saxon math 5 teacher edition: The Well-Trained Mind Susan Wise Bauer, Jessie Wise, 2016-08-09 Is your child getting lost in the system, becoming bored, losing his or her natural eagerness to learn? If so, it may be time to take charge of your child's education—by doing it yourself. The Well-Trained Mind will instruct you, step by step, on how to give your child an academically rigorous, comprehensive education from preschool through high school—one that will train him or her to read, to think, to understand, to be well-rounded and curious about learning. Veteran home educators Susan Wise Bauer and Jessie Wise outline the classical pattern of education called the trivium, which organizes learning around the maturing capacity of the child's mind and comprises three stages: the elementary school "grammar stage," when the building blocks of information are absorbed through memorization and rules; the middle school "logic stage," in which the student begins to think more analytically; and the high-school "rhetoric stage," where the student learns to write and speak with force and originality. Using this theory as your model, you'll be able to instruct your child—whether full-time or as a supplement to classroom education—in all levels of reading, writing, history, geography, mathematics, science, foreign languages, rhetoric, logic, art, and music, regardless of your own aptitude in those subjects. Thousands of parents and teachers have already used the detailed book lists and methods described in The Well-Trained Mind to create a truly superior education for the children in their care. This extensively revised fourth edition contains completely updated curricula and book lists, links to an entirely new set of online resources, new material on teaching children with learning challenges, cutting-edge math and sciences recommendations, answers to common questions about home education, and advice on practical matters such as standardized testing, working with your local school board, designing a high-school program, preparing transcripts, and applying to colleges. You do have control over what and how your child learns. The Well-Trained Mind will give you the tools you'll need to teach your child with confidence and success.

saxon math 5 teacher edition: The Core: Teaching Your Child the Foundations of Classical Education Leigh A. Bortins, 2010-06-08 In the past, correct spelling, the multiplication tables, the names of the state capitals and the American presidents were basics that all children were taught in school. Today, many children graduate without this essential knowledge. Most curricula today follow a haphazard sampling of topics with a focus on political correctness instead of teaching students how to study. Leigh Bortins, a leading figure in the homeschooling community, is having none of it. She believes that there are core areas of knowledge that are essential to master. Without knowing the multiplication tables, children can't advance to algebra. Without mastery of grammar, students will have difficulty expressing themselves. Without these essential building blocks of knowledge, students may remember information but they will never possess a broad and deep understanding of how the world works. In *The Core*, Bortins gives parents the tools and methodology to implement a rigorous, thorough, and broad curriculum based on the classical model, including: - Rote memorization to cement knowledge - Systematic learning of geography, historical facts, and timelines - Reading the great books and seminal historical documents instead of adaptations and abridged editions - Rigorous training in math and the natural sciences

saxon math 5 teacher edition: Tested Linda Perlstein, 2025-03-14 The pressure is on at schools across America. In recent years, reforms such as No Child Left Behind have created a new vision of education that emphasizes provable results, uniformity, and greater attention for floundering students. Schools are expected to behave more like businesses and judged almost solely on the bottom line: test scores. To see if this world is producing better students, Linda Perlstein immersed herself in a suburban Maryland elementary school. The resulting portrait -- detailed, human, and truly thought-provoking -- is marked by the same narrative gifts and expertise that made *Not Much Just Chillin'* so illuminating. The school, once deemed a failure, is now held up as an example of reform done right. Perlstein explores the rewards and costs of that transformation, through the experiences of the people who lived it. Nine-year-olds meditate to activate their brains before exams and kindergartners write paragraphs. Teachers attempt to address diverse needs at the same time they are expected to follow daily scripts, and feel compelled to focus on topics that will be tested at the expense of those that won't. The principal attempts to keep it all together, in the face of immense challenges. Perlstein provides the first detailed view of how new education policies are modified by human realities. Tested will be talked about, thought about, written about -- and will almost certainly play an important role in the national debate as the federal education law come up for renewal.
