Descriptive psychopathology is a field that forms the foundation of clinical practice and research in clinical psychology, psychiatry, psychiatric social work, psychiatric nursing, and

allied professions in mental health. Since the 1st edition, the editors have devised and updated a handbook to cover both general and specific topics in psychopathology that would be useful to researchers, practitioners, and graduate or other advanced students in the mental health and behavioral medicine professions. To implement this plan, we have very carefully chosen colleagues whom we respect for their expertise in particular fields. These authors include both clinicians and researchers who have outstanding national reputations, as well as more junior behavioral scientists and clinicians who, in our opinion, will achieve similar recognition in the future. The excellent chapters in this book lead us to believe that we have chosen wisely. We would like to express our appreciation to these authors for their outstanding contributions and cooperation.

By crossing different domains, this book offers a fresh perspective on the human mind based on the dialogue between philosophy, cognitive science and clinical psychology. Mental disorders discussed include schizophrenia, anxiety disorders, major

depression, obsessive-compulsive disorder, post-traumatic stress disorder and paranoia. This book caters to the increasing interest in interdisciplinary approach to solving some of the problems in psychopathology.
