From Troy to Hiroshima, moments when war has ended in utter annihilation have reverberated through the centuries, signaling the end of political systems, cultures, and epochs. Though much has changed over the millennia, human nature remains the same. Modern societies are not immune from the horror of a war of extinction. In *The End of Everything*, military historian Victor Davis Hanson narrates a series of sieges and sackings that span the age of antiquity to the conquest of the New World to show how societies descend into barbarism and obliteration. In the stories of Thebes, Carthage, Constantinople, and Tenochtitlan, he depicts war’s drama, violence, and folly. Highlighting the naivete that plagued the vanquished and the wrath that justified mass slaughter, Hanson delivers a sobering call to contemporary readers to heed the lessons of obliteration lest we blunder into catastrophe once again.

the end of everything book: *The Evolution of Everything* Brian Villmoare, 2022-11-24 Big History seeks to retell the human story in light of scientific advances by such methods as radiocarbon dating and genetic analysis. This book provides a deep, causal view of the forces that have shaped the universe, the earth, and humanity. Starting with the Big Bang and the formation of the earth, it traces the evolutionary history of the world, focusing on humanity's origins. It also explores the many natural forces shaping humanity, especially the evolution of the brain and behaviour. Moving through time, the causes of such important transformations as agriculture, complex societies, the industrial revolution, the enlightenment, and modernity are placed in the context of underlying changes in demography, learning, and social organization. Humans are biological creatures, operating with instincts evolved millions of years ago, but in the context of a rapidly changing world, and as we try to adapt to new circumstances, we must regularly reckon with our deep past.

the end of everything book: *Existence and Evolution of Everything* Sunil Kumar, 2023-07-19 Have you ever been speechless when someone asked you, "Who came first, the hen or the egg? How big is the Universe? Have you seen God?" Or, "Why do dogs bark in the night when the earthquake would just be going to strike?" Or, "If electrons are moving around the nucleus, like planets do in the universe?" and, so on... The list of such elusive questions may be numerous, but, if something is happening and observable to the human, then, it follows a law of science, BASED ON facts and figures, which, indirectly makes an intelligent and sound-minded person liable to answer these matters popularised as riddles in our society due to lack of knowledge or clarity. It has been noticed that, those who have raised such questions also failed to come up with a logical and convincing answer to such questions. In turn, to make others speechless, they try to imply similar questions. However, after reading this book, one may find himself in a position to find answers to all such questions or may acquire a concept to think and reach a level of understanding that he may derive the answer to further such evolving questions. Thus, the creation of every object found in this universe has followed a system and an attempt has been made to introduce the readers to such systems. That's why what you think is not important but rather how you think is more important.

particles work. By hypothesizing particles as a single loop of vibrating string, they are on the brink of discovering a way to explain all of nature's forces in a single theory.
