**7th grade textbooks: How Finns Learn Mathematics and Science** , 2007-01-01 The Finnish students' success in the first PISA 2000 evaluation was a surprise to most of the Finns, and even people working in teacher education and educational administration had difficulties to believe that this situation would continue. Finland's second success in the next PISA 2003 comparison has been very pleasing for teachers and teacher educators, and for education policymakers. The good results on the second time waked us to think seriously on possible reasons for the success. Several international journalists and expert delegations from different countries have asked these reasons while visiting in Finland. Since we had no commonly acceptable explanation to students' success, we decided at the University of Helsinki to put together a book "How Finns Learn Mathematics and Science?", in order to give a commonly acceptable explanation to our students' success in the international PISA evaluations. The book tries to explain the Finnish teacher education and school system as well as Finnish children's learning environment at the level of the comprehensive school, and thus give explanations for the Finnish PISA success. The book is a joint enterprise of Finnish teacher educators. The explanations for success given by altogether 40 authors can be classified into three groups: Teacher and teacher education, school and curriculum, and other factors, like the use of ICT and a developmental project LUMA. The main result is that there is not one clear explanation, although research-based teacher education seems to have some influence. But the true explanation may be a combination of several factors.

**7th grade textbooks: Textbooks as Propaganda** Joanna Wojdon, 2017-09-07 Textbooks as Propaganda analyses post-Second World War Polish school textbooks to show that Communist indoctrination started right from the first grade. This indoctrination intensified as students grew older, but its general themes and major ideas were consistent regardless of the age of the readers and the discipline covered. These textbooks promoted the new, post-war Poland's boundaries, its alliance and friendship with the Soviet Union, and communist ideology and its implementation within the countries of the Soviet bloc. Through a thorough analysis of nearly a thousand archival textbooks, Joanna Wojdon explores the ways in which propaganda was incorporated into each school subject, including mathematics, science, physics, chemistry, biology, geography, history, Polish language instruction, foreign language instruction, art education, music, civic education, defense training, physical education and practical technical training. Wojdon also traces the extent of the propaganda, examining its rise and eventual decrease in textbooks as the totalitarian state began its decline. Positioning school textbooks and textbook propaganda in the broader context of a changing political system, posing questions about the effectiveness of the regime's educational policies and discussing recent research into political influences on school education, this book will appeal to anyone interested in the history of communist-era propaganda.
