

the age of sustainable development

the age of sustainable development marks a transformative era in global history, focusing on balancing economic growth, social inclusion, and environmental protection. This period emphasizes the critical need to adopt practices that meet present needs without compromising the ability of future generations to fulfill their own. As climate change, resource depletion, and social inequalities intensify, the age of sustainable development calls for integrated approaches that foster resilience and long-term prosperity. In this article, we explore the origins, principles, challenges, and strategies associated with sustainable development. Additionally, the role of policy, technology, and global cooperation is examined to understand how societies can transition effectively into this new age. The discussion also highlights key sectors impacted by sustainable development and the importance of measuring progress through innovative indicators. Below is an outline of the main topics covered.

- The Origins and Principles of Sustainable Development
- Environmental Challenges in the Age of Sustainable Development
- Economic Strategies for Sustainable Growth
- Social Dimensions and Equity Considerations
- Technological Innovations Driving Sustainability
- Global Governance and Policy Frameworks
- Measuring Progress: Indicators and Reporting

The Origins and Principles of Sustainable Development

The age of sustainable development is rooted in historical efforts to address the interconnected challenges of economic growth, social welfare, and environmental stewardship. The concept gained widespread recognition following the 1987 Brundtland Report, which defined sustainable development as development that meets the needs of the present without compromising the ability of future generations to meet their own needs. This foundational definition set the stage for a global agenda emphasizing long-term ecological balance, social equity, and economic viability.

The core principles guiding sustainable development include intergenerational equity, integration of environmental and economic policies, and participatory governance. Sustainable development advocates for systems thinking, recognizing that natural, social, and economic systems are interdependent and must be managed holistically.

Key Principles of Sustainable Development

- **Intergenerational Equity:** Ensuring that future generations inherit a healthy planet with

access to resources.

- **Integration:** Combining environmental, economic, and social objectives in policymaking.
- **Precautionary Approach:** Acting proactively to prevent environmental degradation even in the face of uncertainty.
- **Participation:** Involving all stakeholders, including marginalized communities, in development decisions.
- **Conservation of Biodiversity and Ecosystems:** Protecting natural habitats to maintain ecosystem services essential for life.

Environmental Challenges in the Age of Sustainable Development

Environmental degradation remains one of the most pressing challenges of the age of sustainable development. Issues such as climate change, deforestation, pollution, biodiversity loss, and water scarcity threaten the resilience of ecosystems and human well-being. These challenges require urgent and coordinated action at local, national, and global levels.

Climate change, driven by greenhouse gas emissions from industrial activity and deforestation, has led to rising global temperatures, extreme weather events, and sea-level rise. These impacts disproportionately affect vulnerable populations, exacerbating social inequalities and economic instability.

Major Environmental Concerns

- **Climate Change:** Increasing frequency of droughts, floods, and storms affecting agriculture and infrastructure.
- **Deforestation:** Loss of forests reducing carbon sequestration and threatening biodiversity.
- **Pollution:** Air, water, and soil contamination harming human health and ecosystems.
- **Biodiversity Loss:** Extinction of species affecting ecosystem functionality and resilience.
- **Water Scarcity:** Over-extraction and contamination of freshwater resources limiting availability.

Economic Strategies for Sustainable Growth

Economic development in the age of sustainable development involves transitioning to models that decouple growth from environmental harm. This requires adopting green technologies, promoting resource efficiency, and encouraging circular economy practices. Sustainable economic strategies aim to create jobs, reduce poverty, and foster innovation while minimizing the ecological footprint.

Investment in renewable energy, sustainable agriculture, and eco-friendly infrastructure supports economic resilience and reduces dependency on finite resources. The integration of environmental costs into market mechanisms, such as carbon pricing, incentivizes cleaner production and consumption patterns.

Approaches to Sustainable Economic Development

- **Green Economy:** Economic activities that result in improved human well-being and social equity while reducing environmental risks.
- **Circular Economy:** Designing products and systems that promote reuse, recycling, and waste reduction.
- **Inclusive Growth:** Ensuring economic benefits are widely shared across populations.
- **Investment in Clean Technology:** Supporting innovation in renewable energy, energy efficiency, and sustainable transport.
- **Environmental Fiscal Reform:** Using taxes and subsidies to encourage sustainable practices.

Social Dimensions and Equity Considerations

The age of sustainable development emphasizes social inclusion and equity as fundamental components of sustainability. Addressing poverty, inequality, education, health, and human rights is essential for achieving durable development outcomes. Social sustainability ensures that all individuals have access to opportunities and resources necessary for a decent quality of life.

Empowering marginalized groups, promoting gender equality, and fostering community participation strengthen social cohesion and resilience. Sustainable development recognizes that social justice and environmental health are intrinsically linked, as vulnerable populations often bear the brunt of ecological degradation.

Key Social Sustainability Issues

- **Poverty Alleviation:** Reducing extreme poverty through access to education, healthcare, and economic opportunities.
- **Gender Equality:** Ensuring equal rights and participation for women in all development

sectors.

- **Access to Education:** Promoting lifelong learning and skill development to support sustainable livelihoods.
- **Health and Well-being:** Addressing social determinants of health linked to environmental conditions.
- **Community Engagement:** Facilitating participatory decision-making to reflect diverse needs and priorities.

Technological Innovations Driving Sustainability

Technological advancement plays a pivotal role in the age of sustainable development by providing solutions to complex environmental and social challenges. Innovations in clean energy, smart infrastructure, waste management, and data analytics enable more efficient resource use and improved monitoring of sustainability goals.

Emerging technologies such as artificial intelligence, the Internet of Things, and biotechnology support adaptive management and enhance the capacity to respond to dynamic environmental conditions. However, technology must be deployed responsibly, ensuring equitable access and minimizing unintended consequences.

Examples of Sustainable Technologies

- **Renewable Energy Systems:** Solar, wind, hydro, and geothermal power reducing reliance on fossil fuels.
- **Smart Grids:** Enhancing energy distribution efficiency and integrating variable renewable energy sources.
- **Waste-to-Energy Technologies:** Converting waste materials into usable energy, reducing landfill use.
- **Precision Agriculture:** Using sensors and data analytics to optimize farming inputs and minimize environmental impact.
- **Water Purification and Recycling:** Technologies that improve water quality and promote reuse.

Global Governance and Policy Frameworks

Effective governance frameworks are essential to guide the age of sustainable development by

establishing international norms, standards, and cooperation mechanisms. Global agreements such as the United Nations Sustainable Development Goals (SDGs) provide a comprehensive agenda for countries to align their policies and monitor progress.

Multilateral institutions, national governments, and civil society organizations collaborate to coordinate actions that address transboundary environmental issues and promote sustainable economic and social policies. Policy coherence, transparency, and accountability enhance the effectiveness of governance systems.

Key International Frameworks and Initiatives

- **United Nations Sustainable Development Goals (SDGs):** A universal call to action encompassing 17 goals to end poverty, protect the planet, and ensure prosperity for all.
- **Paris Agreement:** A global pact to limit global warming through nationally determined contributions to reduce greenhouse gas emissions.
- **Convention on Biological Diversity:** An international treaty to conserve biodiversity and promote sustainable use of natural resources.
- **Agenda 2030:** A roadmap for sustainable development integrating economic, social, and environmental objectives.
- **National Sustainability Policies:** Frameworks that integrate sustainable development principles into domestic legislation and planning.

Measuring Progress: Indicators and Reporting

Tracking progress in the age of sustainable development requires robust indicators and transparent reporting mechanisms. Traditional economic metrics such as GDP are insufficient to capture the multidimensional nature of sustainability. Therefore, composite indexes and sustainability indicators have been developed to assess environmental health, social well-being, and economic performance.

Data collection and analysis enable policymakers and stakeholders to identify gaps, allocate resources effectively, and adjust strategies to enhance sustainability outcomes. International cooperation facilitates the harmonization of measurement standards and sharing of best practices.

Common Sustainability Indicators

1. **Environmental Indicators:** Carbon emissions, air and water quality, biodiversity status, and energy consumption.
2. **Social Indicators:** Poverty rates, education levels, health outcomes, and gender equality metrics.

3. **Economic Indicators:** Employment rates in green sectors, resource productivity, and investment in sustainable technologies.
4. **Composite Indexes:** Human Development Index (HDI), Environmental Performance Index (EPI), and Sustainable Development Goal (SDG) Index.
5. **Reporting Frameworks:** Voluntary national reviews (VNRs), corporate sustainability reports, and environmental impact assessments.

Frequently Asked Questions

What is the main focus of 'The Age of Sustainable Development'?

The main focus of 'The Age of Sustainable Development' is to explore the principles and practices of sustainable development, addressing the interconnected challenges of economic growth, social inclusion, and environmental protection.

Who is the author of 'The Age of Sustainable Development'?

The author of 'The Age of Sustainable Development' is Jeffrey D. Sachs, a renowned economist and sustainable development expert.

Why is sustainable development important in the modern world?

Sustainable development is important because it aims to meet the needs of the present without compromising the ability of future generations to meet their own needs, ensuring long-term environmental health, economic prosperity, and social equity.

What are the three pillars of sustainable development discussed in 'The Age of Sustainable Development'?

The three pillars are economic development, social inclusion, and environmental sustainability, which together support a balanced approach to development.

How does 'The Age of Sustainable Development' address climate change?

The book discusses climate change as a critical challenge that requires global cooperation, innovation in clean energy, and policies to reduce carbon emissions to ensure a sustainable future.

Can sustainable development help reduce poverty?

Yes, sustainable development promotes inclusive economic growth and social policies that aim to eradicate poverty while protecting natural resources for future generations.

What role do education and technology play in sustainable development according to the book?

Education and technology are vital for empowering individuals, fostering innovation, and enabling the transition to sustainable practices and green technologies.

How is global cooperation emphasized in 'The Age of Sustainable Development'?

The book emphasizes that global challenges like climate change, poverty, and inequality require coordinated international efforts and partnerships among governments, businesses, and civil society.

What solutions does 'The Age of Sustainable Development' propose for achieving sustainability?

The book proposes integrated policies that combine economic development, social inclusion, and environmental stewardship, alongside investments in clean energy, education, and sustainable infrastructure.

How does 'The Age of Sustainable Development' relate to the United Nations Sustainable Development Goals (SDGs)?

The book provides a comprehensive framework that aligns with and supports the UN SDGs, offering insights into how these goals can be achieved through sustainable development practices worldwide.

Additional Resources

1. The Age of Sustainable Development by Jeffrey D. Sachs

This foundational book explores the interconnected challenges of economic development, social inclusion, and environmental sustainability. Sachs provides a comprehensive overview of the principles and practices necessary to achieve sustainable development globally. The book combines theory with practical insights, addressing issues such as poverty, climate change, and global health.

2. Sustainability by Design: Subversive Strategy for Transforming Our Consumer Culture by John R. Ehrenfeld

Ehrenfeld challenges conventional approaches to sustainability, urging readers to rethink the cultural and ethical dimensions of consumption. He argues that true sustainability requires a profound shift in values rather than just technological or policy solutions. The book offers a philosophical perspective on how design and innovation can foster a sustainable future.

3. Prosperity without Growth: Foundations for the Economy of Tomorrow by Tim Jackson

Jackson critically examines the assumption that economic growth is essential for prosperity, proposing

an alternative model that decouples well-being from material consumption. The book discusses the environmental and social limits of growth and suggests pathways for creating a sustainable economy. It is an influential work in the field of ecological economics.

4. *Our Common Future* by the World Commission on Environment and Development (Brundtland Report)

This landmark report introduced the concept of sustainable development to a global audience, defining it as development that meets the needs of the present without compromising the ability of future generations to meet their own needs. It highlights the interdependence of economic development, social equity, and environmental protection. The report laid the groundwork for subsequent international environmental policies.

5. *Drawdown: The Most Comprehensive Plan Ever Proposed to Reverse Global Warming* edited by Paul Hawken

Drawdown compiles research from scientists and policymakers to present practical solutions for reducing greenhouse gas emissions and reversing climate change. The book ranks 100 solutions based on their potential impact and feasibility, ranging from renewable energy to regenerative agriculture. It serves as a hopeful and actionable guide for individuals and governments alike.

6. *Cradle to Cradle: Remaking the Way We Make Things* by William McDonough and Michael Braungart

This innovative book proposes a new framework for production and consumption that mimics natural processes, emphasizing waste elimination and resource circularity. The authors advocate for designing products with their entire lifecycle in mind, promoting sustainability through creativity and innovation. It has been influential in the fields of sustainable design and manufacturing.

7. *Natural Capitalism: Creating the Next Industrial Revolution* by Paul Hawken, Amory Lovins, and L. Hunter Lovins

Natural Capitalism argues for a fundamental transformation of business practices to account for the value of natural resources and ecosystem services. The authors outline strategies for increasing resource productivity, investing in natural capital, and redesigning production systems. The book provides a compelling case for aligning economic success with environmental stewardship.

8. *The Blue Economy: 10 Years, 100 Innovations, 100 Million Jobs* by Gunter Pauli

Pauli presents a vision of sustainable economic development based on innovative, locally adapted solutions that utilize available resources efficiently. The Blue Economy emphasizes entrepreneurship and innovation to create jobs and address environmental challenges simultaneously. It offers numerous case studies demonstrating how sustainable business models can thrive.

9. *Global Environmental Politics* by Pamela S. Chasek, David L. Downie, and Janet Welsh Brown

This textbook provides an in-depth analysis of the political dynamics shaping global environmental governance and sustainable development efforts. It covers key international agreements, institutions, and actors involved in addressing environmental issues. The book is essential for understanding the complexities of policy-making in the age of sustainable development.

the age of sustainable development: *The Age of Sustainable Development* Jeffrey D. Sachs, 2015-03-10 Jeffrey D. Sachs has shown himself to be one of the world's most perceptive and original analysts of global development in his groundbreaking books, including *The End of Poverty* and *Common Wealth: Economics for a Crowded Planet*. Now, in this major new work he presents a compelling and practical framework for how global citizens can address the seemingly intractable worldwide problems of persistent extreme poverty, environmental degradation, and political-economic injustice. Sachs outlines the holistic way forward: sustainable development. This provocative work offers readers, students, activists, environmentalists, and policy makers the tools, metrics, and practical pathways they need to achieve Sustainable Development Goals. Far more than a rhetorical exercise, this book is designed to inform, inspire, and spur action. Based on Sachs's twelve years as director of the Earth Institute at Columbia University, his thirteen years advising the United Nations secretary-general on the Millennium Development Goals, and his recent presentation of these ideas in a popular online course, *The Age of Sustainable Development* is a landmark publication and a clarion call for all who care about our planet and global justice.

the age of sustainable development: *The Age of Sustainable Development* Jeffrey Sachs, Ban Ki-Moon, 2015

the age of sustainable development: *Literacy for Sustainable Development in the Age of Information* Naz Rassool, 1999-01-01 This text discusses the complexities that surround literacy in the modern world. It examines prevailing definitions and views of literacy and evaluates these against the technological skills and knowledge demands of the information society. Within a world increasingly concerned about sustainable development, the book highlights the importance of multiliteracies and adequate levels of communicative competence in facilitating effective participation in the democratic process.

the age of sustainable development: *Fostering Sustainable Development in the Age of Technologies* Rohit Sharma, Anjali Shishodia, Ashish Gupta, 2023-12-13 *Fostering Sustainable Development in the Age of Technologies* highlights the interplay between various disruptive technologies such as Artificial Intelligence, Autonomous robots, Big Data Analytics, Blockchain, Cloud Computing, and Digital Twins, and holistic sustainable development.

the age of sustainable development: *The Ages of Globalization* Jeffrey D. Sachs, 2020-06-02 Today's most urgent problems are fundamentally global. They require nothing less than concerted, planetwide action if we are to secure a long-term future. But humanity's story has always been on a global scale. In this book, Jeffrey D. Sachs, renowned economist and expert on sustainable development, turns to world history to shed light on how we can meet the challenges and opportunities of the twenty-first century. Sachs takes readers through a series of seven distinct waves of technological and institutional change, starting with the original settling of the planet by early modern humans through long-distance migration and ending with reflections on today's globalization. Along the way, he considers how the interplay of geography, technology, and institutions influenced the Neolithic revolution; the role of the horse in the emergence of empires; the spread of large land-based empires in the classical age; the rise of global empires after the opening of sea routes from Europe to Asia and the Americas; and the industrial age. The dynamics of these past waves, Sachs demonstrates, offer fresh perspective on the ongoing processes taking place in our own time—a globalization based on digital technologies. Sachs emphasizes the need for new methods of international governance and cooperation to prevent conflicts and to achieve economic, social, and environmental objectives aligned with sustainable development. *The Ages of Globalization* is a vital book for all readers aiming to make sense of our rapidly changing world.

the age of sustainable development: *Sustainable Urban Development in the Age of*

Climate Change Ali Cheshmehzangi, Ayotunde Dawodu, 2018-09-28 This book considers the impact of climate change on cities, advocating that people are the panaceas and antidote to mitigating climate change, by enhancing their involvement in achieving sustainable development Goals (SDGs). This leads to the development of an SDG best practice participation template, which is supported by an extensive checklist of the 'whats' and 'hows' in participatory processes. Using case studies, extensive literature reviews and meta-analysis to make a case for a people-centric and integrated approach to sustainable urban development, it examines the role of governance in climate change, focusing on decision making processes, policies and regulations, as well as focusing on the significance of a people-oriented approach on climate change and cities. Through an extensive global outlook, this book highlights bottom-up methods of implementing and achieving sustainable urban development in the age of climate change. These highlights should help to develop new mindsets, new strategies, new directions and new policies, through which we can see a more sustainable approach to urbanisation and urban development globally, which can start 'equipping future generations with the tools for them to help their future generations'.

the age of sustainable development: Global Law of Sustainable Development Halil Göksan, 2024-12-14 This book discusses the emergence of a new concept of law at the global level in the field of sustainable development. It examines the four-decade-long evolution of the concept of sustainable development from the Stockholm Conference of 1972 until the adoption of the Sustainable Development Goals in 2015. It brings forward a step-by-step guide for exploring the law-like quality of global norms from a legal positivist and legal pluralist perspective.

the age of sustainable development: *The Dilemma of Sustainability in the Age of Globalization* Mohamed El-Kamel Bakari, 2017-09-05 *The Dilemma of Sustainability in the Age of Globalization: A Quest for a Paradigm of Development* offers an exhaustive overview of the different political, social, economic, and cultural circumstances that paved the way for the inception of sustainable development. It particularly traces the evolution of this project in an unpropitious context of neo-liberal capitalism and globalization. By means of an in-depth critical comparative analysis of the two phenomena of sustainable development and globalization, this book highlights aspects of both their divergence and convergence on issues such as development, man-nature relationship, and society. This distinctive approach pinpoints the theoretical and factual aspects of clash and affinity between globalization and sustainability and spotlights some potential harmonization between the two on different levels. On the whole, this book covers a few gaps in the contemporary literature that heightened the need for analysis of the viability of implementing the project of sustainable development in a context of neoliberal capitalism. Given the highly interdisciplinary nature of its topic, a holistic approach is utilized throughout this book, integrating historical, literary, economic, political, and scientific material. The first part of this book is largely based on a critical comparative analysis of the two vying paradigms of development by means of a thorough juxtaposition of their theoretical and ideological underpinnings and backed up by lucid examples, statistics, and case-studies. In later sections, this book provides an analysis and discussion of both the extrinsic and intrinsic obstacles to promoting sustainability in the current socio-economic paradigm of development, and closes by offering glimpses of hope for the future of humankind by underlining the potential of new initiatives to revive sustainable development in the 21st century.

the age of sustainable development: *The Law of Energy for Sustainable Development* IUCN Academy of Environmental Law. Colloquium, 2005 The research focus for the IUCN Academy of Environmental Law in 2003 was a timely and challenging one, entitled 'The Law of Energy for Sustainable Development'. As contemporary world politics demonstrates, energy resources and generation are crucial issues facing the international community. As research on energy law, at the international, regional, and national level is in its infancy, the insights provided by the contributors to this 2005 volume are a significant addition to the field.

the age of sustainable development: *An Agenda for Sustainable Development Research* Walter Leal Filho, Amanda Lange Salvia, Claudio Ruy Portela de Vasconcelos, 2024-09-20 This book involves establishing a set of priorities and a roadmap that can guide scholarly and practical efforts

towards sustainability goals. It encourages collaboration across disciplines to address complex sustainability issues that span social, economic, and environmental domains. It also supports the development of robust methodologies for conducting research, including quantitative, qualitative, and mixed methods approaches. But despite the importance of and the need for an agenda for sustainable development research, many efforts are isolated and thematically disconnected. Also, it is difficult to find information on how sustainability research is being undertaken and on the wide range of methods being used. Against this backdrop and in order to facilitate a broad discussion on the contribution of sustainable development research, this book is being produced. The book gathers inputs from universities and research organisations working on matters related to sustainable development research in a variety of contexts. It also provides a platform for the dissemination of information on the latest initiatives, paving the way for technology transfer and networking. Furthermore, the book intends to provide a fertile basis upon which universities, research centres, and practitioners may cooperate more closely in this key area. Last but not least, a further aim of the book is to present methodological approaches and experiences deriving from case studies and projects, which aim to show how sustainability research may be implementing across a range of disciplines. Thanks to its scope and interdisciplinarity, this books makes an excellent reading to everyone interested on sustainability research.

the age of sustainable development: *Evolution of environmental economics & management in the age of artificial intelligence for sustainable development* Elena G. Popkova, Bruno Sergi, Aleksei V. Bogoviz, 2023-06-06

the age of sustainable development: Social Entrepreneurship and Sustainable Development Archana Singh, Edakkandi Meethal Reji, 2020-06-13 This volume discusses the seminal interface between social entrepreneurship and sustainable development along with their inter-linkages. It traces the role of social entrepreneurship and innovations in societal transformation in creating sustainable societies, especially in developing nations. It explores how social entrepreneurship and enterprise is integral to the promise of fostering opportunities for socially disadvantaged groups (including the poor, women, and young people), as well as in addressing environmental and ecological issues apart from wealth creation. The book presents key concepts, case studies, and multiple innovative models involving social entrepreneurship, such as green financing, serial social entrepreneurship, sustainable livelihood creation, and well-being, in addition to highlighting global sustainable development goals of the United Nations. The chapters are organised under the broad themes of sustainability of the organisation, sustainability of the community, sustainability of the development, and sustainability of the community-organisation interface. They examine social change, social innovation, social enterprise, small and micro-enterprises, microfinance institutions, inclusive growth, education, productivity, physical health, waste management, energy retention, self-reliance, and corporate social responsibility. They contain emerging research issues in the field as well as critical assessments while bringing together theoretical and practitioners' perspectives. This book will be useful to scholars and researchers of development studies, social entrepreneurship, sustainable development, environmental studies, public policy, and political sociology. It will also greatly interest professionals from non-profit, corporate, and public sectors, other development practitioners, and international bodies.

the age of sustainable development: Sustainability and Sustainable Development Lisa Benton-Short, 2023-02-23 The challenge in teaching an introductory course on sustainability is there are many ways to teach it, and many issues to cover. The United Nations Sustainable Development Goals offer a cohesive and interconnected set of topics to help address this problem – indeed the SDGs are now the guiding framework for planning and implementing sustainability through 2030. They are the focus of international development efforts, and the lingua franca of sustainability as a field of study, the international consensus on “what is sustainability?” As such, the UN SDGs present an ideal framework for an introductory level textbook because taken together, they integrate the “Three Es”—environment, economic development, and equity—that are the core definition of sustainability. This book introduces students to sustainability structured around the 17 UN SDGs.

Through a global perspective, with attention given equally to how sustainability challenges the highest income countries of the Global North, as well as to the moderate- and low-income countries of the Global South, Benton-Short synthesizes basic environmental science, policy, and interdisciplinary perspectives while investigating key challenges to developing a more sustainable future through the SDG framework. Readers will easily tackle this complex set of topics through an accessible writing style, comprehensive scholarship, and diverse perspectives. Guided by a lush art program, complete with numerous maps, figures, and photos to enliven the presentation, students will develop a greater understanding of the important trends in sustainability in the twenty-first century. The broad arguments highlighted through numerous case studies and boxes prepare global citizens to grapple with the environmental, social, economic, and political challenges that face our collective future. Features of this exciting, brand-new text include: Chapter opening learning objectives to guide students' course goals Helpful study aids such as key terms—bolded in the text and compiled both at the end of each chapter and in a comprehensive glossary End-of-chapter questions for discussion and activities to promote active learning A stunning art program, with detailed maps, figures, tables, and photos, to engage students as visual learners Critical Perspectives and Expert Voice boxes to present the diverse perspectives in sustainability Interconnections boxes to help students tie together ideas across the issues Key Terms and Concepts and Understanding the Issue boxes to go in-depth on important topics Making Progress and Solutions boxes that show students hopeful trends toward seemingly intractable problems SDGs and the Law boxes that provide a legal and governance context.

the age of sustainable development: Sustainable Development Goals in Southeast Asia and ASEAN, 2019-01-14 The international community has come together to pursue certain fundamental, common goals over the coming period to 2030 to make progress toward ending poverty and hunger, improving social and economic well-being, preserving the environment and combating climate change, and maintaining peace. The Sustainable Development Goals (SDGs) have been agreed to by states, which have in turn adopted national targets and action plans. This volume studies the governance and implementation of these goals in Southeast Asia, in particular the difficulties in the shift from the international to the national, the multi-level challenges of implementation, and the involvement of stakeholders, civil society, and citizens in the process. Contributors to this volume are scholars from across Southeast Asia who research these issues in developing (Cambodia, Laos, Myanmar), middle-income (Indonesia, Malaysia, Philippines, Thailand, Vietnam), and developed countries (Brunei, Singapore) in the region. The perspectives on governance and the SDGs emerge from the fields of political science, international relations, geography, economics, law, health, and the natural sciences.

the age of sustainable development: Rethinking Economics Starting from the Commons Valentina Rotondi, Paolo Santori, 2023-02-20 This book proposes a new approach to economics, starting from the commons and based on the Economy of Francesco (EoF), a worldwide movement of young people who aim to change the current economic models and working towards a fair, sustainable, and inclusive economic system. EoF was convened by Pope Francis and is inspired by the example of St. Francis of Assisi, featuring Franciscan economic roots and institutions, as well as theories of the social sciences. The authors raise and answer several important questions throughout the volume, such as: What if the economic courses taught in the universities across the globe focused their attention on the topics of the commons rather than on private goods? What if social businesses, rather than being considered as a hybrid form of businesses, became the normal approach, and ethical and green finance ruled over the standard financial sector? Is it possible to move away from the primacy of the consumers to the preeminence of ethical consumers who express their preferences for an inclusive, sustainable, and workers-friendly economic system with their daily choices? Using a unique approach, the book includes the contributions of prominent scholars which are integrated and discussed by young international scholars, providing a fresh analysis with a glance of hope for the future. The book is a must-read for students, scholars, and researchers of economics and related disciplines interested in alternatives to the current economic mainstream in

general, and the Economy of Francesco in particular.

the age of sustainable development: Learning in the Age of Digital and Green

Transition Michael E. Auer, Wolfgang Pachatz, Tiia Rüttemann, 2023-02-22 We are currently witnessing a significant transformation in the development of education on all levels and especially in post-secondary education. To face these challenges, higher education must find innovative ways to quickly respond to these new needs. These were the aims connected with the 25th International Conference on Interactive Collaborative Learning (ICL2022), which was held in Vienna, Austria, from September 27 to 30, 2022. Since its beginning in 1998, this conference is devoted to new approaches in learning with a focus on collaborative learning in higher education. This book contains papers in the fields of: • New Learning Models and Applications • Project-Based Learning • Engineering Pedagogy Education • Research in Engineering Pedagogy • Teaching Best Practices • Real World Experiences • Academia-Industry Partnerships • Trends in Master and Doctoral Research. Interested readership includes policymakers, academics, educators, researchers in pedagogy and learning theory, school teachers, the learning industry, further and continuing education lecturers, etc.

the age of sustainable development: The Palgrave Handbook of Development

Cooperation for Achieving the 2030 Agenda Sachin Chaturvedi, Heiner Janus, Stephan Klingebiel, Xiaoyun Li, André de Mello e Souza, Elizabeth Sidiropoulos, Dorothea Wehrmann, 2020-11-30 This open access handbook analyses the role of development cooperation in achieving the 2030 Agenda in a global context of 'contested cooperation'. Development actors, including governments providing aid or South-South Cooperation, developing countries, and non-governmental actors (civil society, philanthropy, and businesses) constantly challenge underlying narratives and norms of development. The book explores how reconciling these differences fosters achievement of the Sustainable Development Goals.

the age of sustainable development: An Introduction to the Geography of Tourism

Velvet Nelson, 2021-03-12 Tourism is an astonishingly complex phenomenon that is becoming an ever-greater part of life in today's global world. This clear and engaging text introduces students to this vast and diverse subject through the lens of geography, the only field with the breadth to consider all of the aspects, activities, and perspectives that constitute tourism.

the age of sustainable development: Universities and the Sustainable Development

Future Peter H. Koehn, Juha I. Uitto, 2017-04-07 Since the mid-1970s, a series of international declarations that link environment and sustainable development to all aspects of higher learning have been endorsed and signed by universities around the world. Although university involvement in sustainable-development research and outreach has increased substantially, systematic learning from higher-education engagements has been limited. Universities and the Sustainable Development Future offers institutions of higher learning around the world practical guidelines that can be applied contextually to produce credible evidence regarding the outcome and impact of their teaching, research, and transnational-partnering activities. Drawing on innovative applications of lessons from experience with international-development cooperation, this book demonstrates the utility of a flexible framework that will inspire substantial improvements in the ways universities evaluate and improve their sustainable-development undertakings aimed at promoting Agenda 2030. This book promotes an inclusive evaluation framework that will allow universities to illuminate sustainable-development outcomes, and it provides a cutting-edge resource for students, scholars, and policy makers with an interest in sustainable development, climate change, and evaluation challenges.

the age of sustainable development: *Getting Out of Darkness* Hernán Ocampo S. Ph.D.,

2024-09-30 Many policies from the Trump administration (2017-2020) were controversial and stirred the political landscape. Discover which policies deviated from orthodox theories, causing confusion and division among the American electorate. Gain insights into 21st-century socialism and the threats it poses to capitalism in the USA and globally. Evaluate the extent of these threats and how they may mislead voters into making poor choices, avoid that using this book as a beacon to navigate

the darkness of misinformation.
