jane goodall daughter in law: Growl Kim Stallwood, 2014-05-14 For four decades, Kim Stallwood has had a front seat in the animal rights movement, starting at the grassroots in England and working his way up to leadership positions at some of the best-known organizations in the world, including Compassion In World Farming, the British Union for the Abolition of Vivisection, and People for the Ethical Treatment of Animals. Yet, as Stallwood reveals in this memoir of an eventful life dedicated to social justice for the voiceless, finding the truest path for progress has meant learning a lot along the way. Equal parts personal narrative, social history, and impassioned call for rethinking animal advocacy, Growl describes Stallwood's journey from a meat-eating slaughterhouse worker to a vegan activist for all species. He explains the importance of four key values in animal rights philosophy and practice—compassion, truth, nonviolence, and justice—and how a deeper understanding of their role not only leads us to discover our humanity for animals, but also for ourselves.

Williams, 2023-07-11 The Oxford Handbook of Feminism and Law in the United States provides a wide-ranging exploration of U.S. legal feminism, analyzing both prominent brands of feminist legal theory and key feminist social

movements. The Handbook's chapters examine the influence that legal feminism has exerted on law, from the creation of feminist claims such as sexual harassment and gender equity in sports to new understandings of consent, motherhood, and reproductive justice. Contributions from leading feminist thinkers dissect the backlash to feminism and compare feminism to adjacent discourses including queer theory and masculinities theory. The Handbook is also forward-looking insofar as it imagines how legal feminism will affect emerging areas like digital privacy, immigration law, and environmental law. Thanks to its expansive scope and highly-regarded team of editors and contributors, The Oxford Handbook of Feminism and Law in the United States will be an essential source for scholars and students working in a range of interconnected fields.

jane goodall daughter in law: The Descent of Madness Jonathan Burns, 2007-03-12 Drawing on evidence from across the behavioural and natural sciences, this book advances a radical new hypothesis: that madness exists as a costly consequence of the evolution of a sophisticated social brain in Homo sapiens. Having explained the rationale for an evolutionary approach to psychosis, the author makes a case for psychotic illness in our living ape relatives, as well as in human ancestors. He then reviews existing evolutionary theories of psychosis, before introducing his own thesis: that the same genes causing madness are responsible for the evolution of our highly social brain. Jonathan Burns' novel Darwinian analysis of the importance of psychosis for human survival provides some meaning for this form of suffering. It also spurs us to a renewed commitment to changing our societies in a way that allows the mentally ill the opportunity of living. The Descent of Madness will be of interest to those in the fields of psychiatry, psychology, sociology and anthropology, and is also accessible to the general reader.

jane goodall daughter in law: The First Human Ann Gibbons, 2007-04-10 In this dynamic account, award-winning science writer Ann Gibbons chronicles an extraordinary quest to answer the most primal of questions: When and where was the dawn of humankind? Following four intensely competitive international teams of scientists in a heated race to find the "missing link"—the fossil of the earliest human ancestor—Gibbons ventures to Africa, where she encounters a fascinating array of fossil hunters: Tim White, the irreverent Californian who discovered the partial skeleton of a primate that lived 4.4 million years ago in Ethiopia; French paleontologist Michel Brunet, who uncovers a skull in Chad that could date the beginnings of humankind to seven million years ago; and two other groups—one led by zoologist Meave Leakey, the other by British geologist Martin Pickford and his French paleontologist partner, Brigitte Senut—who enter the race with landmark discoveries of their own. Through scrupulous research and vivid first-person reporting, The First Human reveals the perils and the promises of fossil hunting on a grand competitive scale.

jane goodall daughter in law: Rough and Tumble Travis Pickering, 2013-04-10 Travis Rayne Pickering argues that the advent of ambush hunting approximately two million years ago marked a milestone in human evolution, one that established the social dynamic that allowed our ancestors to expand their range and diet. He challenges the traditional link between aggression and human predation, however, claiming that while aggressive attack is a perfectly efficient way for our chimpanzee cousins to kill prey, it was a hopeless tactic for early human hunters, who—in comparison to their large, potentially dangerous prey—were small, weak, and slow-footed. Technology that evolved from wooden spears to stone-tipped spears and ultimately to the bow and arrow increased the distance between predator and prey and facilitated an emotional detachment that allowed hunters to stalk and kill large game. Based on studies of humans and of other primates, as well as on fossil and archaeological evidence, Rough and Tumble offers a new perspective on human evolution by decoupling ideas of aggression and predation to build a more realistic understanding of what it is to be human.

jane goodall daughter in law: In Search of Human Nature Carl N. Degler, 1992-11-05 Winner of the Pulitzer Prize in History in 1972, and a past president of both the Organization of American Historians and the American Historical Association, Carl Degler is one of America's most eminent living historians. He is also one of the most versatile. In a forty year career, he has written brilliantly

on race (Neither Black Nor White, which won the Pulitzer Prize), women's studies (At Odds, which Betty Friedan called a stunning book), Southern history, the New Deal, and many other subjects. Now, in *The Search for Human Nature*, Degler turns to perhaps his largest subject yet, a sweeping history of the impact of Darwinism (and biological research) on our understanding of human nature, providing a fascinating overview of the social sciences in the last one hundred years. Just how much of human nature is determined by genetics? With this sweeping book, Pulitzer prize-winning historian Carl Degler provides an engrossing account of how we have grappled with that question, by tracing the impact of Darwinism on the social sciences in the last hundred years. The idea of biological roots to human nature was almost universally accepted at the turn of the century--and was used to reinforce prejudice against women, non-whites, and the poor (whose positions were seen as the result of genetic weakness), until it was discredited by the likes of Franz Boas, Margaret Mead, and B.F. Skinner. But more recently, Degler writes, under the influence of Konrad Lorenz, Jane Goodall, Edward O. Wilson, and others, a more objective approach has uncovered new links between evolution and human behavior. A masterful work by one of America's preeminent historians, *In Search of Human Nature* sheds brilliant new light on an essential question--and how changing times have influenced the answers we have found.

jane goodall daughter in law: The Struggle for Human Rights Nehal Bhuta, Florian Hoffmann, Sarah Knuckey, Frédéric Mégret, Margaret Satterthwaite, 2021-09-30 *The Struggle for Human Rights* evaluates the themes of law, politics, and practice which together define international human rights practice and scholarship. Taking as its inspiration the 40 year career of international human rights advocate Philip Alston, this book of essays examines foundational debates central to the evolution of the human rights project. It critiques the reform of human rights institutions and reflects on the place of human rights practice in contemporary society. Bringing together leading scholars, practitioners, and critics of human rights from a variety of disciplines, *The Struggle for Human Rights* addresses the most urgent questions posed within the field of human rights today - its practice and its theory. Rethinking assumptions and re-evaluating strategies in the law, politics, and practice of international human rights, this book is essential reading for academics and human rights professionals around the world.

jane goodall daughter in law: The Learning Brain Torkel Klingberg, 2013 All learning takes place in the brain, and the key to a child's development is how its brain matures. But how can we take the step from knowledge of neurons to education? What is the cause of inattention, dyslexia, or dyscalculia? How does brain maturation affect teenage behavior? These are all important questions to ask as many statistics suggest that levels of knowledge in children have stagnated and in some cases receded. Drawing from his and others research, and, in certain cases, stories and examples, Torkel Klingberg, a leading cognitive neuroscientist, shows how the brain is affected by genes, stress, physical exercise and parental relationships. The result of his research, *The Learning Brain*, demonstrates how we can give our children and teenagers the best opportunities to learn and develop.

Julius is a national celebrity, the inspiration behind pop hits and bestselling books. He's also a chimpanzee, born in captivity, but raised in a zookeeper's home after his own mother rejects him. Julius's new parents change his diapers and comfort him when he has nightmares, and their daughters play with him. But soon they must reintroduce Julius to the zoo, a challenging task that brings new learnings on primate behavior and the dangers of animal celebrity. Alternately humorous and heartbreaking, *Almost Human* shows that primates are more like us than we once thought possible. It also charts the transformation of one zoo over time: from a small operation of animals behind bars to a fast-growing attraction coming to terms with twenty-first-century views on animal rights and welfare.
