walkthrough where it all began: *Working Through Synthetic Worlds* Kenneth W. Kisiel, 2018-04-17 Virtual environments (VE) are human-computer interfaces in which the computer creates a sensory-immersing environment that interactively responds to and is controlled by the behaviour of the user. Since these technologies will continue to become more reliable, more resolute and more affordable, it's important to consider the advantages that VEs may offer to support business processes. The term 'synthetic world' refers to a subset of VEs, having a large virtual landscape and a set of rules that govern the interactions among participants. Currently, the primary motivators for participation in these synthetic worlds appear to be fun and novelty. As the novelty wears off, synthetic worlds will need to demonstrate a favourable value proposition if they are to survive. In particular, non-game-oriented worlds will need to facilitate business processes to a degree that exceeds their substantial costs for development and maintenance. *Working Through Synthetic Worlds* explores a variety of different tasks that might benefit by being performed within a synthetic world. The editors use a distinctive format for the book, consisting of a set of chapters composed of three parts: ¢ a story or vignette that describes work conducted within a synthetic world based loosely on the question, 'what will work be like in the year 2025?', founded on the expert authors' expectations of plausible future technologies ¢ a scholarly review of the technologies described by the stories and the current theories related to those technologies ¢ a prescription for future research required to bridge the current state-of-the-art with the notional worlds described in the stories. The book will appeal to undergraduate and graduate students, professors, scientists and engineers, managers in high-tech industries and software developers.

walkthrough where it all began: *Learning Conversations in Museums* Gaea Leinhardt, Kevin Crowley, Karen Knutson, 2003-01-30 What do people learn from visiting museums and how do they learn it? The editors approach this question by focusing on conversations as both the process and the outcome of museum learning. People do not come to museums to talk, but they often do talk. This talk can drift from discussions of managing the visit, to remembrances of family members and friends not present, to close analyses of particular objects or displays. This volume explores how these conversations reflect and change a visitor's identity, discipline-specific knowledge, and engagement with an informal learning environment that has been purposefully constructed by an almost invisible community of designers, planners, and educators. Fitting nicely into a small but rapidly expanding market, this book presents: *one of the first theoretically grounded set of studies on museum learning; *an explicit presentation of innovative and rich methodologies on learning in museums; *information on a variety of museums and subject matter; *a study on exhibitions, ranging from art to science content; *authors from the museum and the academic world; *a range of methods--from the analysis of diaries written to record museum visits, to studies of preservice teachers using pre- and post-museum visit tests; *an examination of visitors ranging from age 4-75 years of age, and from known and unknown sample populations; and *a lens that examines museum visits in a fine grained (1 second) or big picture (week, year long) way.
