**sandweiss test prep: Handbook of South American Archaeology** Helaine Silverman, William Isbell, 2008-04-06 Perhaps the contributions of South American archaeology to the larger field of world archaeology have been inadequately recognized. If so, this is probably because there have been relatively few archaeologists working in South America outside of Peru and recent advances in knowledge in other parts of the continent are only beginning to enter larger archaeological discourse. Many ideas of and about South American archaeology held by scholars from outside the area are going to change irrevocably with the appearance of the present volume. Not only does the Handbook of South American Archaeology (HSAA) provide immense and broad information about ancient South America, the volume also showcases the contributions made by South Americans to social theory. Moreover, one of the merits of this volume is that about half the authors (30) are South Americans, and the bibliographies in their chapters will be especially useful guides to Spanish and Portuguese literature as well as to the latest research. It is inevitable that the HSAA will be compared with the multi-volume Handbook of South American Indians (HSAI), with its detailed descriptions of indigenous peoples of South America, that was organized and edited by Julian Steward. Although there are heroic archaeological essays in the HSAI, by the likes of Junius Bird, Gordon Willey, John Rowe, and John Murra, Steward states frankly in his introduction to Volume Two that "arch- ology is included by way of background" to the ethnographic chapters.

**sandweiss test prep: Phytolith and Starch Research in the Australian-Pacific-Asian Regions** Diane M. Hart, 2003 This series reports the results of archaeological and related research within South-East Asia, but particularly in Australia, Papua New Guinea and island Melanesia. This issue brings together many of the papers and posters presented at a conference on phytolith and starch research in the region held at The Australian National University in Canberra in August 2001. The conference attracted participants from within Australia as well as from New Zealand, China, Belgium, the United States and Argentina. Subjects include a history of phytolith researchers in Australia, techniques for the use and analysis of phytolith and starch research, taphonomy and phytolith applications. The modern era of Australian phytolith research began in the 1980s and, with increasing numbers of universities adding elements of phytolith studies for students, and the high quality of research being conducted now, phytolith research in Australia can be considered to have come of age. Such progress in the realms of archaeology, palaeoenvironmental studies and pedology is reflected in this collection.
