math practice roblox: Constructing Music Teresa M. Nakra, 2024 Why does music exert such a strong pull on us? How does it work? Traditional courses in music fundamentals give students a basic understanding of the building blocks of music and how to put them together to make a result that produces an intended effect. Constructing Music: Musical Explorations in Creative Coding takes students a step further: through a series of step-by-step tutorials and lessons, author Teresa M. Nakra presents a new method for teaching music fundamentals that foregrounds creative coding practices and builds upon the computing skills that today's students already possess. By encouraging experimentation with computer code, this book gives students tools to actively investigate, simulate, and engage with the structure of music, ultimately leading to greater understanding about the processes that underlie music's power over us. Designed to support computer-based learning in tonal harmony, musicianship, and music theory, Constructing Music avoids the lens of Western music notation and instead explains music content through analogies with toy bricks and references ideas from creative technology, engineering, and design. Students also engage directly with the components of musical structure using editable short code patches developed in Max, a visual coding environment for interactive music, audio, and media. Dozens of patches accompany the book and allow readers to play with the building blocks of sound, reinforcing each topic by tinkering, modifying, and creating their own versions of the material. Each chapter explains core music theory concepts in detail and supports every description through code simulations, progressing through the topics with increasing complexity. In the final chapter, Nakra explores the questions and theories that emerge from the lessons, considering the role of music as a proto-form of AI and its impacts on emotion, wellness, and creativity.

math practice roblox: The Nutcracker Chronicles Janine Kovac, 2024-11-12 Perfect for The Nutcracker holiday market and fans of work/life balance books, this memoir of a ballet dancer-turned-literary curator shares the real-life journey of a dancer, wife, and mother. The Nutcracker Chronicles, a modern twist on the beloved holiday ballet, intertwines the story of Clara and her nutcracker prince with the true-life stories that unfold backstage. The curtain rises on Ballet El Paso's production of The Nutcracker, where young Janine Kovac is cast as Fritz, the boy who breaks the nutcracker. Her director is Ingeborg Heuser, a German woman who once performed for Hitler and who peppers her teaching with insults like, "Why can't you just dance like a pretty girl?" At least it's better than "You look like a cow on ice skates," which is what the other girls hear daily. Onstage, Janine wins the battle and embarks on a voyage through a snowy forest to the Land of the Sweets, where she serves as spectator to a beautiful dance. She also travels offstage, leaving El Paso to study at San Francisco Ballet before landing a job in Iceland and returning to California, where she rises through the ranks from soldier to snowflake to candy soloist. Eventually, however, she is relegated to watching other people dance—her husband, her children, her students—and her claim to the spotlight is replaced by the quest to find joy in her new roles.
