us government textbook ap: Identified versus Statistical Lives I. Glenn Cohen, Norman Daniels, Nir Eyal, 2015-03-09 The identified lives effect describes the fact that people demonstrate a stronger inclination to assist persons and groups identified as at high risk of great harm than those who will or already suffer similar harm, but endure unidentified. As a result of this effect, we allocate resources reactively rather than proactively, prioritizing treatment over prevention. For example, during the August 2010 gold mine cave-in in Chile, where ten to twenty million dollars was spent by the Chilean government to rescue the 33 miners trapped underground. Rather than address the many, more cost effective mine safety measures that should have been implemented, the Chilean government and international donors concentrated efforts in large-scale missions that concerned only the specific group. Such bias as illustrated through this incident raises practical and ethical questions that extend to almost every aspect of human life and politics. What can social and cognitive sciences teach us about the origin and triggers of the effect? Philosophically and ethically, is the effect a bias to be eliminated or is it morally justified? What implications does the effect have for health care, law, the environment and other practice domains? This volume is the first to take an interdisciplinary approach toward answering this issue of identified versus statistical lives by considering a variety of perspectives from psychology, public health, law, ethics, and public policy.

us government textbook ap: Learning to Survive Mneesha Gellman, 2025-11-18 Traces the experiences of Yurok high school students and educators as they navigate between Native and non-Native spaces Learning to Survive explores how Native American youth are impacted by formal educational experiences, through the insights of students and teachers working to revitalize the Yurok language. Sharing stories of Native American resilience amidst toxic school and community cultures, Mneesha Gellman examines the consequences of the misrepresentation and suppression of Indigenous culture in secondary education. Through personal testimonies and interviews from Northern California high schools, Gellman traces the experiences of students as they navigate their own identities between Native and non-Native spaces, and of educators who relate their efforts in providing their students with not just language instruction, but a sense of support and community that goes beyond the classroom. Students and teachers alike detail how they struggle to thrive under systems of white supremacy while protecting and preserving their identity and culture, particularly through the work of language education and language-keeping. Learning to Survive highlights the profound harm done by perpetuating White supremacy and the importance of investing in culturally sustaining curricula. Youth well-being suffers when students are faced with hostile school environments and when they do not see themselves or their communities truthfully or positively represented in curricula. This book calls on adults—policymakers, teachers, families, and others—to consider what changes we can and should make in our daily work to promote Native American well-being in schools.
