pearson textbooks online login: Whitewashing War Christopher Leahey, 2015-04-24
Whitewashing War explores perhaps the most critical issue social studies educators presently face: How do we teach our students about war? In this timely book, Christopher Leahey investigates how the political struggles over the social studies curriculum, the corporate domination of the textbook

and testing industry, and the curricular constraints of the No Child Left Behind Act combine to stifle historical inquiry and deprive students of meaningful social studies instruction. Using the controversial Vietnam War as a case study, Leahey holds textbook narratives up to the light, illuminating how the adoption process, interpretive framework, and selection of evidence combine to transform the past into thinly veiled historical myths. By attending to questions traditionally ignored in history education, this dynamic book: Challenges educators to rethink their pedagogical approaches to military conflict, American and otherwise. Calls on teachers to develop students' critical sensibilities to ask questions, conduct research, evaluate evidence, and make meaning of the past. Provides classroom lessons for history educators and students to engage in rich, intellectual encounters with the historical record. Christopher R. Leahey teaches world history in upstate New York. His articles have appeared in *Social Education* and *The Social Studies*. "If students are to be prepared for the challenges of the 21st century, then we need to provide inspired, interdisciplinary instruction that can provide the skills, values and knowledge to enable our future citizens with the possibility, promise, and perspective to transform their world. Whitewashing War provides that solid interdisciplinary framework for teachers and students to teach and learn about the myth of war." —Critical Education "Leahey echoes a concern expressed by others that history textbooks fail to address the realities of war." —CHOICE "The crowning achievement of Whitewashing War is that it clearly illustrates the necessity of pursuing rational answers about why things are as they are (or were as they were). It becomes clear upon reading this book that, if we help our students pursue rational answers in the course of creating personally meaningful understandings of the world, they will figure out just what it is that needs to be done." —From the Foreword by E. Wayne Ross, University of British Columbia "The author has done a masterful job of exploring issues of historiography, pedagogy, textbook debates, and critical thinking. Through a deep examination of two historical turning points in the Vietnam War, he has contrasted the known facts of these periods with the accounts contained in the textbooks." —Rick Ayers, Graduate School of Education, UC Berkeley "A passionate and powerful analysis. Christopher Leahey provides penetrating insight into how Americans teach about their wars. As such, his book is an invaluable aid to understanding the past and its connection to our current predicament." —Fredrik Logevall, Cornell University "Whitewashing War challenges the fundamental assumptions underlying the corporate regime of standards, textbooks, and testing and exposes the distortions, manipulation, and lies that result. Leahey builds a compelling case for critical inquiry and dialogue. Highly recommended!" —Ronald W. Evans, San Diego State University, author of *The Social Studies Wars*

pearson textbooks online login: Collecting the Past Toby Burrows, Cynthia Johnston, 2018-10-03 Today's libraries and museums are heavily indebted to the passions and obsessions of numerous individual collectors who devoted their lives to amassing collections of books, manuscripts, artworks, and other culturally significant objects. Collecting the Past brings together the latest research on a wide range of significant British collectors from the eighteenth to the twentieth centuries, including Hans Sloane, Sarah Sophia Banks, Thomas Phillipps, Sydney Cockerell, J. P. Morgan Jr., Alfred Chester Beatty and R. E. Hart. Contributors to the volume examine the phenomenon of collecting in a variety of settings and across a range of different materials. Considering the aims and motives that led these collectors to assemble such remarkable collections, the book also examines the history of these collections after the collector's death. Particular attention is given to the often complicated relationship between collectors and the public institutions that subsequently came to house their collections. Situated within the framework of cultural collecting more generally, this book offers an authoritative series of essays on key collectors. Collecting the Past should be most interesting to researchers, academics and postgraduate students engaged in the study of museum studies, book history, manuscript studies, museum history, library history and the history of collecting. Professionals in libraries, museums and galleries will also find the volume of great interest.

pearson textbooks online login: Global Experience Industries Jens Christensen, 2009-08-30 The experience economy is a fourth economic field different from commodities, goods and services. Experiences are an economic value added to a product or identical with the product. When you buy an experience, you pay to spend time enjoying a series of memorable events that a company stages to engage the customer in a personal way. The experience dimension has moved into a predominant place since the 1990s, fueled by an expanding global and digital economy. In developed countries, people get richer and more individualized and having met all basic material needs, they focus increasingly on personal development and self realization. Demand for experience-based products increases, such as tourism and sports as well as film, music and other contents of media and interactive technologies. Furthermore, the demand for experience values is extended to include any product and dimension of modern societies, such as the design of houses, furniture, clothes, cars, computers, etc. This is not a completely new story. Commercial entertainment and design has been around for a century or so. And in addition, universal values of love, sex, belief, family and the meaning of life have always been vital to human beings. What is new is the fact that capitalism is invading more and more fields of experiences connected with emotions and the extension of life proportions. In all developed countries and increasingly on a global scale, a series of expanding industries have emerged to supply the market with experience-oriented goods. In this book, the business development of markets and industries is covered from tourism, to media and entertainment, and from design to sex, including leading companies and trends in all industries involved.

pearson textbooks online login: The Great American Education-industrial Complex

Anthony G. Picciano, Joel H. Spring, 2013 The Great American Education-Industrial Complex examines the structure and nature of national networks and enterprises that seek to influence public education policy in accord with their own goals and objectives. In the past twenty years, significant changes have taken place in the way various interest groups seek to influence policies and practices in public education in the United States. No longer left to the experience and knowledge of educators, American education has become as much the domain of private organizations, corporate entities, and political agents who see it as a market for their ideas, technologies, and ultimately profits. Picciano and Spring posit that educational technology is the vehicle whereby these separate movements, organizations, and individuals have become integrated in a powerful common entity, and detail how the educational-industrial complex has grown and strengthened its position of influence. This timely, carefully documented, well argued book brings together Picciano's perspective and expertise in the field of technology and policy issues and Spring's in the history and politics of education in a unique critical analysis of the education-industrial complex and its implications for the future.

Wayne Perry, 2011-07-11 While distance education is solidly entrenched in the American educational scene, clinical training using distance learning technology is not yet so clearly accepted. A review of the literature found very few studies of the use of Internet technology for clinical training. This study used semi-structured interviews combined with Giorgi's method of phenomenological analysis of experiences of students and site supervisors involved in the Amridge University clinical training program. The purpose of the study was to examine the process by which master's degree students are able to construct their professional identity in a virtual environment. Both supervisors and students reported phenomenological evidence that professional identity can in fact be constructed through group interactions based in an Internet class experience.

pearson textbooks online login: Resurgent Julian Birkinshaw, John Fallon, 2025-07-17 A practical handbook examining how established businesses can use their unique advantages to fight back and win in a digital arena too often dominated by tech start-ups, disruptors and unicorns. The big tech companies (Alphabet, Amazon, Apple, Meta, Microsoft) have had an enormous impact on our everyday lives. A new wave of start-ups in the tech sector has dominated the press and

swallowed up huge amounts of investment. But what about those established companies in the traditional parts of the world's economies, from energy, industrial and consumer goods to travel and health? They rarely got a mention. Everyone was talking about the disrupters – the start-ups and the entrepreneurs – and not about the incumbents. This book is a call for a reality check. For at the core of our established companies are capabilities and qualities that remain highly relevant in the digital age. They are often market leaders for very good reasons – they know their customers and markets well, and they have great product, sales and marketing expertise. They are operationally savvy and financially strong, with deep insights into areas of expertise that no one else has, giving them a unique advantage. John Fallon and Julian Birkinshaw have come to a clear conclusion: incumbents are not going quietly into that dark night. Organizations will need to jettison their analogue baggage and infrastructure and embrace digital transformation. They will survive and they will prosper. And this shows how they are doing it.

Goodson, 2017-11-08 Bring pedagogy and cognitive science to online learning environments *Online Teaching at Its Best: A Merger of Instructional Design with Teaching and Learning Research* is the scholarly resource for online learning that faculty, instructional designers, and administrators have long been awaiting. Over 70 percent of degree-granting institutions offer online classes, and while technical resources abound, the courses often fall short of integrating the best practices in online pedagogy, even if they comply with online course design standards. Typically these standards omit the best practices in teaching and learning and the principles from cognitive science, leaving students struggling to keep the pace, understand the material, and fulfill their true potential as learners. This book fills the gap, providing evidence-based practices for online teaching, online course design, and online student motivation integrated with pedagogical and cognitive science to help you build the distance learning courses and programs your students deserve. As more and more students opt for distance learning, it's up to designers and instructors to rethink traditional methods and learn to work more effectively within the online learning environment, and up to administrators to provide the needed leadership. *Online Teaching at Its Best* provides practical, real-world advice grounded in educational science to help online instructors, instructional designers, and administrators deliver an exceptional learning experience. Adopt new pedagogical techniques designed specifically for online learning environments Ensure strong course alignment and effective student learning for online classes Increase student retention, build necessary support structures, and train faculty more effectively Integrate research-based course design and cognitive psychology into graduate or undergraduate programs Distance is no barrier to a great education; what do stand in the way are inadequate online course design and implementation and deficient faculty training and support—all of which administrators can mitigate. *Online Teaching at Its Best* will help you ensure that your online classes measure up to the rigor and quality of excellence in teaching and assessment, build in the personal touch for developing a learning community and equip your students to succeed in the next challenge.
