ufli workbooks: *Evaluating the Effects of the University of Florida Literacy Initiative (UFLI) on the Reading Skills of Spanish-speaking English Language Learners* Stephanie Liset Arriaza de Allen, 2010 ABSTRACT: Many English language learners (ELLs) in schools experience reading difficulties, particularly Spanish-speaking students. This is a serious problem given the tendency for struggling readers to fall further behind as they advance in school. This issue becomes more pressing as the number of ELLs enrolled in schools rises and the availability of native language instruction diminishes. Fortunately, there is evidence that English reading interventions that have proven to be effective for struggling native English speakers are also effective for ELLs with different levels of English oral proficiency. Given that the literature is scarce, it is important to investigate the impact of other reading interventions on the reading outcomes of ELLs. The purpose of this study was to examine the effectiveness of a modified version of the University of Florida Literacy Initiative tutoring program in promoting the reading skills of second-grade Spanish-speaking ELLs who are struggling to read. The program was modified to include small-group instruction and practices that supported the language needs of ELLs.

ufli workbooks: *An Observational Study of Student Reading Engagement During UFLI Intensive Intervention* Fang Xu, 2023 high level of reading engagement during UFLI Intensive tutoring, with a low level of disengaged behaviors associated with tutors instructions, interruptions from the surrounding environment, and other confounding factors. Furthermore, statistically significant differences were found in student initiation and responding to initial requests under the student reading engagement category across four activities. The results from follow-up dependent samples t-tests showed student initiation increased and responding to initial requests decreased significantly in the regular word spelling activity than in the visual drill condition. Additionally, increases in student initiation were also found in the auditory drill and the blending drill conditions compared to the visual drill condition, separately. The implications for future research, professional development opportunities, and practitioners instructional practices to improve student reading engagement were discussed. Limitations and conclusions were provided at the end of the paper.
