**pode walkthrough: Contabilidade contemporânea aplicada** Ana Carolina Vasconcelos Colares, 2021-08-12 Quando se fala em mundo contemporâneo, estamos tratando sobre o atual contexto em que vivemos, e na área contábil isso implica em uma série de mudanças ocorridas nos últimos anos e que impactaram essa área do conhecimento ampliando o mercado e possibilitando atuação mais estratégica dos profissionais que nela atuam. Traçando uma linha do tempo nesse contexto, temos três marcos importantes a destacar. Primeiramente, o surgimento do Sistema Público de Escrituração Digital (Sped) e a Nota Fiscal Eletrônica no final da década dos anos 2000, quando houve uma substituição gradual do papel pelo meio eletrônico como suporte das informações que garantem o cumprimento das obrigações acessórias. Essa revolução digital possibilitou que o trabalho de fiscalização se tornasse mais preciso e rápido, enquanto que os empresários poderiam se dedicar mais ao negócio, sem perder tempo com burocracia e com a utilização de arquivamentos em papel. No segundo momento, no início da década dos anos 2010, houve o processo de convergência das normas contábeis ao padrão internacional, o que possibilitou o aumento da comparabilidade e fidedignidade das informações contábeis, tornando a contabilidade uma referência fundamental na globalização dos mercados. As premissas adotadas no novo arcabouço normativo contábil se tornaram mais subjetivas e sujeitas à julgamento por parte de quem reporta as informações, mas, por outro lado, essa subjetividade possibilitou que a visão contábil se tornasse mais próxima da realidade econômica das entidades que reportam a informação. Deste modo, além de aumentar a comparabilidade a nível internacional, a contabilidade se tornou uma fonte de informações cada vez mais relevante e capaz de influenciar as decisões de investimentos dos diversos stakeholders. Por fim, caminhando para a década dos anos 2020, o conceito de Big Data se tornou mais conhecido e ganhou espaço na contabilidade. Big Data é o nome dado para o grande volume de dados que são difíceis de processar usando as técnicas tradicionais de banco de dados e software. No entanto, com o tratamento adequado, esses dados são usados para revelar padrões e tendências de mercado transformando a maneira como as decisões de negócios são tomadas. Desta forma, por terem uma origem na contabilidade, os dados são usados por contadores para fornecer relatórios financeiros, avaliar e gerenciar riscos, medir o desempenho e gerar inteligência empresarial, também conhecida por Business Intelligence. Com a chegada da Pandemia do Covid-19 em 2020, percebemos que não houve impacto significativo para a contabilidade e toda a adaptação para o home office ocorreu de forma tranquila e natural. Os maiores desafios encontrados foram o volume de trabalho adicional em razão do aumento de orientações, ocasionado pela grande quantidade de novas legislações e

decretos durante o período de pandemia, e, a continuidade dos negócios dos clientes dos escritórios de contabilidade por causa das restrições impostas pelo isolamento social. Diante do contexto apresentado, percebe-se que é de extrema relevância a inserção de questões que englobam aspectos contemporâneos na contabilidade, entendendo ainda que a contabilidade aplicada envolve a visão empírica de sua atuação em diferentes tipos de entidades e setores econômicos. Desta forma, essa coletânea de artigos aborda estudos diversos relacionados com a contabilidade digital, auditoria, disclosure contábil, mercado de trabalho da contabilidade, reflexos econômico-financeiros da pandemia e outros temas relevantes. Pretende-se com esta publicação fomentar a reflexão sobre os novos rumos da contabilidade, bem como as diferentes metodologias de pesquisa aplicáveis, para que novos estudos sejam desenvolvidos contribuindo para o entendimento da relevância da contabilidade para o mercado e a economia global. Desejo a você uma ótima leitura!

**pode walkthrough: The American Reader** Paulo Sergio Santos Negrete, 2021-07-18 Welcome to Suggestopedia and the New developments of Neuroscience This wonderful method, which has its origins in the science of Suggestology, accelerates the learning process up to 10 times more than any conventional method. It has several positive by-products, such as psychotherapeutic and psychohygienic effects in the Suggestopedic environment created in the classroom. During my years of teaching English as a foreign Language, I could never accept the fact that my students needed so many years to start speaking a new language with confidence. Some others, even with years of study and dedication could not develop, despite my efforts to create better classes and activities. Others had constantly to review the verb to be . The results? The students were afraid of speaking and learning. Many people may ask: But how can it be possible to learn effectively in a short time? What s the secret? Others say: That s impossible! It is just propaganda! But actually, we are beings with an incredible power to learn, but the Social Suggestive Norms so present in our pedagogical system for centuries dictates how much we can learn and how long we need to. But I ask you: How did we learn our mother language? How could our brain collect, organize, understand and reproduce words and sentences when we were children? No one went to school to learn to speak. Our parents or who may have raised us never taught us grammar in order to make us speak. We can realize that we are missing something in our system of foreign language teaching. It does not use the resources available in our brain/mind. Our way of teaching in the present is not structured to follow the way the brain receives stores and processes information. So, why not to change the whole system? The answer is quite simple. Who wants to train teachers? Change textbooks and methods? How long would it take? But the fact is that more scientists are discovering what Dr. Lozanov did decades ago when he didn t have the technology we have today. Our researchers have noticed that our system is not the best approach to learn. That s why so many so-called accelerated learning systems or brain-friendly approaches have appeared. The main problem is that most of them have never been really tested. They have not had a follow up for decades to check if they would not harm the students. Suggestopedia is the ONLY method that had a scientific and medical background. Before publishing his results Dr. Lozanov accompanied his students for 10 years to be sure that nobody would have any negative by-product. On the contrary, his students became healthier and more intelligent. Prof. Paulo Negrete Academic Director Certified in Desuggestive Pedagogy
