international law practice exam mcq: Teaching International Law Jean-Pierre Gauci, Barrie Sander, 2024-06-26 The practice of teaching international law is conducted in a wide range of contexts across the world by a host of different actors – including scholars, practitioners, civil society groups, governments, and international organisations. This collection brings together a diversity of scholars and practitioners to share their experiences and critically reflect on current practices of teaching international law across different contexts, traditions, and perspectives to develop existing conversations and spark fresh ones concerning teaching practices within the field of international law. Reflecting on the responsibilities of teachers of international law to engage with and confront histories, contemporary crises, and everyday events in their teaching, the collection explores efforts to decenter the teacher and the law in the classroom, opportunities for dialogical and critical approaches to teaching, and the possibilities of co-producing non-conventional pedagogies that question the mainstream underpinnings of international law teaching. Focusing on the tools and techniques used to teach international law to date, the collection examines the teaching of international law in different contexts. Traversing a range of domestic and regional contexts around the world, the book offers insights into both the culture of teaching in particular domestic settings, as well as the structural challenges and obstacles that arise in terms of who, what,

international law practice exam mcq: The Continent of International Law Barbara Koremenos, 2016-03-29 Every year, states negotiate, conclude, sign, and give effect to hundreds of new international agreements. Koremenos argues that the detailed design provisions of such agreements matter for phenomena that scholars, policymakers, and the public care about: when and how international cooperation occurs and is maintained. Theoretically, Koremenos develops hypotheses regarding how cooperation problems like incentives to cheat can be confronted and moderated through law's detailed design provisions. Empirically, she exploits her data set composed of a random sample of international agreements in economics, the environment, human rights and security. Her theory and testing lead to a consequential discovery: considering the vagaries of international politics, international cooperation looks more law-like than anarchical, with the detailed provisions of international law chosen in ways that increase the prospects and robustness of cooperation. This nuanced and sophisticated 'continent of international law' can speak to scholars in

any discipline where institutions, and thus institutional design, matter.
