thoughts and feelings without judgment. They provide exercises in meditation, breathing techniques, and stress management strategies to promote relaxation and emotional regulation.

workbooks for adults mental health: Low-Cost Approaches to Promote Physical and Mental Health Luciano L'Abate, 2007-06-06 Most physical and mental health professionals will agree that their time, space, and funds are generally in short supply, even under optimal conditions. Overburdened mental health facilities are trying to cope with limited budgets and overworked and underpaid personnel. *Low-Cost Approaches to Promote Physical and Mental Health* addresses both sides of this shortfall by offering either self-administered or easily administered verbal and non-verbal interventions designed to promote positive health behaviors while requiring little or no outside funding. Editor Luciano L'Abate continues his long tradition of prolific innovations by identifying major changes in today's health care systems and explaining how targeted, prescriptive promotion/prevention strategies can enhance traditional primary, secondary, and tertiary interventions in key behavioral and relational areas: - Nutrition: weight/obesity control, diets, meal planning, vitamins and minerals, herbal supplements - Exercise, expressive movement, relaxation, meditation, and mindfulness - Writing for mental health promotion, from structured

protocols/workbooks to less structured focused, expressive, and guided writing, including diaries and autobiographies - Sex, sexuality, affection, intimacy and fear of intimacy - Mother/child bonding as well as couple and family togetherness - Spirituality and forgiveness in dealing with inevitable life hurts and disappointments - Friendships and support groups - Plus leading-edge interventions, including emotional intelligence, animal companionship, and computer technology Reviews of each promotional approach are engaging, effective, and consistent with standard psychological practice for lasting results, either away from or in addition to non-clinical and clinical settings (schools, hospitals, senior/citizen centers, etc.). workbooks for adults mental health: *Clinical Psychology and Psychotherapy as a Science* Luciano L'Abate, 2012-08-28 This book demonstrates how clinical psychology and psychotherapy practices may reach a scientific level provided they change the three basic paradigms that have controlled those practices in the last century. These three, now outdated, paradigms, are: (1) one-on-one (2) personal contacts (3) through talk. These paradigms have served well in the past but they are no less helpful in the current digitally focused world.

Russell Ramsay, 2024-05-01 Dealing with adult attention-deficit hyperactivity disorder (ADHD) can be a huge challenge in itself. workbooks for adults mental health: *Concreteness and Specificity in Clinical Psychology* Luciano L'Abate, 2015-04-10 This provocative volume updates L'Abate's signature

ideas, focusing in particular on the concepts of concreteness and specificity as basic tenets of evaluation and therapy. Noting society's growing familiarity with technology, current concerns about treatment accessibility, and widespread interest in wellness promotion, he argues for remote-writing exercises targeted to specific client issues and monitored by the clinician instead of relying on traditional talk-based therapy. This attention to concreteness and specificity in baseline evaluation, post-treatment evaluation, and follow-up, the author asserts, is central to making treatment replicable, less subject to impasses or missteps, and more professional, with the potential of changing how therapy is conducted as well as how clinicians are trained and practice. The book's framework includes rationales, models, empirical data, and examples of prescriptive remote-writing exercises. Featured in the coverage: Online interventions: here to stay and to grow. Verifiability in clinical psychology practices. Present status and future perspectives for personality and family assessment. Practice without theory/combining theory with practice. Toward a unifying framework of human relationships PIPES: Programmed Interactive Practice Exercise and Prescriptions. Concreteness and Specificity in Clinical Psychology will bring a new level of discussion and debate among clinical psychology practitioners and practicing psychotherapists in private practice and the public sector.

workbooks for adults mental health: *The Family Systems Test (FAST)* Thomas M. Gehring, Marianne Debry, Peter K. Smith, 2013-02-01 The Family System Test (FAST), developed by Thomas M. Gehring, is an important new tool for investigating family relations. Based on the structural-systemic theory of families, it is a figural technique for representing emotional bonds (cohesion) and hierarchical structures in the family or similar social systems. In this unique volume, the editors draw on current theory and research in family or similar social systems together with a variety of empirical studies that have used the FAST, to provide a comprehensive overview and assessment of the test and its use in various clinical research contexts. The book is divided into four sections, each focusing on a different aspect of the FAST. Part 1 describes the concepts and psychometric properties of the FAST within the context of theoretically and empirically relevant aspects of the field of family psychology as a whole. Special emphasis is given to systematic-structural approaches to assessing individual and family functioning. Part II focuses on the use of the FAST in developmental research. For example, the the FAST has been used to show how family constructs are influenced by age, type of family and situation. Part III deals with cross-cultural issues and compares the interpersonal constructs of Japanese and Chinese families to Western families. Finally, Part IV addresses the applications of the FAST in clinical setting - in

diagnosis of biopsychosocial problems and planning and evaluation of clinical interventions. The result is a book that helps to bridge the gap between theory, practice and research. It will be essential reading for users of the FAST and all clinicians and researchers who work in family relations and development.
