing, and food sovereignty activists, who have mobilized global civil society to hold agribusiness corporations accountable. Amidst calls for apocalyptic optimism, Kashwan and Hasnain offer a radical vision grounded in intersectional ecofeminism, Indigenous sovereignty, and strategies honed in the trenches of transnational environmentalism. In these extraordinary times, Decolonizing Environmentalism invites readers to embark on a transformative journey to embrace anti-racist,

emancipatory, and regenerative approaches to environmentalism.

decolonizing environmentalism: Handbook of Anti-Environmentalism Tindall, David, Stoddart, Mark C. J., Dunlap, Riley E., 2022-03-22 This thought-provoking Handbook provides a theoretical overview of the wide variety of anti-environmentalisms and offers an integrative research agenda for future research on the topic. Probing the ways in which groups have organized to oppose environmental movements and pro-environmental policies in recent decades, it examines those involved in these countermovements and studies their motivations and support systems. This Handbook explores core topics in the field, including contestation over climate change, wind power, mining, forestry, food sovereignty, oil and gas pipelines and population issues.

decolonizing environmentalism: Transformative Sustainability Education Elizabeth A. Lange, 2023-03-28 This book lays out the principles and practices of transformative sustainability education using a relational way of thinking and being. Elizabeth A. Lange advocates for a new approach to environmental and sustainability education, that of rethinking the Western way of knowing and being and engendering a frank discussion about the societal elements that are generating climate, environmental, economic, and social issues. Highlighting the importance of Indigenous and life-giving cultures, the book covers educational theory, transformation stories of adult learners, social and economic critique, and visions of changemakers. Each chapter also has a strong pedagogical element, with entry points for learners and embodied practices and examples of taking action at micro/meso/macro levels woven throughout. Overall, this book enacts a relational approach to transformative sustainability education that draws from post humanist theory, process thought, relational ontology, decolonization theory, Indigenous philosophy, and a spirituality that builds a sense of sacred towards the living world. Written in an imaginative, storytelling manner, this book will be a great resource for formal and nonformal environmental and sustainability educators.

decolonizing environmentalism: Legacies of Enslavement in the French Republic Nicola Frith, 2025-05-06 Legacies of Enslavement in the French Republic explores the complex dynamics between social movements invested in remembering and addressing the legacies of African enslavement and the French State. Exploring 25 years of activism, from the build-up to the 150th anniversary of the Abolition Act (1998) through to the present day, the book: Investigates strategies used by the French State to delink the recognition of France's enslaving past from contemporary issues with anti-Black racism and reparation. Asks why, in the wake of the first Taubira law that recognized slavery as a crime against humanity (2001), the state has legitimized the work of certain activist groups, while delegitimizing others. Uses critical race theory and decolonial theory to examine the extent to which the State's approach to recognizing its past is structured by a 'colonial matrix of power'. Highlights and contests political and media misconceptions about reparations by showcasing the work of grassroots activists operating in France, the Caribbean and the Indian Ocean. In doing so, Legacies of Enslavement showcases some of the key shifts that have taken place in the recent history of activist work operating in parallel with the successive metamorphoses of the French state as it responds to social and political pressure to recognize and repair the nation's enslaving past and its racial legacies today.

decolonizing environmentalism: Consumption, Status, and Sustainability Paul Roscoe, Cindy Isenhour, 2021-08-12 Focuses information from across time and culture on the relationships among status competition, consumption, and planetary sustainability.

decolonizing environmentalism: Freire and Environmentalism Greg William Misiaszek, 2023-05-18 Building on Paulo Freire's educational theory and critical pedagogy movements, this book provides a short and accessible introduction to ecopedagogy – Freirean environmental teaching and environmentalism overall. Ecopedagogy offers a political and educational vision that strives for a critical, culturally relevant forms of knowledge centred on sustainability for securing the future of our planet, ending all forms of oppression, and ensuring peace globally. Using examples from around the globe, Misiaszek shows how different populations (e.g., gender, race, ethnicity) are affected in unbalanced ways by ongoing environmental destruction and argues that these systematic socio-environmental inequalities are ignored in much of environmental teaching. He argues through

reinventing Freire's work that environmental justice is inseparable to social justice and should be seen as part of wider debates around, for example, globalization, development, citizenship, racism, feminism, neo/colonialization, and linguistics. The book calls for global and local approaches to understanding socio-environmental issues beyond anthropocentric models (beyond humans) and epistemologies of the North (e.g., Western knowledges). Written for anyone with an interest in environmentalism this book offers new ways of thinking and teaching about environmental crises we are living through.

decolonizing environmentalism: *Reconciliation in a Michigan Watershed* Gail Gunst Heffner, David P. Warners, 2024-05-01 Like many American urban waterways, Ken-O-Sha has been in decline for nearly two hundred years. Once life-supporting, the waterway now known as Plaster Creek is life-threatening. In this provocative book, scholars and environmentalists Gail Gunst Heffner and David P. Warners explore the watershed's ecological, social, spiritual, and economic history to determine what caused the damage, and describe more recent efforts to repair it. Heffner and Warners provide insight into the concept of reconciliation ecology, as enacted through their group, Plaster Creek Stewards, who together with community partners refuse to accept the status quo of a contaminated creek unfit for children's play, severely reduced biological diversity, and environmental injustices. Their work reveals that reconciliation ecology needs to focus not only on repairing damaged human-nature relationships, but also on the relationships between people groups, including Indigenous North Americans and the descendants of European colonizers.

decolonizing environmentalism: *The Green Ghost* Chad Weidner, 2016-03-16 Weidner uncovers the ecological context of Burrough's literary texts. Pushing the boundaries of ecocritical theory and practice, Weidner provides a fresh perspective on Burroughs and suggests new theoretical and methodological approaches to understanding the work of other Beat writers.

decolonizing environmentalism: *Ecological Solidarity and the Kurdish Freedom Movement* Stephen E. Hunt, 2021-10-11 *Ecological Solidarity and the Kurdish Freedom Movement: Thought, Practice, Challenges, and Opportunities* is a pioneering text that examines the ideas about social ecology and communalism behind the evolving political structures in the Kurdish region. The collection evaluates practical green projects, including the Mesopotamian Ecology Movement, Jinwar women's eco-village, food sovereignty in a solidarity economy, environmental defenders in Iranian Kurdistan, and Make Rojava Green Again. Contributors also critically reflect on such contested themes as Alevi nature beliefs, anti-dam demonstrations, human-rights law and climate change, the Gezi Park protests, and forest fires. Throughout this volume, the contributors consider the formidable challenges to the Kurdish initiatives, such as state repression, damaged infrastructure, and oil dependency. Nevertheless, contributors assert that the West has much to learn from the Kurdish ecological paradigm, which offers insight into social movement debates about development and decolonization.

decolonizing environmentalism: *I Will Live for Both of Us* Joan Scottie, Warren Bernauer, Jack Hicks, 2022-11-11 Born at a traditional Inuit camp in what is now Nunavut, Joan Scottie has spent decades protecting the Inuit hunting way of life, most famously with her long battle against the uranium mining industry. Twice, Scottie and her community of Baker Lake successfully stopped a proposed uranium mine. Working with geographer Warren Bernauer and social scientist Jack Hicks, Scottie here tells the history of her community's decades-long fight against uranium mining. Scottie's *I Will Live for Both of Us* is a reflection on recent political and environmental history and a call for a future in which Inuit traditional laws and values are respected and upheld. Drawing on Scottie's rich and storied life, together with document research by Bernauer and Hicks, their book brings the perspective of a hunter, Elder, grandmother, and community organizer to bear on important political developments and conflicts in the Canadian Arctic since the Second World War. In addition to telling the story of her community's struggle against the uranium industry, *I Will Live for Both of Us* discusses gender relations in traditional Inuit camps, the emotional dimensions of colonial oppression, Inuit experiences with residential schools, the politics of gold mining, and Inuit traditional laws regarding the land and animals. A collaboration between three committed activists, I

Will Live for Both of Us provides key insights into Inuit history, Indigenous politics, resource management, and the nuclear industry.

decolonizing environmentalism: Tarangire: Human-Wildlife Coexistence in a Fragmented Ecosystem Christian Kiffner, Monica L. Bond, Derek E. Lee, 2022-04-22 This edited volume summarizes multidisciplinary work on wildlife conservation in the Tarangire Ecosystem of northern Tanzania. By drawing together human-centered, wildlife-centered, and interdisciplinary research, this book contributes to furthering our understanding of the often complex mechanisms underlying human-wildlife interactions in dynamic landscapes. By synthesizing the wealth of knowledge generated by anthropologists, ecologists, conservationists, entrepreneurs, geographers, sociologists, and zoologists over the last decades, this book also highlights practicable and locally adapted solutions for shaping human-wildlife interactions towards coexistence. Readers will discover the reciprocal and often unexpected direct and indirect dynamics between people and wildlife. While boundaries (e.g. between people and wildlife, between protected and un-protected areas, and between different groups of people) are a common theme throughout the different chapters, this book stresses the commonalities, links, and synergies between seemingly disparate disciplines, opinions, and conservation approaches. The chapters are divided into clear sections, such as the human dimension, the wildlife dimension and human-wildlife interactions, representing a detailed summary of anthropological, ecological, and interdisciplinary research projects that have been conducted in the Tarangire Ecosystem over the last decades. Beyond, this work contributes to the debate about land-sharing versus land-sparing and provides an in-depth case study for understanding the complexities associated with human-wildlife coexistence in one of the few remaining ecosystems that supports migratory populations of large mammals. The topic of this book is particularly relevant for students, scholars, and practitioners who are interested in reconciling the needs of human populations with those of the environment in general and large mammal populations in particular.

decolonizing environmentalism: Teaching the Literature of Climate Change Debra J. Rosenthal, 2024-04-26 Over the past several decades, writers such as Margaret Atwood, Paolo Bacigalupi, Octavia E. Butler, and Kathy Jetñil-Kijiner have explored climate change through literature, reflecting current anxieties about humans' impact on the planet. Emphasizing the importance of interdisciplinarity, this volume embraces literature as a means to cultivate students' understanding of the ongoing climate crisis, ethics in times of disaster, and the intrinsic intersectionality of environmental issues. Contributors discuss speculative climate futures, the Anthropocene, postcolonialism, climate anxiety, and the usefulness of storytelling in engaging with catastrophe. The essays offer approaches to teaching interdisciplinary and cross-listed courses, including strategies for team-teaching across disciplines and for building connections between humanities majors and STEM majors. The volume concludes with essays that explore ways to address grief and to contemplate a hopeful future in the face of apocalyptic predictions.

decolonizing environmentalism: Community, Psychology and Climate Justice Brendon R. Barnes, Maria Fernandes-Jesus, Carlie D. Trott, Garret Barnwell, 2025-09-26 This book uniquely focuses on community psychology and climate justice. Climate change in general has been an area of increasing interest to psychologists in recent years, particularly in its cognitive, perceptual, and affective aspects. Because communities are often on the forefront of resistance to the deleterious effects of climate change, psychologists have become aware of the ramifications of large scale resource developments, toxic contamination, and dispossession, to name a few. The current conceptualizations and approaches to climate change, however, are not adequate to today's needs. Addressing this gap, this volume emphasize the politics of social justice, going beyond internal psychological variables. it explores the legacy of colonialism, highlights the needs of indigenous peoples, and takes an expansive interdisciplinary stance including critical theory, queer theory, feminism.

decolonizing environmentalism: Indigenous, Modern and Postcolonial Relations to Nature Angela Roothaan, 2019-05-23 Indigenous, Modern and Postcolonial Relations to Nature

contributes to the young field of intercultural philosophy by introducing the perspective of critical and postcolonial thinkers who have focused on systematic racism, power relations and the intersection of cultural identity and political struggle. Angela Roothaan discusses how initiatives to tackle environmental problems cross-nationally are often challenged by economic growth processes in postcolonial nations and further complicated by fights for land rights and self-determination of indigenous peoples. For these peoples, survival requires countering the scramble for resources and clashing with environmental organizations that aim to bring their lands under their own control. The author explores the epistemological and ontological clashes behind these problems. This volume brings more awareness of what structurally obstructs open exchange in philosophy world-wide, and shows that with respect to nature, we should first negotiate what the environment is to us humans, beyond cultural differences. It demonstrates how a globalizing philosophical discourse can fully include epistemological claims of spirit ontologies, while critically investigating the exclusive claim to knowledge of modern science and philosophy. This book will be of great interest to students and scholars of environmental philosophy, cultural anthropology, intercultural philosophy and postcolonial and critical theory.

decolonizing environmentalism: *Rooted and Grounded* Ryan D. Harker, Janeen Bertsche Johnson, 2016-01-28 For many of us, the connection between the ecological crisis and humanity's detachment from the land is becoming increasingly clear. In biblical terms, adam (humanity) has severed itself from the adamah (soil), and we (creation) are reaping the consequences. This collection of essays, and the conference from which it took shape, calls the church to root itself more deeply in the agrarian biblical text and ecclesial tradition in order to remember and freshly imagine ways of living on and with the land that are restorative, reconciling, and faithful to the triune God's invitation to new life in Christ. When we listen attentively to and patiently learn from the biblical text, church history, and theology, the land itself can become a conversation partner, and we are summoned to recognize that the gospel is reserved not simply for humanity, but for the whole of creation.

decolonizing environmentalism: Environmental Justice Brendan Coolsaet, 2020-06-15 *Environmental Justice: Key Issues* is the first textbook to offer a comprehensive and accessible overview of environmental justice, one of the most dynamic fields in environmental politics scholarship. The rapidly growing body of research in this area has brought about a proliferation of approaches; as such, the breadth and depth of the field can sometimes be a barrier for aspiring environmental justice students and scholars. This book therefore is unique for its accessible style and innovative approach to exploring environmental justice. Written by leading international experts from a variety of professional, geographic, ethnic, and disciplinary backgrounds, its chapters combine authoritative commentary with real-life cases. Organised into four parts—approaches, issues, actors and future directions—the chapters help the reader to understand the foundations of the field, including the principal concepts, debates, and historical milestones. This volume also features sections with learning outcomes, follow-up questions, references for further reading and vivid photographs to make it a useful teaching and learning tool. *Environmental Justice: Key Issues* is the ideal toolkit for junior researchers, graduate students, upper-level undergraduates, and anyone in need of a comprehensive introductory textbook on environmental justice.

decolonizing environmentalism: The Routledge Companion to the Environmental Humanities Ursula Heise, Jon Christensen, Michelle Niemann, 2017-01-06 *The Routledge Companion to the Environmental Humanities* provides a comprehensive, transnational, and interdisciplinary map to the field, offering a broad overview of its founding principles while providing insight into exciting new directions for future scholarship. Articulating the significance of humanistic perspectives for our collective social engagement with ecological crises, the volume explores the potential of the environmental humanities for organizing humanistic research, opening up new forms of interdisciplinarity, and shaping public debate and policies on environmental issues. Sections cover: The Anthropocene and the Domestication of Earth Posthumanism and Multispecies Communities Inequality and Environmental Justice Decline and Resilience: Environmental Narratives, History, and

Memory Environmental Arts, Media, and Technologies The State of the Environmental Humanities The first of its kind, this companion covers essential issues and themes, necessarily crossing disciplines within the humanities and with the social and natural sciences. Exploring how the environmental humanities contribute to policy and action concerning some of the key intellectual, social, and environmental challenges of our times, the chapters offer an ideal guide to this rapidly developing field.

decolonizing environmentalism: *The Art of Protest* T. V. Reed, 2019-01-22 A second edition of the classic introduction to arts in social movements, fully updated and now including Black Lives Matter, Occupy Wall Street, and new digital and social media forms of cultural resistance *The Art of Protest*, first published in 2006, was hailed as an “essential” introduction to progressive social movements in the United States and praised for its “fluid writing style” and “well-informed and insightful” contribution (Choice Magazine). Now thoroughly revised and updated, this new edition of T. V. Reed’s acclaimed work offers engaging accounts of ten key progressive movements in postwar America, from the African American struggle for civil rights beginning in the 1950s to Occupy Wall Street and Black Lives Matter in the twenty-first century. Reed focuses on the artistic activities of these movements as a lively way to frame progressive social change and its cultural legacies: civil rights freedom songs, the street drama of the Black Panthers, revolutionary murals of the Chicano movement, poetry in women’s movements, the American Indian Movement’s use of film and video, anti-apartheid rock music, ACT UP’s visual art, digital arts in #Occupy, Black Lives Matter rap videos, and more. Through the kaleidoscopic lens of artistic expression, Reed reveals how activism profoundly shapes popular cultural forms. For students and scholars of social change and those seeking to counter reactionary efforts to turn back the clock on social equality and justice, the new edition of *The Art of Protest* will be both informative and inspiring.

decolonizing environmentalism: *The Inuit World* Pamela Stern, 2021-11-23 *The Inuit World* is a robust and holistic reference source to contemporary Inuit life from the intimate world of the household to the global stage. Organized around the themes of physical worlds, moral, spiritual and intellectual worlds, intimate and everyday worlds, and social and political worlds, this book includes ethnographically rich contributions from a range of scholars, including Inuit and other Indigenous authors. The book considers regional, social, and cultural differences as well as the shared histories and common cultural practices that allow us to recognize Inuit as a single, distinct Indigenous people. The chapters demonstrate both the historical continuity of Inuit culture and the dynamic ways that Inuit people have responded to changing social, environmental, political, and economic conditions. Chapter topics include ancestral landscapes, tourism and archaeology, resource extraction and climate change, environmental activism, and women’s leadership. This book is an invaluable resource for students and researchers in anthropology, Indigenous studies, and Arctic studies and those in related fields including geography, history, sociology, political science, and education.

decolonizing environmentalism: *Teaching Postcolonial Environmental Literature and Media* Cajetan Iheka, 2021-12-28 Provides strategies for teaching postcolonial environmental literature by writers from the Global South and indigenous peoples. Topics and approaches include environmental justice, queer ecofeminism, animal studies, migration, anticolonialism, petrofiction, sea level rise, environmental humanities, and environmental justice organizations. Works from Africa, Latin America, East Asia, and the Caribbean are discussed.
