qc textbooks: The Economics Anti-Textbook Rod Hill, Professor Tony Myatt, 2010-03-11
Mainstream textbooks present economics as an objective science free from value judgements; that settles disputes by testing hypotheses; that applies a pre-determined body of principles; and contains policy prescriptions supported by a consensus of professional opinion. The Economics Anti-Textbook argues that this is a myth - one which is not only dangerously misleading but also bland and boring. It challenges the mainstream textbooks' assumptions, arguments, models and evidence. It puts the controversy and excitement back into economics to reveal a fascinating and a vibrant field of study - one which is more an 'art of persuasion' than it is a science. The Economics Anti-Textbook's chapters parallel the major topics in the typical text, beginning with a boiled-down account of them before presenting an analysis and critique. Drawing on the work of leading economists, the Anti-Textbook lays bare the blind spots in the texts and their sins of omission and commission. It shows where hidden value judgements are made and when contrary evidence is ignored. It shows the claims made without any evidence and the alternative theories that aren't mentioned. It shows the importance of power, social context and legal framework. The Economics Anti-Textbook is the students' guide to decoding the textbooks and shows how real economics is much more interesting than most economists are willing to let on.

qc textbooks: *Teaching Culture in Introductory Foreign Language Textbooks* Carol A. Chapelle, 2016-07-30 This book demonstrates how foreign language textbook analysis can inform future materials development to improve foreign language teaching. Through chronological analysis of French textbooks in the United States, this book explores the representations of Canada and Quebec in French beginner textbooks produced from 1960 to 2010. Chapelle couples a large collection of 65 textbooks with a social-semiotic qualitative analysis of the genres, language and images that communicate Quebec's cultural narrative to learners. Findings about the amount and type of content are presented by decade to track the trends in foreign language teaching and changes in Quebec's representation. Particular attention is given to how language politics is presented to students through text and images. This book will be of interest to scholars of Canadian Studies, Quebec Studies and Second Language Acquisition, as well as foreign language materials developers.

qc textbooks: *Textbooks in Academic Libraries* Chris Diaz, 2018-12-03 Shortly after the syllabi are posted, and long before the beginning of the term, interlibrary loan departments at academic libraries will have filled or rejected innumerable textbook requests. While it would be unwise if not impossible to buy and circulate every textbook at a college or university, there are many academic libraries who are selectively adding textbooks to their collections. And the practice seems to be gaining momentum. In this volume, the Association for Library Collections and Technical Services (ALCTS) and editor Chris Diaz gather case studies that pull together creative approaches and best practices for print textbook reserve programs. This book discusses such topics as results and analysis from a detailed survey of a state university's core-course textbook reserve program; funding sources for starting or piloting a program; using aggregated enrollment, grade, and textbook cost data to identify high impact courses; identifying course-related books that are in the library's collection or fit an existing collection policy; workflow for using bookstore data with ILS and purchasing systems; and using LibGuides and Google Sheets to publicize textbook holdings, and how a back-end database supports discovery for students and reporting for reserves staff. A textbook reserve program can be one way of helping students who are struggling with the high cost of textbooks, and this book spotlights a variety of examples that can be used as models.

qc textbooks: *Famines and the Making of Heritage* Marguérite Corporaal, Ingrid de Zwarte, 2024-06-05 *Famines and the Making of Heritage* is the first book to bring together groundbreaking research on the role of European famines in the nineteenth and twentieth centuries in relation to heritage making, museology, commemoration, education, and monument creation. Featuring contributions from famine experts across Europe and North America, the volume adopts a pioneering transnational perspective, and discusses issues such as contestable and repressed heritage, materiality, dark tourism, education on famines, oral history, multidirectional memory, and visceral empathy. Questioning why educational curricula and practices in schools and on heritage sites are region- or nation-oriented or transnational, chapters also consider whether they emphasise conflict or mutual understanding. Contributions also consider how present issues of European concern – such as globalisation, commodification, human rights, poverty, and migration – intersect with the heritage and memory of modern European famines. Lastly, the book considers what role emigrant and diasporic communities within and outside Europe play in the development of famine heritage and educational practices – and whether famine heritage is accessible to them. *Famines and the Making of Heritage* provides a crucial resource for museum and heritage scholars, students and professionals working on or with difficult or dark heritages, as well as those interested in the study of famines and legacies of troubled pasts.

qc textbooks: High Definition Metrology Based Surface Quality Control and Applications Shichang Du, Lifeng Xi, 2019-10-18 This book provides insights into surface quality control techniques and applications based on high-definition metrology (HDM). Intended as a reference resource for engineers who routinely use a variety of quality control methods and are interested in understanding the data processing, from HDM data to final control actions, it can also be used as a textbook for advanced courses in engineering quality control applications for students who are already familiar with quality control methods and practices. It enables readers to not only assimilate the quality control methods involved, but also to quickly implement the techniques in practical engineering problems. Further, it includes numerous case studies to highlight the implementation of the methods using measured HDM data of surface features. Since MATLAB is extensively employed in these case studies, familiarity with this software is helpful, as is a general understanding of surface quality control methods.

qc textbooks: Work, Mobility, and Participation Robert E. Cole, 2024-06-28 At a minimum our goal is to develop a better understanding of Japanese labor market practices and work organization and in so doing develop a more enlightened vision of American practices. We will greatly enhance our ability to achieve both these goals by arriving at a better understanding of the comparative experience of the two nations over time. We can no longer afford the delusion that what exists in the United States reflects the characteristics of industrial society in its most advanced form. Yet to follow current fashion in simply denying that the United States is the very model of a modern society, while advocating that we imitate the Japanese, is to take a course filled with its own pitfalls. Perhaps it is time we accepted the fact that the social scientist's intense commitment to generalization cannot be allowed to obscure the fundamental observation that nations develop along their own paths, based on their own political, cultural, economic and social histories. As nations industrialize there is undoubtedly convergence in important institutional spheres, such as the expansion of education, the adoption of common technologies and determinants of labor mobility. Certainly nations can learn from one another, and indeed some nations impose their will on other nations. Yet there are also unique solutions to common problems. —From the Introduction This title is part of UC Press's Voices Revived program, which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice, reach, and impact. Drawing on a backlist dating to 1893, Voices Revived makes high-quality, peer-reviewed scholarship accessible once again using print-on-demand technology. qc textbooks: What is Québécois Literature? Rosemary Chapman, 2013-08-30 An Open Access edition of this book is available on the Liverpool University Press website and the OAPEN library. The question 'What is Québécois literature?' may seem innocent and answerable, yet Rosemary Chapman's compelling study shows that to answer it is to chart the cultural history of French Canada, to put francophone writing in Canada in postcolonial context and to ask whether literary history, with its focus on the nation, is in fact obsolete. This remarkable book will be compulsory reading for scholars well-versed in francophone postcolonial studies and will also act as an ideal introduction for Anglophone scholars of Canadian literature.

qc textbooks: *Frontiers in Statistical Quality Control 6* Hans-Joachim Lenz, Peter-Theodor Wilrich, 2012-12-06 In the 1920's, Walter Shewhart visualized that the marriage of statistical methods and manufacturing processes would produce reliable and consistent quality products. Shewhart (1931) conceived the idea of statistical process control (SPC) and developed the well-known and appropriately named Shewhart control chart. However, from the 1930s to the 1990s, literature on SPC schemes have been captured by the Shewhart paradigm of normality, independence and homogeneous variance. When in fact, the problems facing today's industries are more inconsistent than those faced by Shewhart in the 1930s. As a result of the advances in machine and sensor technology, process data can often be collected on-line. In this situation, the process observations that result from data collection activities will frequently not be serially independent, but autocorrelated. Autocorrelation has a significant impact on a control chart: the process may not exhibit a state of statistical control when in fact, it is in control. As the prevalence of this type of data is expected to increase in industry (Hahn 1989), so does the need to control and monitor it. Equivalently, literature has reflected this trend, and research in the area of SPC with autocorrelated data continues so that effective methods of handling correlated data are available. This type of data regularly occurs in the chemical and process industries, and is pervasive in computer-integrated manufacturing environments, clinical laboratory settings and in the majority of SPC applications across various manufacturing and service industries (Alwan 1991).
