training with vados: D-Day Illustrated Edition Stephen E. Ambrose, 2014-05-06 Now illustrated with an extraordinary collection of over 125 photos, Stephen E. Ambrose's D-Day is the definitive history of World War II's most pivotal battle, June 6, 1944, the day that changed the course of history. D-Day is the epic story of men at the most demanding moment of their lives, when the horrors, complexities, and triumphs of life are laid bare. Distinguished historian Stephen E. Ambrose portrays the faces of courage and heroism, fear and determination—what Eisenhower called “the fury of an aroused democracy”—that shaped the victory of the citizen soldiers whom Hitler had disparaged. Drawing on more than 1,400 interviews with American, British, Canadian, French, and German veterans, Ambrose reveals how the original plans for the invasion had to be abandoned, and how enlisted men and junior officers acted on their own initiative when they realized that nothing was as they were told it would be. The action begins at midnight, June 5/6, when the first British and American airborne troops jumped into France. It ends at midnight, June 6/7. Focusing on those pivotal twenty-four hours, the book moves from the level of Supreme Commander to that of a French child, from General Omar Bradley to an American paratrooper, from Field Marshal Montgomery to a German sergeant. Ambrose's D-Day is the most honored account of one of our history's most important days.

training with vados: Technopols Jorge I. Domínguez, 2010-11-01 In recent years first Chile, then Argentina, Brazil, and Mexico have abandoned decades-old authoritarian political regimes and state-directed economic strategies and moved toward democratized politics and freer markets. This volume seeks to understand the key roles of technopols--technically skilled, politically savvy leaders--in these transformations. It is based in part on elite interviews with each of the leaders discussed: Domingo Cavallo of Argentina, Pedro Aspe of Mexico, Fernando Henrique Cardoso of Brazil, and Evelyn Matthei and Alejandro Foxley of Chile. All are major social scientists turned politicians who, the authors argue here, have themselves contributed to the formulation of the ideas

that they eventually came to implement in their respective governments. Contributors are Jorge I. Domínguez, Javier Corrales, Stephanie R. Cobb, João Resende-Santos, Delia M. Boylan, and Jeanne Kinney Giraldo.

training with vados: Envisioning Reform Linn Hamnergren, 2008-03-17 Judicial reform became an important part of the agenda for development in Latin America early in the 1980s, when countries in the region started the process of democratization. Connections began to be made between judicial performance and market-based growth, and development specialists turned their attention to “second generation” institutional reforms. Although considerable progress has been made already in strengthening the judiciary and its supporting infrastructure (police, prosecutors, public defense counsel, the private bar, law schools, and the like), much remains to be done. Linn Hamnergren’s book aims to turn the spotlight on the problems in the movement toward judicial reform in Latin America over the past two decades and to suggest ways to keep the movement on track toward achieving its multiple, though often conflicting, goals. After Part I’s overview of the reform movement’s history since the 1980s, Part II examines five approaches that have been taken to judicial reform, tracing their intellectual origins, historical and strategic development, the roles of local and international participants, and their relative success in producing positive change. Part III builds on this evaluation of the five partial approaches by offering a synthetic critique aimed at showing how to turn approaches into strategies, how to ensure they are based on experiential knowledge, and how to unite separate lines of action.

training with vados: Integrative Neurology John W. McBurney, Ilene S. Ruhoy, 2020 Dementia, Parkinson's Disease, headache, and neuropathy are all conditions for which narrowly focused medical interventions all too often fall short. The first book in its field, Integrative Neurology synthesizes complementary modalities with state-of-the-art medical treatment to offer a new vision for neurological care. The authors begin by looking inward at the crisis of stress and burnout that confronts all of medicine, but neurology in particular. It goes on to provide a selective yet in-depth review of important topics in neurological practice from the perspective of integrative medicine. Taking an evidence based approach throughout, chapters cover chronic diseases such as Multiple Sclerosis, Dementia, and Parkinson's Disease. The volume also address clinical issues such as headache, traumatic brain injury, navigating the endocannabinoid system and aging, nutrition and stroke, neuropathy, toxins and neurodevelopment, as well as the modalities of Ayurvedic Medicine and acupuncture. Integrative medicine is defined as a healing-oriented medicine that takes account of the whole person (body, mind, and spirit) as well as all aspects of lifestyle. It emphasizes the therapeutic relationship and makes use of appropriate therapies, both conventional and alternative. Series editor Andrew Weil, MD is Professor and Director of the Arizona Center for Integrative Medicine at the University of Arizona. Dr. Weil's program was the first such academic program in the US, and its stated goal is to combine the best ideas and practice of conventional and alternative medicine into cost effective treatments without embracing alternative practices uncritically.

training with vados: French Peasant Fascism Robert O. Paxton, 1997 French Peasant Fascism is the first account of the Greenshirts, a militant right-wing peasant movement in 1930s France that sought to transform the Republic into an authoritarian, agrarian state. Author Robert Paxton examines the Greenshirts in five case studies, throwing new light on French rural society and institutions during the Depression and on the emergence of a new rural leadership of authentic

farmers. Paxton points out that fascism remained weak in the French countryside because the French state protected landowners more effectively than did those of Weimar Germany and Italy, and because French rural notables were so firmly embedded in social and economic power. Although the Greenshirts disappeared with the Third Republic, they left a double legacy: a tradition of peasant direct action, which is still exercised today; and the idea of France as a peasant nation, whose identity and virtues rest upon the persistence of a large peasant sector. That self-image continues to influence French policy choices today, long after the social structure on which it rested has disappeared.
