us history learning for youth: *The First U.S. History Textbooks* Barry Joyce, 2015-08-27 This book analyzes the common narrative residing in American History textbooks published in the first half of the 19th century. That story, what the author identifies as the American “creation” or “origins” narrative, is simultaneously examined as both historic and “mythic” in composition. It offers a fresh, multidisciplinary perspective on an enduring aspect of these works. The book begins with a provocative thesis that proposes the importance of the relationship between myth and history in the creation of America’s textbook narrative. It ends with a passionate call for a truly inclusive story of who Americans are and what Americans aspire to become. The book is organized into three related sections. The first section provides the context for the emergence of American History textbooks. It analyzes the structure and utility of these school histories within the context of antebellum American society and educational practices. The second section is the heart of the book. It recounts and scrutinizes the textbook narrative as it tells the story of America’s emergence from “prehistory” through the American Revolution—the origins story of America. This section identifies the recurring themes and images that together constitute what early educators conceived as a unified cultural narrative. Section three examines the sectional bifurcation and eventual re-unification of the American History textbook narrative from the 1850s into the early 20th century. The book concludes by revisiting the relationship between textbooks, the American story, and mythic narratives in light of current debates and controversies over textbooks, American history curriculum and a common American narrative.

us history learning for youth: *The Future of Civic Education* Elizabeth Yeager Washington, Keith C. Barton, 2024-10-01 Speaking to the need to move beyond traditional formulations, this textbook presents radical visions for transforming civic education in the United States. Drawing on the experience of educators and scholars—including those rooted in feminist, queer, abolitionist, global, and race-conscious perspectives—this work offers new, practical ideas for civic education reform. Responding to recent political crises, many scholars, educators, and public commentators have called for a rebirth of civic education, but these all are grounded in the premise that the goal of civic education should be to teach students about the U.S. Constitutional system and how to operate within it. This book argues that the U.S. governmental system, including the Constitution, is infused with racist and anti-democratic premises and procedures. It asks: How can we seek a new path—one that is more democratic, more equitable, and more humane? A diverse range of leading civic educators, who are willing not just to push the boundaries of civic education but to operate outside its assumptions altogether, explore what future possibilities for civic education might look like and how these innovative ideas could be implemented in the classroom. Combining theory with practice, *The Future of Civic Education* will be important reading for those studying or researching in social studies methods, social studies issues, citizenship, and civic education. It will also be beneficial to social studies teachers at elementary and secondary levels, as well as policymakers and non-governmental organizations (NGOs).

us history learning for youth: Teachers and the Epistemology of History Henrik Åström Elmersjö, Paul Zanazanian, 2024-06-25 This edited book explores conceptual as well as empirical approaches to epistemic beliefs that teachers of history might hold. In many parts of the world, history teachers are tasked with both upholding historical national myths and at the same time giving students the tools needed to deconstruct history and think critically. This ambiguity embedded in the combination of reconstruction and deconstruction is a difficult landscape for teachers to navigate. The chapters of this book therefore explore how teachers reason regarding the epistemic nature of history and how this impacts their teaching, interpretation of curricula and relationship to their students. Contributions consider the implications for prospective history teachers and in-service training, challenges to the field and point to ways forward. The book will be of interest to academics and students of history education, as well as practising teachers and museum curators. This is an open access book.
