jane goodall son biography: Animal Biography André Krebber, Mieke Roscher, 2018-10-19 While historiography is dominated by attempts that try to standardize and de-individualize the behavior of animals, history proves to be littered with records of the exceptional lives of unusual animals. This book introduces animal biography as an approach to the re-framing of animals as both objects of knowledge as well as subjects of individual lives. Taking an interdisciplinary perspective and bringing together scholars from, among others, literary, historical and cultural studies, the texts collected in this volume seek to refine animal biography as a research method and framework to studying, capturing, representing and acknowledging animal others as individuals. From Heini Hediger's biting monitor, Hachikō and Murr to celluloid ape Caesar and the mourning of Topsy's gruesome death, the authors discuss how animal biographies are discovered and explored through connections with humans that can be traced in archives, ethological fieldwork and novels, and probe the means of constructing animal biographies from taxidermy to film, literature and social media. Thus, they invite deeper conversations with socio-political and cultural contexts that allow animal biographies to provide narratives that reach beyond individual life stories, while experimenting with particular forms of animal biographies that might trigger animal activism and concerns for animal well-being, spur historical interest and enrich the literary imagination.

jane goodall son biography: *Animal Biographies* Éric Baratay, 2022-08-15 What would we learn if animals could tell their own stories? Éric Baratay, a pioneering researcher in animal histories in France, applies his knowledge of historical methodologies to give voice to some of the nineteenth and twentieth centuries' most interesting animals. He offers brief yet innovative accounts of these animals' lives in a way that challenges the reader's thinking about animals. Baratay illustrates the need to develop a nonanthropocentric means of viewing the lives of animals and including animals themselves in the narrative of their lives. *Animal Biographies* launches an all-new investigation into the lives of animals and is a major contribution to the field of animal studies. This

English translation of Éric Baratay's *Biographies animales: Des Vies retrouvées*, originally published in France in 2017 (Éditions du Seuil), uses firsthand accounts starting from the nineteenth century about specific animals who lived in Europe and the United States to reconstruct, as best as possible, their stories as they would have experienced them. History is, after all, not just the domain of humans. Animals have their own. Baratay breaks the model of human exceptionalism to give us the biographies of some of history and literature's most famous animals. The reader will catch a glimpse of storied lives as told by Modestine, the donkey who carried Robert Louis Stevenson through the Alps; Warrior, the World War I horse made famous in Steven Spielberg's *War Horse*; Islero, the bull who gored Spain's greatest bullfighter; and others. Through these stories we discover their histories, their personalities, and their shared experiences with others of their species.
