discovery education assignment answer key: The Routledge Companion to Accounting Education Richard M.S. Wilson, 2014-04-29 Many enquiries into the state of accounting education/training, undertaken in several countries over the past 40 years, have warned that it must change if it is to be made more relevant to students, to the accounting profession, and to stakeholders in the wider community. This book's over-riding aim is to provide a comprehensive and authoritative source of reference which defines the domain of accounting education/training, and which provides a critical overview of the state of this domain (including emerging and cutting edge issues) as a foundation for facilitating improved accounting education/training scholarship and research in order to enhance the educational base of accounting practice. The Routledge Companion to Accounting Education highlights the key drivers of change - whether in the field of practice on the one hand (e.g. increased regulation, globalisation, risk, and complexity), or from developments in the academy on the other (e.g. pressures to embed technology within the classroom, or to meet accreditation criteria) on the other. Thirty chapters, written by leading scholars from around the world, are grouped into seven themed sections which focus on different facets of their respective themes - including student, curriculum, pedagogic, and assessment considerations.

discovery education assignment answer key: Theoretical Principles of Distance

Education Desmond Keegan, 2005-08-15 According to UNESCO statistics, 10 million of the world's 600 million students study at a distance. Theoretical Principles of Distance Education seeks to lay solid foundations for the education of these students and for the structures within which they study. As a more industrialised form of education provision, distance education is well adapted to the use of new communication technologies, and brings to education many of the strengths and dangers of post-industrialism. The central focus of the study of distance education is the placing of the student at home or at work and the justification of the abandonment in this form of education of interpersonal, face-to-face communication, previously considered to be a cultural imperative for education in both east and west. This book explores the problems that distance education poses to the theorist, bringing together an international team of distance educators to address these issues for the first time in a systematic way. The team comprises theoreticians, administrators, experts in educational technology and adult education, experts in learning from video machines, from computers and other forms of technology. Contributions from Italy, and Scandinavia contrast with viewpoints provided by scholars from the US, Canada, Australia, and the UK.

discovery education assignment answer key: Academic Skills in Early Childhood Education and Care Ita Kennelly, Meera Oke, 2024-07-20 This book supports the development of academic, personal, and professional skills for students of Early Childhood Education and Care (ECEC). It aims to demystify aspects of learning and writing practices and can be used by students as a practical resource to enhance their engagement with education and to support their success on their programmes. The book guides students in a range of areas to help their academic development including study techniques, time management, managing groupwork, understanding assessment requirements, academic writing and how to work effectively within a digital learning environment. In addition, the book features a strong personal and professional development dimension which enables readers to engage in a process of self-inquiry as part of their learning. This self-inquiry is important to understanding assumptions about learning and can help students to explore their prior educational experiences and to identify their particular motivations and challenges. The book extends this self-inquiry to support the development of reflective practice which is key to enhancing students' learning and to enabling the ongoing professional development and practice of the ECEC educator. While many ECEC undergraduate programmes offer academic guidance to students, there is a gap for a more embedded academic support which is discipline specific and therefore more closely attuned to the needs of the ECEC student and the emerging needs of the sector. In addition to providing a resource for students and practitioners, this book can also serve as a useful resource for lecturers in the ECEC discipline. Its accompanying site contains downloadable templates from the book which provide a range of activities and prompts suitable for engaging students in thinking about their learning and writing about their professional practice.

discovery education assignment answer key: Engineering Education John Heywood, 2006-01-24 A synthesis of nearly 2,000 articles to help make engineers better educators While a significant body of knowledge has evolved in the field of engineering education over the years, much of the published information has been restricted to scholarly journals and has not found a broad audience. This publication rectifies that situation by reviewing the findings of nearly 2,000 scholarly articles to help engineers become better educators, devise more effective curricula, and be more effective leaders and advocates in curriculum and research development. The author's first objective

is to provide an illustrative review of research and development in engineering education since 1960. His second objective is, with the examples given, to encourage the practice of classroom assessment and research, and his third objective is to promote the idea of curriculum leadership. The publication is divided into four main parts: Part I demonstrates how the underpinnings of education—history, philosophy, psychology, sociology—determine the aims and objectives of the curriculum and the curriculum's internal structure, which integrates assessment, content, teaching, and learning Part II focuses on the curriculum itself, considering such key issues as content organization, trends, and change. A chapter on interdisciplinary and integrated study and a chapter on project and problem-based models of curriculum are included Part III examines problem solving, creativity, and design Part IV delves into teaching, assessment, and evaluation, beginning with a chapter on the lecture, cooperative learning, and teamwork The book ends with a brief, insightful forecast of the future of engineering education. Because this is a practical tool and reference for engineers, each chapter is self-contained and may be read independently of the others. Unlike other works in engineering education, which are generally intended for educational researchers, this publication is written not only for researchers in the field of engineering education, but also for all engineers who teach. All readers acquire a host of practical skills and knowledge in the fields of learning, philosophy, sociology, and history as they specifically apply to the process of engineering curriculum improvement and evaluation.
