military science textbooks: *Elements of Military Science* Arthur Lockwood Wagner, 2015-06-25 Excerpt from *Elements of Military Science* This little book is intended primarily for the students of such of our colleges as enjoy the services of instructors detailed from the Army. It is intended, therefore, for pupils who are not familiar with that complicated machine, a modern army. Hence an attempt has been made to present plainly and clearly, under the form of question and answer, the main points of the art military. It has been thought best to omit the subject of Strategy, as that is essentially a study for generals rather than for soldiers and subordinate commanders. Resting, as this book does, on Organization and Tactics and The Service of Security and Information, it is thought that the instructor can draw upon these sources for such illustrations, historical and other, as he may think suited to the requirements of his classes. By following this course, the pupil will have before him at all times the essential principles, while their application and illustration will be furnished by his instructor. For the section on Fortifications I am indebted to the Manual of Military Field Engineering, prepared at the United States Infantry and Cavalry School. I wish here to express my thanks to First Lieutenant C. DeW. Willcox, 7th Artillery, for valuable assistance in the preparation of the following pages; indeed, a great part of the preparation of the work has been delegated to him. military science textbooks: *Notes on Military Science and the Art of War* Joseph Mark Califf, 2015-06-02 Excerpt from *Notes on Military Science and the Art of War* These Notes were prepared in an abbreviated form for use in connection with a course of lectures on Military Science and the Art of War, delivered to the Senior Class at the State University of Iowa. The absence of a text-book made something of the kind necessary, and the success that has attended the distribution of hektograph copies of these Notes seems to indicate that they are in the right direction. No attempt has been made in these lectures, which are supplemental to four years of drill, to teach the purely technical part of the military profession. The limited time available for military instruction at colleges indicated to me that the instruction should be broad and general. The aim, therefore, has been to teach these young men how armies are organized and their affairs administered; how men are handled in actual warfare, and how battles are fought; and, in addition, something about the material employed in war - guns, ammunition, torpedoes and explosives: in short, to give them a speaking acquaintance with the Science and Art of War. Nothing especially original is claimed for the subject-matter of the book. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. military science textbooks: Elementary Treatise on Military Science and the Art of War (Classic Reprint) Herbert Everett Tutherly, 2015-08-09 Excerpt from Elementary Treatise on Military Science and the Art of War The following lectures have been prepared as a military science course in the University, to meet the requirements of the theoretical instruction prescribed in General Order No. 93, Adjutant's General's Office, series 1893, for institutions of learning receiving the detail of an Army Officer to act as professor of military science and tactics. The lectures have been prepared upon the assumption that students have drilled one year and have become proficient in infantry drill regulations to include battalion movements, and in artillery drill regulations to include the School of the Cannoneers. These lectures will be bound in three parts, Part I being intended as a text-book for sophomores, Part II for juniors and Part III for seniors. These books may also be found useful to National Guard Officers, and Noncommissioned Officers, as they constitute a progressive course, leading up from armory drill to battle tactics. Preface to Second Edition. In this edition the three parts are bound as one book of 12 chapters for use as a text-book for volunteer troops as well as national guardsmen and military colleges; - it having been suggested by officers who have used the separate parts of the first edition, that the twelve lectures, taken together, afford a complete elementary course for those who are hastily preparing for military service, and just what they need to go with drill regulations. The appendix contains some practical lessons gathered from my recent service with our Army in Cuba. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. military science textbooks: Building Military Science for the Benefit of Society Wolfgang Peischel, Christoph Bilban, 2020-08-03 The present book not only illustrates the ISMS Conference's objectives and presents the contents of the lectures, but also expands on them through further in-depth contributions; the results of academic research carried out on the Conference topic, both across disciplines and ISMS member states, are thus further illuminated. The book intends to provide teachers with a guide to possible developments in the field of military science and students with greater insights into its objectives and principles. The key question is what added value, what kind of USP military science could furnish for society, what specific support not already covered by other scientific disciplines or organizations? If it were only the science of organizing, structuring and commanding armed forces, it would not be necessary to define and establish an independent scientific discipline; the military itself could accomplish all that in the required quality by itself. What would give legitimacy to an independent discipline called Military Science, is a comprehensive (i.e. not only military-strategic) organic collection of primarily intellectual capabilities, safeguarding the secure, long-term survival of the state and its people thus contributing to the benefit of society. In order to increase the publication's academic value and to provide authors with an additional incentive to contribute in future, the book was subjected to a peer review process.

military science textbooks: A Scientific Way of War Ian C. Hope, 2015-08 While faith in the Enlightenment was waning elsewhere by 1850, at the United States Military Academy at West Point and in the minds of academy graduates serving throughout the country Enlightenment thinking persisted, asserting that war was governable by a grand theory accessible through the study of military science. Officers of the regular army and instructors at the military academy and their political superiors all believed strongly in the possibility of acquiring a perfect knowledge of war through the proper curriculum. A Scientific Way of War analyzes how the doctrine of military science evolved from teaching specific Napoleonic applications to embracing subjects that were useful for war in North America. Drawing from a wide array of materials, Ian C. Hope refutes earlier charges of a lack of professionalization in the antebellum American army and an overreliance on the teachings of Swiss military theorist Antoine de Jomini. Instead, Hope shows that inculcation in West Point's American military curriculum eventually came to provide the army with an officer corps that shared a common doctrine and common skill in military problem solving. The proliferation of military science ensured that on the eve of the Civil War there existed a distinctly American, and scientific, way of war.

military science textbooks: Military English, Official Correspondence, Orders, Messages, and Reports for Use in Courses Allied to Instruction in Military Science and Tactics, 1918 (Classic Reprint) Percy Waldron Long, 2017-12-16 Excerpt from Military English, Official Correspondence, Orders, Messages, and Reports for Use in Courses Allied to Instruction in Military Science and Tactics, 1918 IN View of the fact that English Composition has been recognized as one of the courses of training essential to the soldiers and officers of 5th United States Military Forces, it becomes the duty of English teachers to modify their instruction so as to conform to the recommendation made by the War Department Committee on Education in the Special Descriptive Circular on English (c. B. 6 - Sept. Q4). The authors have sought to prepare a brief book to meet the second of the requirements named in the War Department circular drill in correspondence and report writing and their adaptation to the needs of the military organization. The most direct purpose which the book will serve is to teach the soldier student, or prospective officer, how to write the correspondence, orders, messages, and reports which will be required of him, and which he will be called upon to understand even if he does not write them. The book gives instructions, models, and exercises which cover those parts of paperwork which require composition. Throughout the chapters emphasis is laid on the essential features of military language, on clearness, brevity, and precision. The last chapter contains many famous orders which illustrate those qualities of a leader's style which make for the upbuilding of morale. military science textbooks: Soviet Military Doctrine Harriet Fast Scott, William F. Scott, 2019-06-21 The purpose of this book is to document from basic Soviet sources the development of Soviet military doctrine and its impact upon the Soviet Armed Forces. Soviet military doctrine is defined as the military policy of the Communist Party. In one way or another, this policy affects the lives of all of us-as a possible threat to free institutions and political processes as well as to our economic life and well-being. Generally we approach Soviet military policy in terms of military balances and weapons: comparisons in the number of men under arms, the speed of aircraft of the Soviet bloc versus that of NATO aircraft, the number of ballistic missiles and their throw-weights. Studying such balances is of critical importance in defining, to some degree, existing forces. But it is only through a deep and thorough study of the military policy of the Communist Party, which translates directly into military doctrine, that we can obtain the background that might aid in negotiating with the Soviets on arms control matters or in making decisions that will enable those nations outside of the Soviet bloc to deter future Kremlin military moves.
