star early literacy practice workbook: Inclusive Education Aimee Howley, Cassondra M. Faiella, Stephen D. Kroeger, Barbara Hansen, 2020-01-01 This book answers two questions: What does the implementation of inclusive education require of a system of education and all parts of the system? How do various parts of the education system act on their commitment to inclusive educational practice? Decades after major legislation (i.e., the Civil Rights Act, the Elementary and Secondary Education Act, and the Education for All Handicapped Children Act) made high-quality education a fundamental right for all children in the United States, the dream of diverse, inclusive, democratic schooling has yet to be realized. Nevertheless, some classrooms, schools, districts, states, and universities have made progress. *Inclusive Education: A Systematic Perspective* explores the theoretical implications of inclusive practice as well as illustrative case studies and evaluation

findings from states, educator preparation programs, districts, and schools that have reframed their work around the principles of inclusive practice. Whether these organizations position the work as “social justice education,” “culturally responsive teaching,” or “inclusion,” their efforts lead in the same direction—toward higher quality and more equitable education for all. The chapters will be relevant to graduate students, faculty members, and education leaders, at all levels, who seek a comprehensive overview of the commitment and practice of “inclusive education”. Chapters vary in their approaches to the topic, some presenting theoretical underpinnings, others describing practices or programs at particular sites, others reporting findings from empirical studies, and edited interviews with state and district leaders of inclusive-education initiatives. The book explores why inclusion is important and how it can be accomplished.

A McAfee reviewer is likely to switch for the same reason.

star early literacy practice workbook: The Green Book of Language Revitalization in Practice Leanne Hinton, Kenneth Hale, 2013-06-13 With world-wide environmental destruction and globalization of economy, a few languages, especially English, are spreading rapidly in use, while thousands of other languages are disappearing, taking with them important cultural, philosophical and environmental knowledge systems and oral literatures. We all stand to suffer from such a loss, none more so than the communities whose very identity is being threatened by the impending death of their languages. In response to this crisis, indigenous communities around the world have begun to develop a myriad of projects to keep their languages alive. This volume is a set of detailed accounts about the kind of work that is going on now as people struggle for their linguistic survival. It also serves as a manual of effective practices in language revitalization. Following are the key features: 23 case studies of language revitalization in practice, from Native American languages, Australian languages, Maori, Hawaiian, Welsh, Irish, and others, written primarily by authors directly involved in the programs; short introductions situate the languages, to help make the languages more 'real' in the minds of readers; each chapter gives a detailed overview of the various kinds of programs and methods in practice today; introductions and maps for each of the languages represented familiarize the reader with their history, linguistic structure and sociolinguistic features; and, strong representation in authorship and viewpoint of the people and communities whose languages are threatened, gives the readers an inside understanding of the issues involved and the community-internal attitudes toward language loss and revitalization. This book was previously published by Academic Press under ISBN 978-01-23-49354-5.

star early literacy practice workbook: Equipping Space Cadets Emily Midkiff, 2022-04-19 Winner of the 2023 Science Fiction Research Association (SFRA) Book Award 2022 Longlist Nominee for the Best Non-Fiction Award from the British Science Fiction Association Equipping Space Cadets: Primary Science Fiction for Young Children argues for the benefits and potential of "primary science fiction," or science fiction for children under twelve years old. Science fiction for children is often disregarded due to common misconceptions of childhood. When children are culturally portrayed as natural and simple, they seem like a poor audience for the complex scientific questions brought up by the best science fiction. The books and the children who read them tell another story. Using three empirical studies and over 350 children's books including *If I Had a Robot Dog*, *Bugs in Space*, and *Commander Toad in Space*, Equipping Space Cadets presents interdisciplinary evidence that science fiction and children are compatible after all. Primary science fiction literature includes many high-quality books that cleverly utilize the features of children's literature formats in order to fit large science fiction questions into small packages. In the best of these books, authors make science fiction questions accessible and relevant to children of various reading levels and from diverse backgrounds and identities. Equipping Space Cadets does not stop with literary analysis, but also presents the voices of real children and practitioners. The book features three studies: a survey of teachers and librarians, quantitative analysis of lending records from school libraries across the United States, and coded read-aloud sessions with elementary school students. The results reveal how children are interested in and capable of reading science fiction, but it is the adults, including the most well-intentioned librarians and teachers, who hinder children's engagement with the genre due to their own preconceptions about the genre and children.
