sociology coursework: Sociological Foundations of Education Claire Maxwell, Miri Yemini, Laura Engel, 2023-03-23 This volume introduces sociology as a foundational discipline of education. Education is a central structuring mechanism in shaping societies, making it a core focus for sociology. Sociologists study education in its broadest sense - as occurring within families, communities and provided by institutions. The purposes of formal education are contested and these contestations shape broader power relations locally, nationally and globally. Sociologists disaggregate processes within education to examine empirically and theoretically the various levels at which they operate. This allows them to describe and make sense of the ways that relations of inequality are developed, reproduced or unsettled and how these shape individual and group experiences and outcomes. About the Educational Foundations series: Education, as an academic field taught at universities around the world, emerged from a range of older foundational disciplines. The Educational Foundations series comprises six volumes, each covering one of the foundational disciplines of philosophy, history, sociology, policy studies, economics and law. This is the first reference work to provide an authoritative and up-to-date account of all six disciplines, showing how each field's ideas, methods, theories and approaches can contribute to research and practice in education today. The six volumes cover the same set of key topics within education, which also form the chapter titles: - Mapping the Field - Purposes of Education - Curriculum - Schools and Education Systems - Learning and Human Development - Teaching and Teacher Education - Assessment and Evaluation This structure allows readers to study the volumes in isolation, by discipline, or laterally, by topic, and facilitates a comparative, thematic reading of chapters across the volumes. Throughout the series, attention is paid to how the disciplines comprising the educational foundations speak to social justice concerns such as gender and racial equality.

sociology coursework: **Jane Addams and the Men of the Chicago School, 1892-1918**

Mary Jo Deegan, 2017-07-12 Jane Addams is well known for her leadership in urban reform, social settlements, pacifism, social work, and women's suffrage. The men of the Chicago School are well known for their leadership in founding sociology and the study of urban life. What has remained hidden however, is that Jane Addams played a pivotal role in the development of sociology and worked closely with the male faculty at the Department of Sociology at the University of Chicago. By using extensive archival material, Mary Jo Deegan is the first to document Addams's sociological significance and the existence of a sexual division of labor during the founding years of the discipline. As the leader of the women's network, Addams was able to bridge these two spheres of work and knowledge. Through an analysis of the changing relations between the male and female networks, Deegan shows that the Chicago men varied widely in their understanding and acceptance of her sociological thought and action. Despite this variation, it was through her work with the men of the Chicago School that Addams left a legacy for sociology as a way of thinking, an area of study, and a methodological approach to data collecting. This previously unexamined heritage of American sociology will be of value to anyone interested in the history of the social sciences, especially sociology and social work, the development of American social thought, the role of professional women, the Progressive Era, and the intellectual contributions of Jane Addams.

sociology coursework: Towering Above Harlem Steven Gregory, 2025-09-16 Charts racialized and class-based exclusion in Morningside Heights and its surrounding area by elite institutions New York City's storied diversity has also been a story of racialized class discrimination. *Towering Above Harlem* focuses on understudied players in this process: the elite institutions of Morningside Heights—Columbia University, Teachers College and the Riverside Church—to reveal the troubling ways in which they exploited existing geographic features to build a racially and economically exclusive “city on a hill.” In his final book-length work, Steven Gregory explores the long history of economic and racial discrimination in Morningside Heights, beginning in the late 19th century and extending into the present day. This exclusion of the surrounding racial minorities and working-class population has been enacted physically, through the acquisition of property by Columbia and others, but it has also been enacted through a variety of discourses and practices aimed at setting apart the so-called “civilization-building” mission of the elites overlooking Harlem from the racialized others in the vicinity. The book shows that the major institutions of Morningside Heights have since the beginning tried to physically secede from the Black and Puerto Rican communities geographically below the Morningside plateau, while also symbolically rising above them as beacons of progress. The volume charts the coordinated effort among elites to use space to naturalize relations of power and prestige, illuminating the past, present, and uncertain future of racial discrimination and exclusivity in Morningside Heights and in New York City at large.

sociology coursework: Pioneering Paths in the Study of Families Gary W Peterson, Suzanne Steinmetz, 2014-03-18 Meet the men and women whose groundbreaking work elevated the field of family studies! In *Pioneering Paths in the Study of Families: The Lives and Careers of Family Scholars*, you'll find 40 autobiographies written by leading scholars in sociology, family studies, psychology, and child development. From the editors: “These autobiographies document the experiences of scholars from the early twentieth century to the present. The descriptions of early influences on their education, of their graduate school experiences, and of their academic career paths, provides a wealth of valuable material. Since four of these scholars have died and a number are in their eighties or older, these histories provide rich case studies on factors that influence the decision to go to college, get married, pursue an advanced degree, make specific occupational choices, and investigate certain topics. These autobiographies also detail the barriers that early women scholars in the social sciences faced.” The scholars whose lives you will learn about in *Pioneering Paths in the Study of Families* include: Joan Aldous Katherine R. sociology coursework: *Journey to the Ph.D.* Anna L. Green, LeKita V. Scott, 2023-07-03 As a new generation of African Americans completes college, an increasing number of students are aspiring to the Ph.D. as a stepping stone to a career in the academy and to fully participate in shaping our society. Most African Americans are conscious that they are the first in their families to embark on this journey. They are aware they will meet barriers and prejudice, are likely to face isolation and frustration, and find few sources of support along the way. This book, by twenty-four Black scholars who “have been there,” offers a guide to aspiring doctoral students to the formal process and to the personal, emotional and intellectual challenges they are likely to face. The authors come from a wide range of disciplines – from computing, education and literature to science and sociology. Although their experiences and backgrounds are as varied as they are as individuals, their richly diverse chapters cohere into a rounded guide to the issues for those who follow in their footsteps. From questioning the reader about his or her reasons for pursuing a doctorate, offering advice on financial issues, the choice of university and doctoral program, and relocation, through the process and timetable of application, interviews, acceptance and rejection, the authors go on to describe their own journeys and the lessons they have learned. These men and women write candidly about their experiences, the strategies they used to maintain their motivation, make the transition from HBCUs to PWIs, balance family and work, make the right choices and keep focussed on priorities. They discuss how to work effectively with advisors and mentors, make all-important connections with teachers and build professional and personal support networks. They recount how they dealt with tokenism, established credibility, handled racism, maintained their values and culture, and persuaded supervisors to legitimize their research interests in African American issues.

This is both an inspirational and practical book for every African American considering pursuit of a doctoral degree.
