snhu textbooks: *Pursuing Quality, Access, and Affordability* Stephen C. Ehrmann, 2023-07-03 Whether they recognize it or not, virtually all colleges and universities face three Grand Challenges: ·Improve the learning outcomes of a higher education: A large majority of college graduates are weak in capabilities that faculty and employers both see as crucial. ·Extend more equitable access to degrees: Too often, students from underserved groups and poor households either don't enter college or else drop out without a degree. The latter group may be worse off economically than if they'd never attempted college. ·Make academic programs more affordable (in money and time) for students and other important stakeholder groups: Many potential students believe they lack the money or time needed for academic success. Many faculty believe they don't have time to make their courses and degree programs more effective. Many institutions believe they can't afford to improve outcomes. These challenges are global. But, in a higher education system such as that in the United States, the primary response must be institutional. This book analyzes how, over the years, six pioneering colleges and universities have begun to make visible, cumulative progress on all three fronts.

snhu textbooks: *Broken* Paul LeBlanc, 2022-09-27 Many of the systems built to serve people instead do more harm than good. In *Broken*, Dr. Paul LeBlanc, president of Southern New Hampshire University, draws on his experience working in one such system—education—to reconnect us to the human facets of serving people. In doing so, he charts a course for rebuilding and reinhabiting better systems across education, healthcare, criminal justice, government, and more. The United States spends enormous sums on helping people—\$3.8 trillion on healthcare, \$182 billion on prisons, and \$604 billion on higher education—and yet these systems routinely fail us. When we seek to improve how they function, our efforts focus on policy debates, technical solutions, funding, and data. But if these systems are to truly improve, we have to start with the human values that fuel decision making. *Broken* explores the deeply human dimensions we must consider—aspiring, discovering, mattering—if we want to rebuild the policies, technologies, processes, and, most importantly, the heart we use to serve people. Over the course of 25 years as a college and university president and higher education innovator, Paul LeBlanc, PhD, has encountered innumerable wonderful people who want to do the right thing for students but whose efforts cannot overcome the shortcomings of the system. Now, he shares what he's learned, and continues to learn, about the opportunities and necessity to put humanity and care at the center of all our systems. With *Broken*, LeBlanc outlines the distinctly human questions that education—and all systems that serve—must start asking to reframe what is broken in order to make lasting repairs and to better care for those they serve.

snhu textbooks: *Inclusive Access and Open Educational Resources E-text Programs in Higher Education* Tracy A. Hurley, 2020-06-12 This volume takes a comprehensive and broad look at e-text programs across a wide spectrum of programs, institutions, and policies in three parts. The first part

showcases several policy papers to contextualize the discussion and highlight the reasons for IAE programs' structure and the obstacles they face for implementation. The second part is an in-depth exploration of various case studies that provide a detailed description of IAE programs, including information about program elements, program structure, program size, and insights into how programs are operationalized, and their shortcomings and benefits to students and stakeholders. The final part is a selection of research papers that offer evidence-based support for the adoption of IAE programs in terms of student success, access, engagement, costs, and a variety of other student and institutional outcomes. There are approximately 300 institutions of higher education that currently have some form of Inclusive Access or Open Educational Resources E-text (IAE) program in the United States, but there is little scholarship that engages on the topic of assessing these programs' effect on student success. The results of the research studies included in this volume will inform faculty, administrators, and policy-makers who seek to support the development, adoption, and implementation of IAE programs based on their potential positive effects on student success and other outcomes.

snhu textbooks: Health and Well-Being in the Middle Grades Katherine Main, Susan Whatman, 2023-02-01 Current research around the middle grades has brought a heightened attention by teachers, policymakers, and researchers recognizing that this stage is a time when a students' health and social and emotional well-being directly impacts their academic progress. The purpose of this research - based volume is to fill that gap and to enable school leaders, teachers, academics, and teacher candidates to develop successfully an understanding of the health and well-being aspects of young adolescent learners and provide them with the necessary tools and information to address the health and well-being needs of young adolescent learners.

snhu textbooks: Essential Computational Thinking Ricky J. Sethi, 2020-06-17 Essential Computational Thinking: Computer Science from Scratch helps students build a theoretical and practical foundation for learning computer science. Rooted in fundamental science, this text defines elementary ideas including data and information, quantifies these ideas mathematically, and, through key concepts in physics and computation, demonstrates the relationship between computer science and the universe itself. In Part I, students explore the theoretical underpinnings of computer science in a wide-ranging manner. Readers receive a robust overview of essential computational theories and programming ideas, as well as topics that examine the mathematical and physical foundations of computer science. Part 2 presents the basics of computation and underscores programming as an invaluable tool in the discipline. Students can apply their newfound knowledge and begin writing substantial programs immediately. Finally, Part 3 explores more sophisticated computational ideas, including object-oriented programming, databases, data science, and some of the underlying principles of machine learning. Essential Computational Thinking is an ideal text for a firmly technical CS0 course in computer science. It is also a valuable resource for highly-motivated non-computer science majors at the undergraduate or graduate level who are interested in learning more about the discipline for either professional or personal development.
