sites to sell college textbooks: A History of the Book in America David Paul Nord, Joan Shelley Rubin, Michael Schudson, 2015-12-01 The fifth volume of A History of the Book in America addresses the economic, social, and cultural shifts affecting print culture from World War II to the present. During this period factors such as the expansion of government, the growth of higher education, the climate of the Cold War, globalization, and the development of multimedia and digital technologies influenced the patterns of consolidation and diversification established earlier. The thirty-three contributors to the volume explore the evolution of the publishing industry and the business of bookselling. The histories of government publishing, law and policy, the periodical press, literary criticism, and reading--in settings such as schools, libraries, book clubs, self-help programs, and collectors' societies--receive imaginative scrutiny as well. The Enduring Book demonstrates that the corporate consolidations of the last half-century have left space for the independent publisher, that multiplicity continues to define American print culture, and that even in the digital age, the book endures. sites to sell college textbooks: Values and Technology Gabriel R. Ricci, 2017-09-08 In 1749 Jean-Jacques Rousseau's Discourse on the Arts and Sciences, surprised leading Enlightenment thinkers who had enthusiastically upheld the positive benefits of humanity's technological advance. Voltaire, who celebrated the ends of civilization, mocked Rousseau's praise for an original creative state of nature in which man enjoyed an optimum level of freedom. Given the unprecedented intrusion of technology into our lives, the question raised by Rousseau's critique may be even more pertinent. In this volume of Religion and Public Life contributors address some of the challenges to conventional morality brought on by the technological augmentation of the social structure. John Barker's essay explores how Luciano Floridi's philosophy of technology has complicated the conventional way of determining what ought to receive moral consideration. Fani Zlatarova provides a practical guide for incorporating ethical components into teaching computer technology. Grant Havers explores the controversies surrounding the biogenetic explosion through an examination of the competing philosophical perspectives and Christopher Vassilopolos examines the science-based justification for taking life. Gabriel R. Ricci looks at recent political history in the United States in order to highlight the sometimes uneasy relationship between science and social policy. Volume 37 is a welcome addition to the acclaimed Religion and Public Life series.
