ge appliance manuals: *"All-Electric" Narratives* Rachele Dini, 2021-10-07 Winner of the 2023 Emily Toth Award for Best Single Work in Women's Studies *"All-Electric" Narratives* is the first in-depth study of time-saving electrical appliances in American literature. It examines the literary depiction of refrigerators, vacuum cleaners, oven ranges, washing machines, dryers, dishwashers, toasters, blenders, standing and hand-held mixers, and microwave ovens between 1945, when the "all-electric" home came to be associated with the nation's hard-won victory, and 2020, as contemporary writers consider the enduring material and spiritual effects of these objects in the 21st century. The appropriation and subversion of the rhetoric of domestic electrification and time-saving comprises a crucial, but overlooked, element in 20th-century literary forms and genres including Beat literature, Black American literature, second-wave feminist fiction, science fiction, and postmodernist fiction. Through close-readings of dozens of literary texts alongside print and television ads from this period, Dini shows how U.S. writers have unearthed the paradoxes inherent to claims of appliances' capacity to "give back" time to their user, transport them into a technologically-progressive future, or "return" them to some pastoral past. In so doing, she reveals literary appliances' role in raising questions about gender norms and sexuality, racial exclusion and erasure, class anxieties, the ramifications of mechanization, the perils and possibilities of conformity, the limitations of patriotism, and the inevitable fallacy of utopian thinking-while both shaping and radically disrupting the literary forms in which they operated.

ge appliance manuals: The President Electric Timothy Raphael, 2011-03-15 In this illuminating, multi-pronged cultural and performance history of such phenomena as Chautauqua and radio, movies, and electrical technology, Timothy Raphael puts together a compelling and sometimes revelatory narrative of how commandingly Reagan mastered the matrix of performance, technology, media, celebrity, and the 'republic of consumption' he came of age in. ---Dana Nelson, Vanderbilt University Garry Wills and others have written well on the phenomenon of Ronald Reagan, the actor-president, but this is the first book by a real authority---trained in performance and fully reflective about it from the inside . . . unquestionably an important contribution to the disciplinary fields of American studies and performance studies, and an important contribution to public affairs. ---Joseph Roach, Yale University When Ronald Reagan first entered politics in 1965, his public profile as a performer in radio, film, television, and advertising and his experience in public relations proved invaluable political assets. By the time he left office in 1989, the media in which he trained had become the primary source for generating and wielding political power. The President Electric: Ronald Reagan and the Politics of Performance reveals how the systematic employment of the techniques and technologies of mass-media performance contributed to Reagan's rise to power and defined his style of governance. The President Electric stands out among books on Reagan as the first to bring the rich insights of the field of performance studies to an understanding of the Reagan phenomenon, connecting Reagan's training in electronic media to the nineteenth-century notion of the fiat of electricity---the emerging sociopolitical power of three entities (mechanical science, corporate capitalism, and mass culture) that electric technology made possible. The book describes how this new regime of cultural and political representation shaped the development of the electronic mass media that transformed American culture and politics and educated Ronald Reagan for his future role as president.
