dr doe game story: A Soldier's Letters to Charming Nellie Joseph Benjamin Polley, 2008 One of the most cited collections of letters by a Civil War soldier, A Soldier's Letters to Charming Nellie was originally published in 1908. A unit history of the 4th Texas Infantry in epistolary form, Joseph B. Polley's letters make available the correspondence of a soldier who participated in virtually all military action in the Eastern Theater. Polley was an unusually gifted writer, with a talent for satire

and humor unmatched by most Civil War diarists. While the collection met with an enthusiastic audience upon its appearance, it has not been without controversy. Scholars have debated some of the letters' authenticity; many appeared in the Confederate Veteran long after the end of the war, and questions remain about whether they were all written during the Civil War or if some were composed at the turn of the century or later. In this definitive, annotated edition, Richard B. McCaslin has prepared new transcriptions of the letters and compared variant versions of them, resolving many of the historiographical puzzles that surround this wonderful collection. McCaslin also includes an analysis of when, how, and why Polley wrote the letters. The volume will aid historians interested in the activities of the Army of Northern Virginia and its commanders, and especially students of Hood's Texas Brigade.

dr doe game story: Atomic Days Joshua Frank, 2022-10-11 Once home to the United States's largest plutonium production site, the Hanford Nuclear Reservation in Washington state is laced with 56 million gallons of radioactive waste. The threat of an explosive accident at Hanford is all too real—an event that could be more catastrophic than Chernobyl. The EPA designated Hanford the most toxic place in America; it is also the most expensive environmental clean-up job the world has ever seen, with a \$677 billion price tag that keeps growing. Huge underground tanks, well past their life expectancy and full of boiling radioactive gunk, are leaking, infecting groundwater supplies and threatening the Columbia River. Whistleblowers, worried that the worst is ahead, are now speaking out, begging to be heard and hoping their pleas help bring attention to the dire situation at Hanford. Aside from a few feisty community groups and handful of Indigenous activists, there is very little public scrutiny of the clean-up process, which is managed by the Department of Energy and carried out by contractors with shoddy track records, like Bechtel. In the context of renewed support for atomic power as a means of combating climate change, Atomic Days provides a much-needed refutation of the myths of nuclear technology—from weapons to electricity—and shines a spotlight on the ravages of Hanford and its threat to communities, workers and the global environment.
