black mesa walkthrough: *Freedom's Tree* Kenneth Lippincott, 2014-12-12 Have you ever desired to escape and live simply? Have you ever fantasized about moving to a small town? Having spent half of my forty-three year career as a high school principal and volunteer pastor in small towns and counties with less than five thousand people, I learned that bliss was superficial. No matter how positive, people resisted change, especially with a newcomer serving as the agent of change. Kinfolk mattered more than issues. To survive, newcomers walked a fine line and had to learn who controlled and who was related to whom. Relationships mattered more than issues. Good versus evil became obvious. In Freedom's Tree, Rock Creek Valley resembled Canaanite cities with

heavily fortified bulwarks. Interstate highway construction had decimated the economy and school reorganization altered valley culture. Perceived as invaders, newcomers arrived in Rock Creek at God's direction, while a murderer escaped detection and residents presumed another's guilt.

black mesa walkthrough: Information Foraging Theory Peter Pirolli, 2009 Although much of the hubris and hyperbole surrounding the 1990's Internet has softened to a reasonable level, the inexorable momentum of information growth continues unabated. This wealth of information provides resources for adapting to the problems posed by our increasingly complex world, but the simple availability of more information does not guarantee its successful transformation into valuable knowledge that shapes, guides, and improves our activity. When faced with something like the analysis of sense-making behavior on the web, traditional research models tell us a lot about learning and performance with browser operations, but very little about how people will actively navigate and search through information structures, what information they will choose to consume, and what conceptual models they will induce about the landscape of cyberspace. Thus, it is fortunate that a new field of research, Adaptive Information Interaction (AII), is becoming possible. AII centers on the problems of understanding and improving human-information interaction. It is about how people will best shape themselves to their information environments, and how information environments can best be shaped to people. Its roots lie in human-computer interaction (HCI), information retrieval, and the behavioral and social sciences. This book is about Information Foraging Theory (IFT), a new theory in Adaptive Information Interaction that is one example of a recent flourish of theories in adaptationist psychology that draw upon evolutionary-ecological theory in biology. IFT assumes that people (indeed, all organisms) are ecologically rational, and that human information-seeking mechanisms and strategies adapt the structure of the information environments in which they operate. Its main aim is to create technology that is better shaped to users. Information Foraging Theory will be of interest to student and professional researchers in HCI and cognitive psychology.
