

occupational therapist acute care

occupational therapist acute care plays a critical role in the recovery and rehabilitation of patients in hospital settings, particularly those experiencing sudden illness or injury. This specialized area of occupational therapy focuses on helping patients regain essential daily living skills, improve functional independence, and prepare for discharge from acute care facilities. Occupational therapists in acute care collaborate closely with multidisciplinary teams to assess patient needs, develop individualized treatment plans, and implement interventions that address physical, cognitive, and psychosocial challenges. Understanding the scope, responsibilities, and impact of occupational therapists in acute care is vital for healthcare providers, patients, and families alike. This article explores the role of occupational therapists in acute care, their assessment and intervention strategies, challenges faced in this setting, and the importance of their services in patient outcomes.

- The Role of Occupational Therapist in Acute Care
- Assessment and Evaluation in Acute Care
- Intervention Strategies and Techniques
- Collaboration and Multidisciplinary Approach
- Challenges Faced by Occupational Therapists in Acute Care
- Impact on Patient Outcomes and Recovery

The Role of Occupational Therapist in Acute Care

Occupational therapists in acute care settings provide essential rehabilitation services to patients who have experienced sudden medical events such as strokes, traumatic injuries, surgeries, or critical illnesses. Their primary goal is to enable patients to perform activities of daily living (ADLs) independently or with minimal assistance, facilitating a smoother transition from hospital to home or other care settings. The occupational therapist acute care professional evaluates physical abilities, cognitive functions, and emotional status to design targeted interventions that promote functional recovery. This role demands quick decision-making, adaptability, and comprehensive knowledge of medical conditions and rehabilitation techniques.

Scope of Practice

The scope of occupational therapy in acute care encompasses a wide range of activities, including early mobilization, cognitive retraining, adaptive equipment recommendations, and patient education. Occupational therapists assess patients' abilities to manage self-care tasks such as dressing, grooming, and feeding and address barriers to independence caused by pain, weakness, or cognitive impairments. They also focus on preventing secondary complications like pressure sores

and joint contractures through positioning and therapeutic exercises.

Patient Populations Served

Occupational therapists in acute care work with diverse patient populations, including those recovering from stroke, orthopedic surgeries, cardiac events, respiratory conditions, and neurological disorders. Each patient group requires specialized approaches tailored to their unique functional challenges and medical status. Acute care therapists must remain knowledgeable about evolving treatment protocols and medical technologies to provide optimal care.

Assessment and Evaluation in Acute Care

Assessment in acute care occupational therapy is comprehensive, timely, and focused on identifying patients' current functional status and potential for improvement. The evaluation process often begins shortly after hospital admission to minimize delays in rehabilitation and maximize recovery potential. Occupational therapists utilize standardized tools and clinical observations to assess motor skills, cognitive abilities, sensory processing, and psychosocial factors.

Functional Assessments

Functional assessments are critical in determining a patient's capability to perform ADLs and instrumental activities of daily living (IADLs). Commonly used assessments include the Functional Independence Measure (FIM), Barthel Index, and cognitive screening tests such as the Mini-Mental State Examination (MMSE). These tools help quantify the level of assistance required and guide treatment planning.

Medical and Environmental Considerations

Occupational therapists in acute care must consider the medical stability of patients, including vital signs, pain levels, and medical restrictions. Environmental factors such as hospital room setup, availability of assistive devices, and family support are also evaluated to tailor interventions effectively. Collaboration with nursing and medical staff ensures that assessments align with overall care plans and patient safety protocols.

Intervention Strategies and Techniques

Interventions provided by occupational therapists in acute care focus on restoring function, preventing complications, and preparing patients for discharge. These interventions are evidence-based, patient-centered, and adaptable to rapidly changing clinical conditions. Therapists employ a variety of techniques to address physical, cognitive, and psychosocial needs.

Physical Rehabilitation

Physical rehabilitation techniques include therapeutic exercises to improve strength, range of motion, and coordination. Early mobilization activities such as bed mobility, transfers, and gait training are emphasized to reduce hospital-associated deconditioning. Positioning and splinting may be used to prevent contractures and maintain joint integrity.

Cognitive and Perceptual Interventions

For patients with cognitive deficits, occupational therapists implement strategies to improve attention, memory, problem-solving, and executive functions. Activities may involve task-specific training, cognitive drills, and environmental modifications to enhance orientation and safety. Addressing perceptual impairments is crucial for preventing falls and facilitating independence.

Adaptive Equipment and Environmental Modifications

Recommending and training patients in the use of adaptive equipment such as walkers, reachers, and dressing aids is a key component of acute care occupational therapy. Therapists also assess the home environment and suggest modifications to reduce hazards and support functional independence post-discharge.

Collaboration and Multidisciplinary Approach

Occupational therapists in acute care settings work closely with a multidisciplinary team to ensure comprehensive patient care. Collaboration enhances communication, promotes holistic treatment plans, and improves patient outcomes. The acute care environment demands coordinated efforts among healthcare professionals.

Interprofessional Communication

Effective communication between occupational therapists, physicians, nurses, physical therapists, speech-language pathologists, social workers, and case managers is essential. Regular team meetings and shared documentation facilitate information exchange regarding patient progress, challenges, and discharge planning.

Role in Discharge Planning

Occupational therapists contribute valuable input during discharge planning by assessing patients' readiness to return home or transition to other care settings. They provide recommendations regarding support services, home modifications, and outpatient therapy referrals to ensure continuity of care and reduce readmission risks.

Challenges Faced by Occupational Therapists in Acute Care

Occupational therapists working in acute care face unique challenges due to the fast-paced, high-acuity nature of the environment. These challenges require specialized skills, resilience, and adaptability to deliver effective care despite constraints.

Time Constraints and Patient Turnover

Therapists often have limited time to evaluate and treat patients because of rapid patient turnover and short hospital stays. This necessitates efficient assessment techniques and prioritization of interventions to maximize therapeutic gains within restricted time frames.

Medical Complexity and Patient Variability

Patients in acute care frequently present with complex medical conditions and fluctuating health statuses. Occupational therapists must continuously monitor clinical changes and adjust treatment plans accordingly, balancing safety and rehabilitation goals.

Resource Limitations

Limited availability of equipment, space, and staffing can impact the delivery of occupational therapy services. Therapists must be resourceful and innovative in utilizing available tools and collaborating with team members to overcome these barriers.

Impact on Patient Outcomes and Recovery

The involvement of occupational therapists in acute care significantly influences patient outcomes by promoting early functional recovery, reducing complications, and supporting psychosocial well-being. Their interventions contribute to shorter hospital stays, decreased readmission rates, and improved quality of life.

Improvement in Functional Independence

Occupational therapy interventions enable patients to regain essential skills such as self-care, mobility, and cognitive function, which are critical for independent living. Early rehabilitation in acute care sets the foundation for ongoing recovery and successful community reintegration.

Enhanced Patient and Family Education

Therapists provide education to patients and families regarding condition management, adaptive strategies, and safety precautions. This empowerment fosters confidence and preparedness for post-

discharge challenges.

Contribution to Healthcare System Efficiency

By facilitating timely recovery and discharge planning, occupational therapists help reduce hospital length of stay and optimize resource utilization. Their role is integral to the overall efficiency and effectiveness of acute care services.

- Early mobilization and rehabilitation
- Comprehensive functional assessments
- Interdisciplinary team collaboration
- Patient-centered adaptive interventions
- Discharge planning and patient education

Frequently Asked Questions

What is the role of an occupational therapist in acute care settings?

In acute care settings, occupational therapists focus on helping patients regain independence in daily activities, manage physical and cognitive impairments, and prepare for discharge by providing therapeutic interventions tailored to the patient's immediate medical condition.

How does acute care occupational therapy differ from rehabilitation therapy?

Acute care occupational therapy is provided in a hospital or medical facility shortly after an illness or injury, emphasizing early intervention to prevent complications, whereas rehabilitation therapy typically occurs after acute care, focusing on long-term recovery and functional improvements.

What conditions do occupational therapists commonly treat in acute care?

Occupational therapists in acute care frequently treat patients with stroke, traumatic brain injury, orthopedic injuries, cardiac conditions, respiratory illnesses, and post-surgical recovery to help restore function and promote safe discharge.

What assessments are used by occupational therapists in acute care?

Common assessments include the Functional Independence Measure (FIM), cognitive screenings, range of motion tests, muscle strength evaluations, and activities of daily living (ADL) assessments to determine patient abilities and plan interventions.

How do occupational therapists contribute to discharge planning in acute care?

Occupational therapists evaluate patients' functional status, home environment, and support systems to recommend appropriate discharge destinations, equipment needs, and home modifications to ensure a safe transition from hospital to home or other care settings.

What are some challenges occupational therapists face in acute care environments?

Challenges include managing medically complex patients, limited time for therapy sessions, coordinating with multidisciplinary teams, addressing rapid changes in patient status, and ensuring effective communication with patients and families.

What skills are essential for occupational therapists working in acute care?

Essential skills include clinical reasoning, knowledge of medical conditions, ability to work in fast-paced environments, strong communication and collaboration skills, and proficiency in conducting functional and cognitive assessments.

How has telehealth impacted occupational therapy in acute care?

Telehealth has allowed occupational therapists to provide remote assessments, consultations, and caregiver training in acute care settings, improving access to care, reducing exposure risks, and facilitating continuity of therapy during situations such as the COVID-19 pandemic.

Additional Resources

1. Acute Care Occupational Therapy: Principles and Practice

This comprehensive guide explores the essential principles and practical approaches of occupational therapy in acute care settings. It covers patient evaluation, intervention strategies, and interdisciplinary collaboration. The book is designed to help therapists provide effective care for patients with complex medical conditions.

2. Occupational Therapy in Acute Care: Foundations for Practice

Focusing on the foundational knowledge required for acute care, this book addresses the critical roles occupational therapists play in hospitals and intensive care units. It includes case studies,

treatment protocols, and evidence-based practices. Readers will gain insight into managing patients with trauma, neurological disorders, and medical instability.

3. Acute Care Therapy: A Guide for Occupational Therapists

This practical manual offers step-by-step guidance on delivering occupational therapy services in fast-paced acute care environments. It emphasizes assessment techniques, early rehabilitation, and discharge planning. The book also highlights the importance of communication within multidisciplinary teams.

4. Occupational Therapy in Critical Care: Strategies for Success

Targeted at therapists working with critically ill patients, this text delves into critical care settings such as the ICU and emergency departments. It provides strategies for addressing physical, cognitive, and psychosocial challenges faced by patients. The book also discusses safety considerations and ethical issues in acute care.

5. Early Intervention in Acute Care: Occupational Therapy Approaches

This book focuses on the role of occupational therapy in initiating early rehabilitation during acute hospital stays. It covers interventions aimed at preventing functional decline and promoting recovery. Therapists will find valuable information on goal setting, patient engagement, and outcome measurement.

6. Neurorehabilitation in Acute Care: An Occupational Therapy Perspective

Specializing in neurological conditions, this text examines the assessment and treatment of patients with stroke, brain injury, and other neuro-related issues in acute care. It integrates neuroscience principles with occupational therapy techniques to optimize patient outcomes. The book includes clinical vignettes and practical tips.

7. Functional Assessment for Occupational Therapists in Acute Care Settings

This resource provides detailed methods for evaluating the functional abilities of patients in acute care. It emphasizes standardized tools and clinical observations to inform treatment planning. The book supports therapists in making accurate assessments that guide effective interventions.

8. Interprofessional Collaboration in Acute Care Occupational Therapy

Highlighting the importance of teamwork, this book addresses how occupational therapists collaborate with physicians, nurses, and other healthcare professionals. It explores communication strategies, role clarification, and conflict resolution. The aim is to enhance patient care through coordinated efforts.

9. Evidence-Based Practice for Acute Care Occupational Therapists

This text promotes the integration of research evidence into clinical decision-making within acute care settings. It offers guidance on critically appraising studies, applying findings to practice, and measuring outcomes. Therapists will learn to provide high-quality, scientifically supported care for their patients.

occupational therapist acute care: Occupational Therapy in Acute Care Helene Smith-Gabai, Suzanne E. Holm, 2017

occupational therapist acute care: Role Transition from Student to Occupational Therapist in an Acute Care Physical Dysfunction Setting Tyler Giegerich, Juan Rosales (Jr.), 2018

occupational therapist acute care: Occupational Therapy Alice J. Punwar, Suzanne M. Peloquin, 2000 Written in a casual, narrative style, this edition has been updated with five new chapters, new case studies, new clinical stories, and discussion questions focusing on ethical, legal, and interpersonal issues. The text introduces students to the field of occupational therapy and to career opportunities in the field. Using clinical examples and case studies, this edition provides a realistic look at the complementary roles of the registered occupational therapist (OTR) and the certified occupational therapy assistant (COTA). Occupational Therapy: Principles and Practice illustrates the OT process within various practice settings, including the acute care hospital, public school, and home health practice. Other topics include current and prospective issues in the field, the U.S. health care system, influences/implications of managed care on the profession, and the international OT market. All charts/tables reflect current statistics. This edition differs significantly from the earlier edition by the addition of a second author, Professor Suzanne Peloquin, PhD, a recognized authority in her field. Dr. Peloquin recounts stories from occupational therapy history and offers unique insights into current practice.

occupational therapist acute care: Occupational Therapy with Aging Adults Karen Frank Barney, Margaret Perkinson, 2015-12-11 Look no further for the book that provides the information essential for successful practice in the rapidly growing field of gerontological occupational therapy! Occupational Therapy with Aging Adults is a new, comprehensive text edited by OT and gerontological experts Karen Frank Barney and Margaret Perkinson that takes a unique interdisciplinary and collaborative approach in covering every major aspects of geriatric gerontological occupational therapy practice. With 30 chapters written by 70 eminent leaders in gerontology and OT, this book covers the entire continuum of care for the aging population along with special considerations for this rapidly growing demographic. This innovative text also covers topical issues spanning the areas of ethical approaches to treatment; nutrition and oral health concerns; pharmacological issues; low vision interventions; assistive technology supports; and more to ensure readers are well versed in every aspect of this key practice area. - UNIQUE! Intraprofessional and interprofessional approach to intervention emphasizes working holistically and collaboratively in serving older adults. - Case examples help you learn to apply new information to actual patient situations. - Questions at the end of each chapter can be used for discussion or other learning applications. - Chapter on evidence-based practice discusses how to incorporate evidence into the clinical setting. - Chapter on ethics provides a deeper understanding of how to address challenging ethical dilemmas. - UNIQUE! Chapter on the wide range of physiological changes among the aging patient population highlights related occupational performance issues. - UNIQUE! Chapter on oral health explores the challenges faced by older adults.

occupational therapist acute care: Occupational Therapy and Mental Health Jennifer Creek, Lesley Lougher, 2008-01-01 Psychiatrie, santé mentale

occupational therapist acute care: Acute and Emergency Care in Athletic Training Michelle A. Cleary, Katie Walsh Flanagan, 2019-03 Acute and Emergency Care in Athletic Training is an invaluable text for students in athletic training programs. It provides them with the necessary information to examine, treat, and manage common acute injuries and illnesses.

occupational therapist acute care: Elder Care in Occupational Therapy Sandra Cutler Lewis, 2003 Elder Care in Occupational Therapy has been extensively revised into a new and completely

updated second edition. This pragmatic text presents up-to-date information in a user-friendly format that seamlessly flows from one subject to the next. From wellness to hospice, *Elder Care in Occupational Therapy, Second Edition* offers a broad yet detailed discussion of occupational therapy practice that is devoted to older adults. A wide variety of topics are covered in a concise format, such as historical perspectives, theoretical insights, the aging process, and current interventional strategies, to name a few. Twenty informative appendices are also included that clarify issues such as Medicare coverage, community and clinical living arrangements, client-centered practice, exercise programs, evidence-based practice, and a summary of the newly adopted Occupational Therapy Practice Framework: Domain and Process. Additional features: Contains information about the most advanced scientific achievements that can ultimately affect occupational therapy. Lists new and updated resource materials. Presents case studies that provide theoretical considerations and Intervention methods. Clearly discusses exciting and new venues for occupational therapy programming. Explains fundamentals of documentation and current reimbursement issues. Perfect for the student or clinician, *Elder Care in Occupational Therapy, Second Edition* provides classic, professional information on theory, disease entities, and intervention in a comprehensive format.

occupational therapist acute care: 50 Studies Every Occupational Therapist Should Know Beth Pyatak, 2023 *50 Studies Every Occupational Therapist Should Know* is the first book of its kind in occupational therapy (OT). It is an excellent resource for healthcare students and practitioners seeking to gain a better understanding of the breadth and depth of the field and covers a wide range of topics within six key practice areas in OT: productive aging, health and wellness, work and industry, rehabilitation and disability, children and youth, and mental health. As the only book that summarizes OT research in an accessible, user-friendly manner, this work is a must-read for everyone interested in better understanding the evidence informing occupational therapy practice.

occupational therapist acute care: *Kielhofner's Model of Human Occupation* Renee Taylor, Patricia Bowyer, Gail Fisher, 2023-04-21 Updated throughout with the latest research, *Kielhofner's Model of Human Occupation, 6th Edition*, is the definitive resource on the theory and application of the most widely used model in occupational therapy today. A client-centered approach explores what motivates each individual, how they select occupations and establish everyday routines, and how environment influences occupational behavior. This revised 6th Edition reflects the current framework and incorporates the most up-to-date MOHO theory, research, and application practices to give users complete preparation for today's client care challenges.

occupational therapist acute care: Adult Physical Conditions Amy J. Mahle, Amber L. Ward, 2022-03-01 The go-to resource for class, clinical, and practice...now in full color! A team of noted OTA and OT leaders and educators deliver practical, in-depth coverage of the most common adult physical conditions and the corresponding evidence-based occupational therapy interventions. The authors blend theory and foundational knowledge with practical applications to OTA interventions and client-centered practice. This approach helps students develop the critical-thinking and clinical-reasoning skills that are the foundation for professional, knowledgeable, creative, and competent practitioners. New & Updated! Content that incorporates language from the 4th Edition of the Occupational Therapy Practice Framework and aligns with the latest ACOTE standards New & Updated! Full-color, contemporary photographs that reflect real clients and OT practitioners in diverse practice settings New Chapters! Occupational Justice for Diverse and Marginalized Populations, Motor Control and Neurotherapeutic Approaches, Sexual Activity and Intimacy, Dementia: Understanding and Management, and The Influence of Aging on Occupational Performance "Evidence-Based Practice," highlights recent research articles relevant to topics in each chapter, reinforcing the evidence-based perspective presented throughout the text. "Putting It All Together: Sample Treatment and Documentation" uses evaluation, treatment, and documentation based on one relevant case from each diagnosis chapter to connect what students are learning in the classroom and the lab to real-world, skilled, client-centered care. "Technology & Trends" highlights new and relevant technology or treatment trends and also shows how common technologies may be

used in unique ways. Client examples provide context for how the conditions impact function and how to consider the person when doing an intervention. "Case Studies" based on real-life examples illustrate important learning points and feature questions to develop critical-thinking and problem-solving skills. Review questions at the end of each chapter assess progress, knowledge, and critical thinking while offering practice with certification-style questions.

occupational therapist acute care: Life Care Planning and Case Management Handbook, Third Edition Roger O. Weed, 2004 Life Care Planning and Case Management Handbook, Second Edition brings together the many concepts, beliefs, and procedures regarding life care plans into one state-of-the-art publication. This second edition of a bestseller is focused on prioritizing and managing the spectrum of services for people with serious medical problems and their families. Keeping up with advances in the field, this is the most comprehensive reference for everyone concerned with coordinating, evaluating, assessing, and monitoring care.

occupational therapist acute care: Acute Care Surgery LD Britt, Andrew Peitzman, Phillip Barie, Gregory Jurkovich, 2012-10-16 Acute Care Surgery is a comprehensive textbook covering the related fields of trauma, critical care, and emergency general surgery. The full spectrum of Acute Care Surgery is expertly addressed, with each chapter highlighting cutting-edge advances in the field and underscoring state-of-the-art management paradigms. In an effort to create the most definitive reference on Acute Care Surgery, an evidence-based approach is emphasized for all content included. Also, notable controversies are discussed in detail often accompanied by data-driven resolutions.

occupational therapist acute care: The Professional Medical Assistant Sharon Eagle, Cindi Brassington, Candace Dailey, Cheri Goretti, 2009-04-08 This new textbook uses a multidisciplinary, integrated approach to learning that truly reflects the real world in which MAs practice, whether they're focused on the front or back office. From beginning to end, it offers comprehensive, competency-based coverage, complemented by an emphasis on multiple learning styles to better meet the needs of your students. Mastery of all the knowledge and skills that lead to CMA(AAMA) or RMA certification, plus flexibility, versatility, teamwork, and professionalism in the workplace, are the hallmarks of a successful and rewarding career as a Medical Assistant.

occupational therapist acute care: Occupational Therapy with Aging Adults - E-Book Karen Frank Barney, Margaret Perkinson, 2024-06-21 Get all the information you need to work holistically, creatively, and collaboratively when providing services for older adults with Karen Frank Barney, Margaret A. Perkinson, and Debbie Laliberte Rudman's Occupational Therapy with Aging Adults, 2nd Edition. Emphasizing evidence-based, occupation-based practice and a collaborative, interdisciplinary approach, this text walks students and practitioners through the full range of gerontological occupational therapy practice, inclusive of working with individual clients to working at systems and societal levels. Over 80 leaders in their respective topical areas contributed to the book's 33 chapters, including the conceptual foundations and principles of gerontological occupational therapy, bio-psychosocial age-related changes, environmental forces shaping occupational participation for older adults, the continuum of health care as well as implications for communities, and the attributes, ethical responsibilities, and roles involved in gerontological occupational therapy. This edition also covers topical OT issues that are crucially important to an aging population — such as diversity and inclusion, disability and aging, sexuality, technology, telehealth and virtual environments, intergenerational connections, updates on dementia research and caring for someone with dementia, occupational justice and aging, age inclusive communities, and an expanded section on hearing — to ensure your students are well versed in every aspect of this key practice area. - UNIQUE! Intraprofessional and interprofessional approach to intervention emphasizes working holistically and collaboratively in serving older adults. - UNIQUE! Chapter on the wide range of physiological, musculoskeletal, and neurological changes among the aging patient population highlights related occupational performance issues. - Case examples help you learn to apply new information to actual client and community situations. - Chapter on evidence-based practice discusses how to incorporate evidence into clinical or community settings. - Questions at

the end of each chapter can be used for discussion or other learning applications. - UNIQUE! Chapters on nutrition, food insecurity, and oral health explore related challenges faced by older adults. - Chapter on ethics provides a deeper understanding of how to address challenging ethical dilemmas.

occupational therapist acute care: *Occupational Therapy* Alice J. Punwar, 1994 Written in casual, narrative style, this edition contains five new chapters, new case studies, new clinical stories, and discussion questions focusing on ethical, legal, and interpersonal issues. The text introduces students to occupational therapy and to career opportunities in the field. Using clinical examples and case studies, this edition provides a realistic look at the complementary roles of the registered occupational therapist (OTR) and the certified occupational therapy assistants (COTA). *Occupational Therapy: Principles and Practice* illustrates the OT process within various practice settings, including the acute care hospital, public school, and home health practice. Other topics include current and prospective issues in the field, the U.S. health care system, influences/implications of managed care, and the international OT market. All charts/tables reflect current statistics.

occupational therapist acute care: *The Continuum of Stroke Care* Joanne V. Hickey, Sarah Livesay, 2015-03-25 *The Continuum of Stroke Care: An Interprofessional Approach to Evidence-Based Care* will address the clinical care of stroke patients across the continuum of care from primary prevention of stroke, the acute and subacute treatment of stroke syndromes through rehabilitation, and reintegration into the community. Each chapter will review current evidence-based practice guiding clinical stroke care. The book will address the American Stroke Association's Stroke Chain of Survival addressing prehospital care of the stroke patient and the development of stroke systems of care to provide all people in the United States access to acute stroke care. Additionally, the book will cover the current role of state legislation in stroke care and the evolution of hospital stroke certification. The book will serve as a clinical resource providing detailed comprehensive medical and nursing care of all stroke subtypes while also addressing the system of stroke care in which medical, nursing and interprofessional care provided. As such, the book will serve as a clinical resource to medical and nursing caregivers providing direct patient care as well as stroke coordinators, program directors and other hospital administrators developing stroke programs. The book will also be a clinical resource for stroke interprofessional team members such as physical therapists, occupational therapists, Stroke care is most successful at improving patient outcomes when delivered by an interdisciplinary team. Each chapter will address the critical role of the interprofessional team and highlight comprehensive care of the stroke patient rather than focusing only on nursing care. Books published to date focus solely on the medical or nursing care of the stroke patient without attention to the stroke system of care and the role of the multidisciplinary team in improving stroke outcomes. Additionally, each chapter will highlight ongoing research trials and opportunities, with the recognition that the scientific foundation for acute stroke care is rapidly evolving.

occupational therapist acute care: Dreeben-Irimia's Introduction to Physical Therapy Practice for Physical Therapist Assistants Christina M. Barrett, 2019-11-12 Dreeben-Irimia's *Introduction to Physical Therapy Practice for Physical Therapist Assistants*, Fourth Edition introduces students to the role of the physical therapist assistant in physical therapy care.

occupational therapist acute care: The Physical Therapist's Guide to Health Care

Kathleen A. Curtis, 1999 The Physical Therapist's Guide to Health Care is the simple, clear approach to understanding health care in today's changing environment. This book provides a strategy based approach to help physical therapists successfully manage change and meet the challenges of clinical practice in common practice settings. This essential text includes an introduction to health care that covers the basics of health care financing, health care reimbursement systems, cost containment strategies and referral services. Important issues covered in this book include trends in acute, subacute, home health care practice, outcomes management and prevention. Chapters include information on health care reimbursement systems and cost containment strategies, time and caseload management, documentation requirements, quality management in physical therapy, and the role of the physical therapist in prevention and wellness. Check out our new website dedicated to The Physical Therapist's Guide to Health Care. This innovative new website presents valuable up-to-date information as it becomes available. You can visit the site at ptguide.slackinc.com Dr. Kathleen A. Curtis is the winner of the "President's Award of Excellence" for 2005 at California State University, Fresno

occupational therapist acute care: Dreeben-Irimia's Introduction to Physical Therapist Practice for Physical Therapist Assistants Barrett, Christina M. Barrett, 2016-01-22 Preceded by Introduction to physical therapy for physical therapist assistants / Olga Dreeben-Irimia. 2nd ed. 2011.
