### Multiple-Choice Question Example

**Question:** Which of the following elements has the highest electronegativity?

- A) Sodium (Na)
- B) Chlorine (Cl)
- C) Magnesium (Mg)
- D) Calcium (Ca)

**Answer Technique:** Recall periodic trends; electronegativity increases across a period and decreases down a group. Chlorine (Cl), being a halogen, has the highest electronegativity among the options.

## Stoichiometry Problem Example

**Question:** How many grams of water are produced when 4 grams of hydrogen gas react with excess oxygen?

**Answer Technique:** Convert grams of  $\text{H}_2$  to moles, use mole ratio to find moles of  $\text{H}_2\text{O}$ , then convert to grams. This stepwise method ensures accuracy.

## Short Answer Question Example

**Question:** Explain why ionic compounds generally have higher melting points than covalent compounds.

**Answer Technique:** Focus on the strength of electrostatic forces in ionic bonds compared to weaker intermolecular forces in covalent compounds when constructing a clear, concise response.

## Best Practices for Answering Questions

1. Read each question carefully and identify key information.
2. Plan calculations or responses before writing to avoid errors.
3. Use proper chemical terminology and notation.
