kumon algebra 5: *How "American" Is Globalization?* William H. Marling, 2006-06-12 William Marling's provocative work analyzes—in specific terms—the impacts of American technology and culture on foreign societies. Marling answers his own question—how American is globalization?—with two seemingly contradictory answers: less than you think and more than you know. Deconstructing the myth of global Americanization, he argues that despite the typically American belief that the United States dominates foreign countries, the practical effects of Americanization amount to less than one might suppose. Critics point to the uneven popularity of McDonalds as a prime example of globalization and supposed American hegemony in the world. But Marling shows, in a series of case studies, that local cultures are intrinsically resilient and that local languages, eating habits, land use, education systems, and other social patterns determine the extent to which American culture is imported and adapted to native needs. He argues that globalization can actually accentuate local cultures, which often put their own imprint on what they import—from translating films and television into hundreds of languages to changing the menu at a McDonalds to include the Japanese favorite Chicken Tastuta. Marling also examines the unexpected ways in which American technology travels abroad: the technological transferability of the ATM, the practice of franchising, and shop-floor American innovations like shipping containers, bar codes, and computers. These technologies convey American attitudes about work, leisure, convenience, credit, and travel, but as Marling shows, they take root overseas in ways that are anything but American.

kumon algebra 5: *No Kids Allowed* Michelle Ann Abate, 2020-10-13 Children's literature isn't just for children anymore. This original study explores the varied forms and roles of children's literature—when it's written for adults. What do Adam Mansbach's *Go the F**k to Sleep* and Barbara Park's *MA! There's Nothing to Do Here!* have in common? These large-format picture books are decidedly intended for parents rather than children. In *No Kids Allowed*, Michelle Ann Abate examines a constellation of books that form a paradoxical new genre: children's literature for adults.

Distinguishing these books from YA and middle-grade fiction that appeals to adult readers, Abate argues that there is something unique about this phenomenon. Principally defined by its form and audience, children's literature, Abate demonstrates, engages with more than mere nostalgia when recast for grown-up readers. Abate examines how board books, coloring books, bedtime stories, and series detective fiction written and published specifically for adults question the boundaries of genre and challenge the assumption that adulthood and childhood are mutually exclusive.

kumon algebra 5: The Handbook of Canadian Boarding Schools Ashley Thomson, 1999-09-01 Private schools have frequently provided innovative, experimental, and creative programunavailable to students in the public system. The most successful have survived and expanded by offering an educational experience widely perceived to be not just as good as that available in the public system, but better. In Canada, private schools are enjoying an unprecedented popularity and while most are day-only, over sixty sustain boarding programs, as do two off-shore Canadian schools. The Handbook of Canadian Boarding Schools presents information on the educational environment of each province, then offers comparative information on each boarding school. The information on each school includes: basic data, location, history, philosophy, the campus, boarding facilities, health and safety, administration and faculty, student body and student conduct, academic calendar and program, information technology, student activities and student conduct, admission and costs. The Handbook also supplies several appendices outlining important programs often available through boarding schools, such as Advanced Placement courses and the International Baccalaureate. For parents in Canada and abroad about to commit substantial sums to their children's education, the Handbook of Canadian Boarding Schools is an essential tool to help them make the right decision. It is also an indispensable resource for supporters of the public system looking for ideas that have worked elsewhere.

kumon algebra 5: Motherhood, Childhood, and Parenting in an Age of Education

Maryellen Schaub, 2023-05-05 Motherhood, as a celebrated yet underappreciated role, is often thought of as a natural process, something instinctive that we refine by watching our own mothers and others in our community. We rarely think of motherhood as something that is time and culturally specific, yet, like culture itself, it is socially constructed, and both motherhood and childhood evolve over time. With the rise in educational attainment of mothers in the American population, the expectations associated with childhood increasingly include not just education but cognitive development and extracurricular activities as the partnership between parents and education intensifies in the joint project of human development of children. Motherhood, Childhood, and Parenting in an Age of Education offers a new way to conceptualize the high demands of contemporary parenthood. It traces the emerging narrative about the good mother, changes in the underlying assumptions of what constitutes the good mother, and the implications for the good childhood as education grows in institutional strength. This book demonstrates that education is driving the formation of the parent and child roles in the dominant contemporary culture of the US although alternate models exist. Education itself has expanded over time to become our largest social intervention, defining behaviors and beliefs such as parental involvement in schooling, the unengaged parent, and the deficient student.
