holistic wellness miami: *Biohacker's Magazine Issue 19* , At the end of our lives, do we not all have the will to be able to say that we fully lived our life to the extent of our abilities? In other words, deep down, I believe we all have the desire to leave this the world knowing that although we make mistakes and had some pitfalls, we did our absolute best to be the highest level of the person we were made to be. The reason we all have this desire is not a selfish one but in fact an unselfish one. This is because when we are optimizing ourselves to function at our premium versions of ourselves, we are providing a stronger, more efficient individual to the benefit of the community as a whole. Then the question arises, how do we know who we are at our maximum level, and better yet, how do we reach this utmost level of attainment and fulfillment? The answer can be summed up to one word: Wisdom. Wisdom is our best friend. It guides us and protects us. It strengthens us and nourishes us. There are many other words for this - Discipline, Knowledge, etc. - but Wisdom is perhaps the word with the most meaning. When humans make it their mission to grow towards something higher, something more transcendent than their baseline selves, they are undertaking the process of acquiring wisdom. Wisdom can be sought in many ways - books, orators, experiences. Biohacking in a most fundamental sense is for all intents and purposes an avenue to acquiring wisdom about ourselves both subjectively and objectively, and taking this knowl- edge to optimize our entire self (soul, mind, & body) for purpose of healthy growth and prosperity. In our forever increasingly busy world full of languishing and slothful distractions, we must continually fight back the urge to give more of our time to these easy, mind-numbing diversions and instead see the present and long-term benefits of allocating our time towards to pursuit of wisdom and optimization, essentially the pursuit of happiness. Prioritize your biohacks and self-growth habits in your life and continue leveling up!

holistic wellness miami: *How to Be Well* Amy Larocca, 2025-05-13 A deeply researched, lively, and personal exploration of the multibillion-dollar wellness industry -- about why women are feeling so un-well and how this trend has shaped our thinking about health and self-care Peloton. Pilates. Biohacking. Colonics. Ashwagandha. Today, the wellness industry is a \$3.7 trillion behemoth that touches us all. In this timely and clear-eyed book, journalist Amy Larocca peels back the layers behind the wellness movement and reckons with its promises and profits. How did we get here and how did the idea of wellness become integrated with women's lives? And how did we end up spending so much money on products that may not work at all? Amy Larocca takes readers into the communities that swear by their activated charcoal toothpaste and green juice enemas, explaining what each of these practices really is—and what the science says. Larocca holds a magnifying glass to alternative medicine and nouveau lifestyle prescriptions -- and tries a lot herself along the way -- ultimately delivering an assessment of how the wellness industry embodies our (gendered, class-based, racialized) perceptions of care and self-improvement, and how it preys on our unshakable fear of the unknown. She traces the history of how the beauty and fashion industries have peddled snake oil to women for decades—and why we keep coming back for more. A clear-eyed and honest portrait of the weird world of wellness, *How to Be Well* lays bare the ways in which the simple notion of caring for oneself has become a seriously big business.

In this book, James N. Gilmore argues that these lofty promises mask forms of surveillance and power. Charting the implementation of wearables in areas of accessibility, health, sports, labor, law enforcement, and infrastructure, Gilmore demonstrates how these devices have been positioned as authoritative means for producing knowledge about human activity. Drawing on news reporting, advertising, film and television, company reports, and legal policies, he shows how this knowledge production reproduces three distinct modes of power: normalcy, surveillance, and solutionism. *Bringers of Order* empowers readers to examine the complicated ways our devices reshape how we think about our lives and our ethics and why we should resist companies analyzing our personal data.

holistic wellness miami: *Psychology in Education* Tim Corcoran, 2014-05-13 Psychology's contribution to education has produced a persuasive and burgeoning literature willing to measure (e.g. intelligence quotients), categorise (e.g. learning and/or behavioural difficulties) and

Practices like these pervade relationships existing between psychology and education because they share in common certain views of people and the worlds in which they learn. There is however increased acknowledgement that contemporary practice demands alternate ways of working. As learning communities and educators endeavour to make a difference in peoples' lives, they are critically questioning how their use of psychology in education constitutes future possibilities for personhood and psychosocial action. In this book, a group of respected international scholars examine controversies presently facing the enduring relationship between psychology and education. The book will appeal to readers who are interested in the innovative development and application of psychological theories and practices in/to education. The book will be of interest to transnational audiences and is accessible to scholars and students in disciplines including psychology, education, sociology, social work, youth studies, public and allied health. holistic wellness miami: Linking agriculture and tourism to strengthen agrifood systems in Asia and the Pacific Food and Agriculture Organization of the United Nations, 2023-08-03 Agrifood systems in Asia and the Pacific can be strengthened by tapping on agrifood-tourism linkages. When tourism and agrifood systems interact, both synergies and competition appear. Agriculture and tourism compete between themselves and other sectors for land, water, labour, capital, and transport and logistics services. Cross-sectoral synergies arise when agriculture and tourism influence each other through their respective demand conditions and changes in the enabling environment. These cross-sectoral synergies can be instrumental in strengthening agrifood systems in the region and addressing interlinked crises in the post-pandemic era. Governments across Asia and the Pacific have acknowledged the potential of tapping into agrifood- tourism linkages to advance sustainable development in both urban (food tourism) and rural areas (mostly agricultural tourism), and are implementing efforts to develop this subsector. Agrifood-tourism linkages can create income-generating opportunities for farmers and tourism operators, boost employment and stimulate overall economic growth, promote the development of sustainable agrifood systems, prevent rural youth outmigration and help preserve culinary and agricultural heritage. This publication guides policymakers in the region in the preparation of a strategic plan aimed at developing agrifood tourism and the tourism food value chain as drivers of sustainable development. The successful positioning of a country or location as a culinary or agricultural tourism destination and the creation of synergies between the agriculture and tourism sectors requires a shared vision and coordination between policymakers, destination managers, tourism and agrifood businesses, chefs, farmers and other key stakeholders.
