johns hopkins textbooks: The Johns Hopkins University School of Medicine Curriculum for the Twenty-first Century Catherine D. De Angelis, 2000-03-27 Our basic philosophy of medical

education must be directed not toward creating a neurosurgeon, a family practitioner, a cardiologist, or a general pediatrician but toward creating an undifferentiated 'stem cell' physician who is so well prepared that he or she is fully capable of taking any career path after medical school. Every indication is that our goal is being met. The new curriculum is preparing students for the demands and responsibilities of a new era of medicine, science, and medical arts. -- from the Foreword, by Michael M. E. Johns, M.D. The curriculum taught in many U.S. medical schools today has been altered little since 1910. Now, spurred in part by the recent sweeping changes in health care delivery, medical schools are re-evaluating their curricula. The goal is to develop a program of medical education that not only reflects the latest scientific advances but also prepares physicians in the fields and specialties society now needs. This book provides an extensive description of the process and outcome of developing a completely new curriculum at the Johns Hopkins University School of Medicine. The book is organized around the subjects and courses taught: basic sciences, physician and society, medical informatics, and clinical medicine. Chapters also consider evaluation and reform of the curriculum. The contributors, Johns Hopkins faculty members who participated in developing the components of the curriculum, discuss differences between the old and new courses and programs, reasons for the changes, and the process used to plan and implement them. Throughout, the material is presented in a way that permits easy generalization and adaptation to other medical schools. Contributors: Catherine D. De Angelis, M.D. Diane M. Becker, Sc.D. Gert H. johns hopkins textbooks: The Textbook and the Lecture Norm Friesen, 2017-12-15 Why do the basic technologies of education—the book and the lecture—endure in our digital age? Why are the fundamentals of education apparently so little changed in our era of digital technology? Is their

obstinate persistence evidence of resilience or obsolescence? Such questions can best be answered not by imagining an uncertain high-tech future, but by examining a well-documented past—a history of instruction and media that extends from Gilgamesh to Google. Norm Friesen looks to the combination and reconfiguration of oral, textual, and more recent media forms to understand the longevity of so many educational arrangements and practices. Friesen examines the interrelationship of reading, writing, and pedagogy in the case of the lecture and the textbook—from their premodern to their postmodern incarnations. Over hundreds of years, these two forms have integrated textual, oral, and (more recently) digital media and connected them with changing pedagogical and cultural priorities. *The Textbook and the Lecture* opens new possibilities for understanding not only mediated pedagogical practices and their reform but also gradual changes in our conceptions of the knowing subject and of knowledge itself. Drawing on wide-ranging scholarship in fields as diverse as media ecology and German-language media studies, Foucauldian historiography, and even archaeological research, *The Textbook and the Lecture* is a fascinating investigation of educational media.
