steps to wellbeing workbooks: Ready, Set, Go! Sandra Rasmussen, 2015-02-10 This book is for people in recovery. We ask and answer basic questions about addiction, relapse, and recovery. We believe addiction is a primary, chronic disease of brain reward, motivation, memory, and related circuitry, characterized by craving, loss of control, physical dependence, and tolerance. Genetics, together with bio-psycho-social-spiritual factors, account for the likelihood a person will develop an addiction or related disorder. Relapse happens: a return to drinking, using, other addictive behavior, or an increase in harm from addiction. Yet, recovery is an idea whose time has come. Recovery is a different, better way of life with purpose and meaning. We suggest addiction management as a way recovering people can maintain change (abstinence or harm reduction), reduce risks for relapse, prevent relapse, develop a recovery lifestyle, confront relapse when necessary, and achieve well-being. Current research, recognized theories, and the lived experiences of hundreds of people in recovery ground and guide book content. The book has three parts and fifteen chapters. A person in recovery introduces each chapter. We show how to develop, implement, and evaluate addiction management plans. Each chapter ends with summary statements and addiction management applications. References and a list of websites complete the book. Family and friends of recovering

people will find the material useful. Addiction professionals can use the book to help clients realize recovery and prevent relapse. Are you ready? Get set. Go!

steps to wellbeing workbooks: Reflection in CBT Beverly Haarhoff, Richard Thwaites, 2015-11-09 Developing skills and competency in CBT is a complex process of which self-observation and self-reflection are an essential part. In this new book, leading figures Beverly Haarhoff and Richard Thwaites outline the rationale for a focus on self-reflective practice in CBT, before offering practical and accessible guidelines demonstrating how this can be achieved in training and practice. Highlighting relevant research throughout and using case studies to illustrate theory in practice, ten chapters consider: - reflection in training and in supervision and self-supervision, - reflecting on the therapeutic relationship, on our sociocultural perceptions and biases and on client feedback - how reflection is vital to self-care and to becoming a better therapist, supervisor and trainer. This is an essential read for trainees in both high and low intensity CBT programmes, those on broader CBT courses, and for qualified practitioners working independently to enhance their self-reflective capacity.

steps to wellbeing workbooks: Interprofessional Approaches for the Management of Chronic Diseases Alberto Marcos Heredia-Rizo, Maria Jesus Casuso-Holgado, Javier Martinez-Calderon, Emma K. Ho, 2024-09-30 Chronic diseases represent the leading causes of death and disability worldwide, with a subsequent enormous socioeconomic burden. The clinical management of these conditions often requires a multidisciplinary approach to treat the complex symptoms related to the disease and the associated problems. Different healthcare systems have been experimenting with interprofessional collaboration to enhance professional effectiveness and quality of practice among professionals, in an environment often constrained by resources. The optimum use of resources is made possible by interprofessional collaboration, which is described as an integrative cooperation of many health professions in different health disciplines, including medicine, nursing, physical therapy, psychology, and occupational therapy. It has been demonstrated that interprofessional care improves patient outcomes by lowering the rate of preventable adverse drug reactions, morbidity, and mortality, and optimising prescription dosages. However, despite the increasing evidence on the positive impact of integrative multidisciplinary programs for people with chronic diseases, there are still gaps and challenges in how to translate evidence-based knowledge into well-informed clinical practice. The aim of this Research Topic is to explore the current status and future direction of interprofessional care teams. We are open to receiving articles that explore interprofessional collaboration in the context of various clinical diagnoses, including; chronic pain, cancer, neurological ailments, psychiatric problems, or cardiorespiratory conditions. Also, the effects of new health technologies on interprofessional collaboration, such as virtual reality, mobile health apps, or telecare.

The sudden and devastating collapse of his mental health led to his medical retirement from the police force, the end of his marriage and, eventually, his attempted suicide. But in adversity, it is also possible to find opportunity: Craig's diagnosis of a severe depressive disorder ultimately forced him to seek help, reassess and commit to making his mental health a lifetime priority. It is still difficult for many people to acknowledge that they are struggling to cope, particularly in jobs with a culture of toughness, where resilience is a given: first responders, the military, miners, construction workers. Craig was one of those people, and this down-to-earth, accessible and honest book distils everything he learned during his own mental health journey. Drawing on his own experiences - along with his skills in leadership, effective communication, emotional intelligence and conflict resolution - Craig provides a path for those finding it difficult to make that first step towards recovery from stress and trauma.
