best biochemistry textbooks: *Evidences for God and His Creations: Nature, the Flood, and the Bible* Dr. T. J. Tofflemire, 2011-07-21 This book provides summary apologetics from about 200 references. It is unique in that many authors with differing viewpoints are put together in brief key point summaries. Some of the books covered are 1100 pages long. The original authors views are briefly integrated and compared. The different views of creation are also discussed and compared and given a open minded weighing. Are you concerned about the fact that 70% of our youth no longer attend church and do not have a biblical world view? The naturalistic or humanistic world view they adopt from schooling favors the following: 1. Man evolved from primates and is a biological machine with no purpose. 2. There is no source of true morals and thus morals are relative and determined by whatever a given group decides or whatever is most popular. 3. Since man is only

and animal, there is no basis for individual human rights, only rights for the masses. There are some good arguments provided in the book to counter all of this and provide a biblical world view. These arguments are brief and easy to share in witnessing situations.

best biochemistry textbooks: Good Calories, Bad Calories Gary Taubes, 2007-09-25 This groundbreaking book by award-winning science writer and bestselling author of *Why We Get Fat* and *The Case for Keto* shows us that almost everything we believe about the nature of a healthy diet is wrong. For decades we have been taught that fat is bad for us, carbohydrates better, and that the key to a healthy weight is eating less and exercising more. Yet despite this advice, we have seen unprecedented epidemics of obesity and diabetes. Taubes argues that the problem lies in refined

carbohydrates, like white flour, easily digested starches, and sugars, and that the key to good health is the kind of calories we take in, not the number. Called "a very important book," by Andrew Weil and "destined to change the way we think about food," by Michael Pollan, this groundbreaking book by award-winning science writer Gary Taubes shows us that almost everything we believe about the nature of a healthy diet is wrong.
